Chichester · New York · Brisbane · Toronto · Singapore

Contents

Preface to Second Edition	vii
From the Preface to First Edition	ix
Table of interdependence of chapters	xv
1 Sets and mappings	
1.1 The need for logic	1
1.2 Sets	8
1.3 Mappings	12
1.4 Equivalence relations	17
1.5 Ordered sets	19
Further exercises	21
2 Integers and rational numbers	
2.1 The integers	22
2.2 Divisibility and factorization in $\mathbf{Z}$	26
2.3 Congruences	30
2.4 The rational numbers and some finite fields	37
Further exercises	39
3 Groups	
3.1 Monoids	42
3.2 Groups; the axioms	45
3.3 Group actions and coset decompositions	51
3.4 Cyclic groups	56
3.5 Permutation groups	58
3.6 Symmetry	63
Further exercises	67
4 Vector spaces and linear mappings	
4.1 Vectors and linear dependence	70
4.2 Linear mappings	74
4.3 Bases and dimension	76
4.4 Direct sums and quotient spaces	81
4.5 The space of linear mappings	86

4.6	Change of basis	93
4.7	The rank	96
4.8	Affine spaces	101
4.9	Category and functor	104
	Further exercises	110
5	Linear equations	
5.1	Systems of linear equations	112
5.2	Elementary operations	115
5.3	Linear programming	120
5.4	PAQ-reduction and the inversion of matrices	129
5.5	Block multiplication	132
	Further exercises	134
6	Rings and fields	
6.1	Definition and examples	136
6.2	The field of fractions of an integral domain	140
6.3	The characteristic	145
6.4	Polynomials	147
6.5	Factorization	153
6.6	The zeros of polynomials	161
6.7	The factorization of polynomials	164
6.8	Derivatives	168
6.9	Symmetric and alternating functions	177
	Further exercises	182
7	Determinants	
7.1	Definition and basic properties	186
7.2	Expansion of a determinant	194
7.3	The determinantal rank	199
7.4	The resultant	201
	Further exercises	205
8	Quadratic forms	
8.1	Bilinear forms and pairings	208
8.2	Dual spaces	211
8.3	Inner products; quadratic and hermitian forms	216
8.4	Euclidean and unitary spaces	224
8.5	Orthogonal and unitary matrices	230
8.6	Alternating forms	241

Further exercises	245
9 Further group theory.	
9.1 The isomorphism theorems	249
9.2 The Jordan–Hölder theorem	255
9.3 Groups with operators	259
9.4 Automorphisms	263
9.5 The derived group; soluble groups and simple groups	266
9.6 Direct products	272
9.7 Abelian groups	279
9.8 The Sylow theorems	287
9.9 Generators and defining relations; free groups	292
Further exercises	298
10 Rings and modules	
10.1 Ideals and quotient rings	301
10.2 Modules over a ring	304
10.3 Direct products and direct sums	311
10.4 Free modules	314
10.5 Principal ideal domains	318
10.6 Modules over a principal ideal domain	326
Further exercises	332
11 Normal forms for matrices	
11.1 Eigenvalues and eigenvectors	335
11.2 The $k[x]$ -module defined by an endomorphism	339
11.3 Cyclic endomorphisms	344
11.4 The Jordan normal form	347
11.5 The Jordan normal form: another method	352
11.6 Normal matrices	356
11.7 Linear algebras	358
Further exercises	360
Solutions to the exercises	362
Appendices	
1 Further reading	400
2 Some frequently used notations	401
Index	403
