Combinations of Complex Dynamical Systems

Springer

Contents

1	Introduction	1
1.1	Motivation from dynamics—a brief sketch	1
1.2	Thurston's Characterization and Rigidity Theorem. Standard definitions	2
1.3	Examples	6
1.3.1	A realizable mating	6
1.3.2	An obstructed mating	6
1.3.3	An obstructed expanding Thurston map	8
1.3.4	A subdivision rule	11
1.4	Summary of this work	12
1.5	Survey of previous results	14
1.5.1	Enumeration	14
1.5.2	Combinations and decompositions	17
1.5.3	Parameter space	20
1.5.4	Combinations via quasiconformal surgery	22
1.5.5	From p.f. to geometrically finite and beyond	23
1.6	Analogy with three-manifolds	24
1.7	Connections	27
1.7.1	Geometric Galois theory	27
1.7.2	Gromov hyperbolic spaces and interesting groups	28
1.7.3	Cannon's conjecture	29
1.8	Discussion of combinatorial subtleties	29
1.8.1	Overview of decomposition and combination	30
1.8.2	Embellishments. Technically convenient assumption.	31
1.8.3	Invariant multicurves for embellished map of spheres. Thurston linear map.	32
1.9	Tameness assumptions	33
2	Preliminaries	37
2.1	Mapping trees	39
2.2	Map of spheres over a mapping tree	44
2.3	Map of annuli over a mapping tree	46

3	Combinations	49
3.1	Topological gluing data	49
3.2	Critical gluing data	50
3.3	Construction of combination	52
3.4	Summary: statement of Combination Theorem	53
3.5	Properties of combinations	53
4	Uniqueness of combinations	59
4.1	Structure data and amalgamating data	59
4.2	Combinatorial equivalence of sphere and annulus maps	60
4.3	Statement of Uniqueness of Combinations Theorem	61
4.4	Proof of Uniqueness of Combinations Theorem	62
4.4.1	Missing disk maps irrelevant	62
4.4.2	Reduction to fixed boundary values	62
4.4.3	Reduction to simple form	63
4.4.4	Conclusion of proof of Uniqueness Theorem	67
5	Decomposition	69
5.1	Statement of Decomposition Theorem	69
5.2	Standard form with respect to a multicurve	71
5.3	Maps in standard forms are amalgams	71
5.4	Proof of Decomposition Theorem	76
6	Uniqueness of decompositions	79
6.1	Statement of Uniqueness of Decompositions Theorem	79
6.2	Proof of Uniqueness of Decomposition Theorem	79
7	Counting classes of annulus maps	83
7.1	Statement of Number of Classes of Annulus Maps Theorem	83
7.2	Proof of Number of Classes of Annulus Maps Theorem	84
7.2.1	Homeomorphism of annuli. Index	84
7.2.2	Characterization of combinatorial equivalence by group action	85
7.2.3	Reduction to abelian groups	86
7.2.4	Computations and conclusion of proof	86
8	Applications to mapping class groups	89
8.1	The Twist Theorem	89
8.2	Proof of Twist Theorem	90
8.2.1	Combinatorial automorphisms of annulus maps	90
8.2.2	Conclusion of proof of Twist Theorem	91
8.3	When Thurston obstructions intersect	92
8.3.1	Statement of Intersecting Obstructions Theorem	92
8.3.2	Maps with intersecting obstructions have large mapping class groups	93

9	Examples	95
9.1	Background from complex dynamics	95
9.2	Matings	96
9.3	Generalized matings	98
9.4	Integral Lattès examples	101
10	Canonical Decomposition Theorem	105
10.1	Cycles of a map of sphere, and their orbifolds	105
10.2	Statement of Canonical Decomposition Theorem	107
10.3	Proof of Canonical Decomposition Theorem	108
10.3.1	Characterization of rational cycles with hyperbolic orbifold	108
10.3.2	Conclusion of proof	109
