Random Times and Enlargements of Filtrations in a Brownian Setting

Springer

Contents

-1	Notation and Convention	1
0	Preliminaries	3
0.1	Dash's Maximal Identity	3
0.2	Balance Formula	4
0.3	Predictable Compensators	6
0.4	σ -fields Associated with a Random Time A	6
0.5	Integration by Parts Formulae	7
0.6	H^1 and BMO Spaces	7
0.7	Exercises	8
1	Enlargements of Filtrations	11
1.1	Some General Problems of Enlargements	11
1.2	Progressive Enlargement	12
1.2.1	Decomposition Formula	13
1.2.2	Pitman's Theorem on $2S - B$ and Some Generalizations via Some Progressive Enlargement of Filtration	17
1.3	Initial Enlargement	18
1.4	Further References	22
1.5	Exercises	22
A	Appendix: Some Enlargements Formulae	31
	Table 1a and 1.b: Progressive Enlargements	32
	Table 2a and 2.b: Initial Enlargements	34
	Comments on the Tables	36
2	Stopping and Non-stopping Times	41
2.1	Stopping Times and Dash's Optional Theorem	41
2.1.1	The Knight-Maisonneuve Characterization of Stopping Times	41
2.1.2	D. Williams' Example of a Pseudo-stopping Time	42

2.1.3 A Characterization of Pseudo-stopping Times	43
2.2 How Badly are the BDG Inequalities Affected by a General Random Time?	44
2.2.1 A Global Approach (Common to all A 's)	45
2.2.2 An "Individual" Approach (Depending on A)	46
2.3 Local Time Estimates	47
2.4 Further References	49
2.5 Exercises	49
3 On the Martingales which Vanish on the Set of Brownian Zeros	53
3.1 Some Quantities Associated with γ	53
3.1.1 Azéma Supermartingale and the Predictable Compensator Associated with γ	54
3.1.2 Path Decomposition Relative to γ	55
3.1.3 Brownian Meander	55
3.2 Some Examples of Martingales which Vanish on $Z = \{t; B_t = 0\}$	57
3.3 Some Brownian Martingales with a Given Local Time, or Supremum Process	59
3.4 A Remarkable Coincidence between $E[X \mathcal{F}_t]$ and X_t	60
3.5 Resolution of Some Conditional Equations	62
3.6 Understanding how $E[X \mathcal{F}_t]$ and X_t Differ	64
3.7 Exercises	66
4 PRP and CRP for Some Remarkable Martingales	71
4.1 Definition and First Example	71
4.2 PRP and Extremal Martingale Distributions	74
4.3 CRP: An Attempt Towards a General Discussion	75
4.3.1 An Attempt to Understand the CRP in Terms of a Generalized Moments Problem	76
4.3.2 Some Sufficient Conditions for the CRP	77
4.3.3 The Case of the Azéma Martingale	79
4.4 Exercises	83
5 Unveiling the Brownian Path (or history) as the Level Cross 5.1 Above and Under a Given Level	87
5.1.1 First Computations in Williams' Framework	88
5.1.2 First Computations in Azéma-Bu's Framework	90
5.2 Rogers-Wald Theorem about Williams' Filtration	93
5.2.1 Some Space Martingales which are Constant up to a Fixed Level	93
5.2.2 A Dense Family of Continuous Martingales	94
5.3 A Discussion Relative to $(\mathcal{F}_t^a, a \in \mathbb{R})$	95
5.3.1 Bu's Result about $(\mathcal{F}_t^a, a \in \mathbb{R})$ -Martingales	95

5.3.2 Some Markov Processes with Respect to $(\mathcal{F}_t^x, x \in \mathbb{R}) \dots$	97
5.4 Some Subfiltrations of the Brownian Filtration	99
5.5 Exercises	101
6 Weak and Strong Brownian Filtrations	103
6.1 Definitions	104
6.2 Examples of Weak Brownian Filtrations	105
6.2.1 Change of Probability	106
6.2.2 Change of Time	108
6.2.3 Walsh's Brownian Motion and Späher Martingales	109
6.3 Invariants of a Filtration	112
6.4 Further References	114
6.5 Exercises	114
7 Sketches of Solutions for the Exercises	117
References	141
Index	157
