

NICOLAS BOURBAKI
ELEMENTS OF MATHEMATICS

Theory of Sets

 Springer

CONTENTS

TO THE READER	v
CONTENTS OF THE ELEMENTS OF MATHEMATICS SERIES	vii
INTRODUCTION	7
CHAPTER I. DESCRIPTION OF FORMAL MATHEMATICS	15
§ 1. Terms and relations	15
1. Signs and assemblies	15
2. Criteria of substitution	18
3. Formative constructions	19
4. Formative criteria	21
§ 2. Theorems	24
1. The axioms	24
2. Proofs	25
3. Substitutions in a theory	26
4. Comparison of theories	26
§ 3. Logical theories	28
1. Axioms	28
2. First consequences	29
3. Methods of proof	30
4. Conjunction	33
5. Equivalence	34
§ 4. Quantified theories	36
1. Definition of quantifiers	36
2. Axioms of quantified theories	37
3. Properties of quantifiers	38
4. Typical quantifiers	41

CONTENTS

§ 5. Equalitarian theories	44
1. The axioms	44
2. Properties of equality	45
3. Functional relations	47
Appendix. Characterization of terms and relations	50
1. Signs and words	50
2. Significant words	51
3. Characterization of significant words	51
4. Application to assemblies in a mathematical theory ..	53
Exercises for § 1	56
Exercises for § 2	56
Exercises for § 3	57
Exercises for § 4	58
Exercises for § 5	59
Exercises for the Appendix	60
CHAPTER II. THEORY OF SETS	65
§ 1. Collectivizing relations	65
1. The theory of sets	65
2. Inclusion	66
3. The axiom of extent	67
4. Collectivizing relations	67
5. The axiom of the set of two elements	69
6. The scheme of selection and union	69
7. Complement of a set. The empty set	71
§ 2. Ordered pairs	72
1. The axiom of the ordered pair	72
2. Product of two sets	74
§ 3. Correspondences	75
1. Graphs and correspondences	75
2. Inverse of a correspondence	78
3. Composition of two correspondences	78
4. Functions	81
5. Restrictions and extensions of functions	82
6. Definition of a function by means of a term	83
7. Composition of two functions. Inverse function	84

8. Retractions and sections	86
9. Functions of two arguments	89
§ 4. Union and intersection of a family of sets	90
1. Definition of the union and the intersection of a family of sets	90
2. Properties of union and intersection	93
3. Images of a union and an intersection	94
4. Complements of unions and intersections	96
5. Union and intersection of two sets	96
6. Coverings	98
7. Partitions	99
8. Sum of a family of sets	100
§ 5. Product of a family of sets	101
1. The axiom of the set of subsets	101
2. Set of mappings of one set into another	102
3. Definitions of the product of a family of sets	103
4. Partial products	105
5. Associativity of products of sets	106
6. Distributivity formulae	107
7. Extension of mappings to products	111
§ 6. Equivalence relations	112
1. Definition of an equivalence relation	113
2. Equivalence classes; quotient set	114
3. Relations compatible with an equivalence relation	116
4. Saturated subsets	117
5. Mappings compatible with equivalence relations	118
6. Inverse image of an equivalence relation; induced equivalence relation	119
7. Quotients of equivalence relations	119
8. Product of two equivalence relations	120
9. Classes of equivalent objects	121
Exercises for § 1	123
Exercises for § 2	123
Exercises for § 3	124
Exercises for § 4	125
Exercises for § 5	127
Exercises for § 6	127

7.3.10 The Final Reduction	370
7.4 Historical Remarks	374
8. Other Decidable Cases	377
8.1 First-Order Logic with Two Variables	377
8.2 Unification and Applications to the Decision Problem	382
8.2.1 Unification	382
8.2.2 Herbrand Formulae	387
8.2.3 Positive First-Order Logic	388
8.3 Decidable Classes of Krom Formulae	390
8.3.1 The Chain Criterion	390
8.3.2 The Aanderaa-Lewis Class	393
8.3.3 The Maslov Class	400
8.4 Historical Remarks	404
A. Appendix: Tiling Problems	407
A.1 Introduction	407
A.2 The Origin Constrained Domino Problem	408
A.3 Robinson's Aperiodic Tile Set	410
A.4 The Unconstrained Domino Problem	414
A.5 The Periodic Problem and the Inseparability Result	419
Annotated Bibliography	421
Index	477

4. Finite sequences	175
5. Characteristic functions of sets	175
6. Euclidean division	176
7. Expansion to base b	177
8. Combinatorial analysis	179
§ 6. Infinite sets	183
1. The set of natural integers	183
2. Definition of mappings by induction	184
3. Properties of infinite cardinals	186
4. Countable sets	188
5. Stationary sequences	189
§ 7. Inverse limits and direct limits	191
1. Inverse limits	191
2. Inverse systems of mappings	192
3. Double inverse limit	196
4. Conditions for an inverse limit to be non-empty	198
5. Direct limits	201
6. Direct systems of mappings	204
7. Double direct limit. Product of direct limits	209
Exercises for § 1	212
Exercises for § 2	221
Exercises for § 3	229
Exercises for § 4	230
Exercises for § 5	235
Exercises for § 6	241
Exercises for § 7	251
Historical Note on § 5	255
Bibliography	257
CHAPTER IV. STRUCTURES	259
§ 1. Structures and isomorphisms	259
1. Echelons	259
2. Canonical extensions of mappings	260
3. Transportable relations	261
4. Species of structures	262
5. Isomorphisms and transport of structures	264

CONTENTS

6. Deduction of structures	266
7. Equivalent species of structures	268
§ 2. Morphisms and derived structures	271
1. Morphisms	271
2. Finer structures	273
3. Initial structures	274
4. Examples of initial structures	276
5. Final structures	280
6. Examples of final structures	281
§ 3. Universal mappings	283
1. Universal sets and mappings	283
2. Existence of universal mappings	284
3. Examples of universal mappings	286
Exercises for § 1	289
Exercises for § 2	290
Exercises for § 3	294
Historical Note on Chapters I-IV	296
Bibliography	343
SUMMARY OF RESULTS	347
Introduction	347
§ 1. Elements and subsets of a set	347
§ 2. Functions	351
§ 3. Products of sets	357
§ 4. Union, intersection, product of a family of sets	363
§ 5. Equivalence relations and quotient sets	370
§ 6. Ordered sets	373
§ 7. Powers. Countable sets	380
§ 8. Scales of sets. Structures	383
Index of notation	387
Index of terminology	392
Axioms and schemes of the theory of sets	414
