Preface	xv
CHAPTER 1. Measure and Integration	1
1.1 Introduction	1
1.2 Basic notions of measure theory	4
1.3 Monotone class theorem	9
1.4 Uniqueness of measures	11
1.5 Definition of measurable functions and integrals	12
1.6 Monotone convergence	17
1.7 Fatou's lemma	18
1.8 Dominated convergence	19
1.9 Missing term in Fatou's lemma	21
1.10 Product measure	23
1.11 Commutativity and associativity of product measures	24
1.12 Fubini's theorem	25
1.13 Layer cake representation	26
1.14 Bathtub principle	28
1.15 Constructing a measure from an outer measure	29
Exercises	32
CHAPTER 2. L^p-Spaces	35
2.1 Definition of L^p -spaces	35

2.2 Jensen's inequality	38
2.3 Hölder's inequality	39
2.4 Minkowski's inequality	41
2.5 Hanner's inequality	43
2.6 Differentiability of norms	44
2.7 Completeness of L^p -spaces	45
2.8 Projection on convex sets	47
2.9 Continuous linear functionals and weak convergence	48
2.10 Linear functionals separate	50
2.11 Lower semicontinuity of norms	51
2.12 Uniform boundedness principle	52
2.13 Strongly convergent convex combinations	54
2.14 The dual of $L^p(\Omega)$	55
2.15 Convolution	57
2.16 Approximation by C^∞ -functions	58
2.17 Separability of $L^p(\mathbb{R}^n)$	61
2.18 Bounded sequences have weak limits	62
2.19 Approximation by C_c^∞ -functions	63
2.20 Convolutions of functions in dual $L^p(\mathbb{R}^n)$ -spaces are continuous	64
2.21 Hilbert-spaces	64
Exercises	69
CHAPTER 3. Rearrangement Inequalities	71
3.1 Introduction	71
3.2 Definition of functions vanishing at infinity	72
3.3 Rearrangements of sets and functions	72
3.4 The simplest rearrangement inequality	74
3.5 Nonexpansivity of rearrangement	75
3.6 Riesz's rearrangement inequality in one-dimension	76
3.7 Riesz's rearrangement inequality	79
3.8 General rearrangement inequality	85
3.9 Strict rearrangement inequality	85
Exercises	87

CHAPTER 4. Integral Inequalities	89
4.1 Introduction	89
4.2 Young's inequality	90
4.3 Hardy–Littlewood–Sobolev inequality	98
4.4 Conformal transformations and stereographic projection	102
4.5 Conformal invariance of the Hardy–Littlewood–Sobolev inequality	106
4.6 Competing symmetries	109
4.7 Proof of Theorem 4.3: Sharp version of the Hardy–Littlewood–Sobolev inequality	111
4.8 Action of the conformal group on optimizers	112
Exercises	113
CHAPTER 5. The Fourier Transform	115
5.1 Definition of the L^1 Fourier transform	115
5.2 Fourier transform of a Gaussian	117
5.3 Plancherel's theorem	118
5.4 Definition of the L^2 Fourier transform	119
5.5 Inversion formula	120
5.6 The Fourier transform in $L^p(\mathbb{R}^n)$	120
5.7 The sharp Hausdorff–Young inequality	121
5.8 Convolutions	122
5.9 Fourier transform of $ x ^{\alpha-n}$	122
5.10 Extension of 5.9 to $L^p(\mathbb{R}^n)$	123
Exercises	125
CHAPTER 6. Distributions	127
6.1 Introduction	127
6.2 Test functions (The space $\mathcal{D}(\Omega)$)	128
6.3 Definition of distributions and their convergence	128
6.4 Locally summable functions, $L^p_{\text{loc}}(\Omega)$	129
6.5 Functions are uniquely determined by distributions	130
6.6 Derivatives of distributions	131
6.7 Definition of $W^{1,p}_{\text{loc}}(\Omega)$ and $W^{1,p}(\Omega)$	132

6.8 Interchanging convolutions with distributions	134
6.9 Fundamental theorem of calculus for distributions	135
6.10 Equivalence of classical and distributional derivatives	136
6.11 Distributions with zero derivatives are constants	138
6.12 Multiplication and convolution of distributions by C^∞ -functions	138
6.13 Approximation of distributions by C^∞ -functions	139
6.14 Linear dependence of distributions	140
6.15 $C^\infty(\Omega)$ is 'dense' in $W_{loc}^{1,p}(\Omega)$	141
6.16 Chain rule	142
6.17 Derivative of the absolute value	144
6.18 Min and Max of $W^{1,p}$ -functions are in $W^{1,p}$	145
6.19 Gradients vanish on the inverse of small sets	146
6.20 Distributional Laplacian of Green's functions	148
6.21 Solution of Poisson's equation	149
6.22 Positive distributions are measures	151
Exercises	155
CHAPTER 7. The Sobolev Spaces H^1 and $H^{1/2}$	157
7.1 Introduction	157
7.2 Definition of $H^1(\Omega)$	157
7.3 Completeness of $H^1(\Omega)$	158
7.4 Multiplication by functions in $C^\infty(\Omega)$	159
7.5 Remark about $H^1(\Omega)$ and $W^{1,2}(\Omega)$	160
7.6 Density of $C^\infty(\Omega)$ in $H^1(\Omega)$	160
7.7 Partial integration for functions in $H^1(\mathbb{R}^n)$	161
7.8 Convexity inequality for gradients	163
7.9 Fourier characterization of $H^1(\mathbb{R}^n)$	165
7.10 $-\Delta$ is the infinitesimal generator of the heat kernel	167
7.11 Definition of $H^{1/2}(\mathbb{R}^n)$	167
7.12 Integral formulas for $(f, p f)$ and $(f, \sqrt{p^2 + m^2} f)$	170
7.13 Convexity inequality for the relativistic kinetic energy	171
7.14 Density of $C_c^\infty(\mathbb{R}^n)$ in $H^{1/2}(\mathbb{R}^n)$	171

7.15	Action of $\sqrt{-\Delta}$ and $\sqrt{-\Delta + m^2} - m$ on distributions	172
7.16	Multiplication of $H^{1/2}$ functions by C^∞ -functions	173
7.17	Symmetric decreasing rearrangement decreases kinetic energy	174
7.18	Weak limits	176
7.19	Magnetic fields: The H_A^1 -spaces	177
7.20	Definition of $H_A^1(\mathbb{R}^n)$	178
7.21	Diamagnetic inequality	179
7.22	$C_c^\infty(\mathbb{R}^n)$ is dense in $H_A^1(\mathbb{R}^n)$	180
Exercises		181
CHAPTER 8. Sobolev Inequalities		183
8.1	Introduction	183
8.2	Definition of $D^1(\mathbb{R}^n)$ and $D^{1/2}(\mathbb{R}^n)$	185
8.3	Sobolev's inequality for gradients	186
8.4	Sobolev's inequality for $ p $	188
8.5	Sobolev inequalities in 1 and 2 dimensions	189
8.6	Weak convergence implies strong convergence on small sets	192
8.7	Weak convergence implies a.e. convergence	196
8.8	Sobolev inequalities for $W^{m,p}(\Omega)$	197
8.9	Rellich-Kondrashov theorem	198
Exercises		199
CHAPTER 9. Potential Theory and Coulomb Energies		201
9.1	Introduction	201
9.2	Definition of harmonic, subharmonic, and superharmonic functions	202
9.3	Properties of harmonic, subharmonic, and superharmonic functions	203
9.4	The strong maximum principle	207
9.5	Harnack's inequality	209
9.6	Subharmonic functions are potentials	210
9.7	Spherical charge distributions are 'equivalent' to point charges	212
9.8	Positivity properties of the Coulomb energy	214

9.9 Mean value inequality for $\Delta - \mu^2$	215
9.10 Lower bounds on Schrödinger 'wave' functions	217
Exercises	219
CHAPTER 10. Regularity of Solutions of Poisson's Equation	221
10.1 Introduction	221
10.2 Continuity and first differentiability of solutions of Poisson's equation	224
10.3 Higher differentiability of solutions of Poisson's equation	226
CHAPTER 11. Introduction to the Calculus of Variations	231
11.1 Introduction	231
11.2 Schrödinger's equation	233
11.3 Domination of the potential energy by the kinetic energy	234
11.4 Weak continuity of the potential energy	238
11.5 Existence of a minimizer for E_0	239
11.6 Higher eigenvalues and eigenfunctions	242
11.7 Regularity of solutions	243
11.8 Uniqueness of minimizers	244
11.9 Uniqueness of positive solutions	245
11.10 The hydrogen atom	246
11.11 The Thomas-Fermi problem	248
11.12 Existence of an unconstrained Thomas-Fermi minimizer	249
11.13 Thomas-Fermi equation	250
11.14 The Thomas-Fermi minimizer	251
11.15 The capacitor problem	253
11.16 Solution of the capacitor problem	257
11.17 Balls have smallest capacity	260
Exercises	261
List of Symbols	265
References	269
Index	273
