# Burgers-KPZ Turbulence

## Göttingen Lectures

Springer

# Contents

<b>Lecture 1. Shock Waves and Large Scale Structure (LSS) of the Universe</b>	<b>1</b>
1.1 Nonlinear waves, shock formation, conservation laws . . . . .	1
1.2 Large scale structure of the Universe and the adhesion approximation . . . . .	5
1.3 KPZ equation of interface growth and other physical models leading to Burgers equation . . . . .	9
<b>Lecture 2. Hydrodynamic Limits, Nonlinear Diffusions, Propagation of Chaos</b>	<b>13</b>
2.1 Random walks and linear diffusions . . . . .	13
2.2 Hydrodynamic limit for asymmetric exclusion particle systems . . . . .	18
2.3 Interacting and nonlinear diffusions, propagation of chaos	22
<b>Lecture 3. Hopf-Cole Formula and Its Asymptotic Analysis</b>	<b>25</b>
3.1 Elementary, traveling wave and self-similar solutions . . . . .	25
3.2 The Hopf-Cole formula and exact solutions . . . . .	29
3.3 Asymptotic analysis of the Hopf-Cole formula in the inviscid limit . . . . .	33
3.4 KdV equation and solitons . . . . .	39
<b>Lecture 4. Statistical Description, Parabolic Approximation</b>	<b>43</b>
4.1 Statistical description in Burgers turbulence . . . . .	43
4.2 Polynomial chaos and Wiener-Hermite expansions of nonlinear functionals . . . . .	45

4.3 Parabolic scaling limits for regular initial data . . . . .	54
4.4 The maximum energy principle for unimodal data . . . . .	64
4.5 Parabolic scaling limits for singular initial data . . . . .	71
4.6 Spectral properties of scaling limits for singular initial data . . . . .	86
<b>Lecture 5. Hyperbolic Approximation and the Inviscid Limit</b>	<b>97</b>
5.1 Hyperbolic scaling limit . . . . .	97
5.2 Densities and correlations of the limit velocity field . . . . .	105
5.3 Statistics of shocks . . . . .	108
5.4 Sinai's theorem—Hausdorff dimension of shock points . . . . .	115
5.5 Voronoi tessellation of shock fronts in $\mathbb{R}^d$ . . . . .	131
<b>Lecture 6. Forced Burgers Turbulence</b>	<b>135</b>
6.1 Stationary regimes . . . . .	135
6.2 Least-action principle . . . . .	141
6.3 Inviscid limit and multistream regimes . . . . .	147
6.4 Statistical characteristics . . . . .	159
6.5 Stream number statistics for a 1-D gas of noninteracting particles . . . . .	166
6.6 Mechanism of energy dissipation in the inviscid 1-D Burgers turbulence . . . . .	169
6.7 Variational methods . . . . .	172
6.8 Quasi-Voronoi tessellation of shock fronts . . . . .	182
6.9 White noise forcing: existence and Feynman-Kac formula issues . . . . .	192
<b>Lecture 7. Passive Tracer Transport in Burgers' and Related Flows</b>	<b>203</b>
7.1 Burgers' turbulent diffusion; stochastic interpretation . . . . .	203
7.2 2-D cellular structures . . . . .	213
7.3 Evolution of 1-D model density . . . . .	222
7.4 KdV-Burgers' transport in 1-D compressible gas . . . . .	225
7.5 Exact formulas for 1-D Burgers' turbulent diffusion . . . . .	233
7.6 Fourier-Lagrangian representation for non-smooth Lagrangian-Eulerian maps . . . . .	239
7.7 Concentration field in reacting Burgers' flows . . . . .	248
7.8 Concentration field in potential and rotational flows . . . . .	260
7.9 Burgers' density field revisited . . . . .	262

<b>7.10 Generalized variational principles for systems of conservation laws . . . . .</b>	<b>267</b>
<b>Lecture 8. Fractal Burgers-KPZ Models . . . . .</b>	<b>271</b>
8.1 Existence and uniqueness problems . . . . .	271
8.2 Time decay of solutions . . . . .	284
8.3 Traveling wave and self-similar solutions . . . . .	285
8.4 Fractal nonlinear Markov processes and propagation of chaos . . . . .	293
<b>Bibliography . . . . .</b>	<b>299</b>
<b>Index . . . . .</b>	<b>317</b>
