

TEMPERATURES
VERY LOW
and
VERY HIGH

MARK W. ZEMANSKY

Professor Emeritus of Physics
The City College of New York

Dover Publications, Inc.
New York

Table of Contents

Preface	v
1 Temperature Is a Property of Matter	1
<i>The Concept of Temperature, 1; Thermometers, 5; The Establishment of a Temperature Scale, 9; The International Temperature Scale, 15; Heat, a Form of Energy, 16; Isothermal and Adiabatic Processes, 18; The Kelvin Temperature Scale, 21</i>	
2 Temperature, Entropy, and Disorder	25
<i>Energy and Entropy, 25; The Molecular Point of View, 29</i>	
3 The Approach to Absolute Zero	37
<i>The Joule-Kelvin Effect, 37; In the Liquid Helium Region, 41; Paramagnetic Salts, 46; Adiabatic Demagnetization, 50; Conversion of Magnetic Temperature to Kelvin Temperature, 55; Superconductivity, 58; Magnetic Refrigerator, 64; The Polarization of Magnetic Nuclei, 64; Production of Still Lower Temperatures by Nuclear Demagnetization, 69; The Third Law of Thermodynamics, 73</i>	
4 The Approach to Infinite Temperature	77
<i>Filaments, Furnaces, and Flames, 77; Planck's Radiation Law and the Optical Pyrometer, 79; Arcs and Plasmas, 86; Spectral Lines, 90; Shock Waves, 100; Fission of Uranium, 105; Fusion Reactions, 107</i>	
5 Beyond Infinity to Negative Temperatures	112
<i>Subsystems, 112; Negative Values of the Kelvin Temperature, 114; Achievement of Negative Temperatures, 118; Thermodynamics at Negative Temperatures, 120</i>	
Bibliography	123
Index	125

Plates (following p. 88)

- I The famous electromagnet of the Laboratoire Aimé Cotton at Bellevue, near Paris
- II Apparatus used at Oxford for the production of temperatures in the microdegree range
- III Plasma jet in nitrogen
- IV Mach-Zehnder fringes, showing three stages in the formation of a shock wave
