Contents

Introduction	v
Chapter 1 Preliminaries	1
1. Points and Sets in \mathbf{R}^n	1
2. \mathbf{R}^n as a Metric Space	2
3. Open and Closed Sets in \mathbf{R}^n ; Special Sets	5
4. Compact Sets; the Heine-Borel Theorem	8
5. Functions	9
6. Continuous Functions and Transformations	10
7. The Riemann Integral	11
Exercises	12
Chapter 2 Functions of Bounded Variation; the Riemann-Stieltjes Integral	15
1. Functions of Bounded Variation	15
2. Rectifiable Curves	21
3. The Riemann-Stieltjes Integral	23
4. Further Results About Riemann-Stieltjes Integrals	28
Exercises	31
Chapter 3 Lebesgue Measure and Outer Measure	33
1. Lebesgue Outer Measure; the Cantor Set	33
2. Lebesgue Measurable Sets	37
3. Two Properties of Lebesgue Measure	40
4. Characterizations of Measurability	42
5. Lipschitz Transformations of \mathbf{R}^n	44
6. A Nonmeasurable Set	46
Exercises	47

Chapter 4	Lebesgue Measurable Functions	50
	1. Elementary Properties of Measurable Functions	51
	2. Semicontinuous Functions	55
	3. Properties of Measurable Functions: Egorov's Theorem and Lusin's Theorem	56
	4. Convergence in Measure	59
	Exercises	61
Chapter 5	The Lebesgue Integral	64
	1. Definition of the Integral of a Nonnegative Function	64
	2. Properties of the Integral	66
	3. The Integral of an Arbitrary Measurable f	71
	4. A Relation Between Riemann-Stieltjes and Lebesgue Integrals; the L^p Spaces, $0 < p < \infty$	76
	5. Riemann and Lebesgue Integrals	83
	Exercises	85
Chapter 6	Repeated Integration	87
	1. Fubini's Theorem	87
	2. Tonelli's Theorem	91
	3. Applications of Fubini's Theorem	93
	Exercises	96
Chapter 7	Differentiation	98
	1. The Indefinite Integral	98
	2. Lebesgue's Differentiation Theorem	100
	3. The Vitali Covering Lemma	109
	4. Differentiation of Monotone Functions	111
	5. Absolutely Continuous and Singular Functions	115
	6. Convex Functions	118
	Exercises	123
Chapter 8	L^p Classes	125
	1. Definition of L^p	125
	2. Hölder's Inequality; Minkowski's Inequality	127
	3. Classes L^p	130
	4. Banach and Metric Space Properties	131

Contents	ix
5. The Space L^2 ; Orthogonality	135
6. Fourier Series; Parseval's Formula	137
7. Hilbert Spaces	141
Exercises	143
Chapter 9 Approximations of the Identity; Maximal Functions	145
1. Convolutions	145
2. Approximations of the Identity	148
3. The Hardy-Littlewood Maximal Function	155
4. The Marcinkiewicz Integral	157
Exercises	159
Chapter 10 Abstract Integration	161
1. Additive Set Functions; Measures	161
2. Measurable Functions; Integration	167
3. Absolutely Continuous and Singular Set Functions and Measures	174
4. The Dual Space of L^p	182
5. Relative Differentiation of Measures	185
Exercises	190
Chapter 11 Outer Measure; Measure	193
1. Constructing Measures from Outer Measures	193
2. Metric Outer Measures	196
3. Lebesgue-Stieltjes Measure	197
4. Hausdorff Measure	201
5. The Carathéodory-Hahn Extension Theorem	204
Exercises	208
Chapter 12 A Few Facts From Harmonic Analysis	211
1. Trigonometric Fourier Series	211
2. Theorems about Fourier Coefficients	217
3. Convergence of $S[f]$ and $\tilde{S}[f]$	222
4. Divergence of Fourier Series	227
5. Summability of Sequences and Series	229
6. Summability of $S[f]$ and $\tilde{S}[f]$ by the Method of the Arithmetic Mean	235

7.	Summability of $S[f]$ by Abel Means	246
8.	Existence of \tilde{f}	250
9.	Properties of \tilde{f} for $f \in L^p$, $1 < p < \infty$	256
10.	Application of Conjugate Functions to Partial Sums of $S[f]$	259
	Exercises	260
