Contents

Preface	ix
Part One Sequential Algorithms	
1. Introduction	3
1.1 Measures of Complexity	4
1.2 Computer Model	5
2. Arithmetic Complexity of Computations	7
2.1 Discoveries of the 1960s	7
2.2 Product of Integers	8
2.3 The Fast Fourier Transform (FFT)	9
2.4 Matrix Product	13
2.5 Summary	20
3. Solving Recurrence Relations	21
3.1 Divide-and-conquer Approach	21
3.2 Technique of Recurrence Expansion	22
3.3 Solution of Homogeneous Recurrences	23
3.4 Homogeneous Equations	25
3.5 Non-homogeneous Equations	27
3.6 Transformation Techniques	31
3.7 Guessing a Solution	36
4. Complexity of Data-processing Problems	38
4.1 Worst-case and Average-case Time Bounds	38
4.2 Data Structures	44
4.3 Comments	51
5. Complexity and Difficult Combinatorial Problems	52
5.1 Exponential Time Algorithms	53
5.2 Efficient Algorithm Design Techniques	55
5.3 Probabilistic Algorithms	64

6. Complexity and Theorem Proving by Machine	71
6.1 The First-order Integer Addition Problem	71
6.2 Decidable and Undecidable Problems	72
6.3 Decidable Problems and their Algorithms	73
6.4 Diagonalization and Reduction	74
6.5 Lower Bounds	76
7. Classifying the Computational Complexity of Algorithms	77
7.1 Terminology and Notation	77
7.2 Non-deterministic Algorithms	78
7.3 <i>NP</i> -complete Problems	81
7.4 Khachian's Algorithm	84
7.5 Beyond the <i>NP</i> -class	85
8. The Theory of Computational Complexity	88
8.1 Some Basic Definitions	89
8.2 Theoretical Complexity Measures and Related Results	90
8.3 The Speed-up Theorem	92
8.4 Complexity Classes, The Gap Theorem	96

Part Two Parallel Algorithms

9. Computational Complexity of Parallel Algorithms	101
9.1 Introduction	101
9.2 Parallel Computers	102
9.3 Parallel Algorithms	114
9.4 Cascade Partial Sum Method	120
10. The Root-finding Algorithms for a Non-linear Function	123
10.1 Parallel Zero-searching Algorithms	123
11. Iterative Parallel Algorithms	130
11.1 Models of Parallel Iterative Methods	130
11.2 Model for a Performance Analysis of a Synchronized Iterative Algorithm	132
11.3 Asynchronous Iterative Algorithms	135
11.4 Parallel Algorithms for Solving Systems of Non-linear Equations	138
12. Synchronized Matrix Multiplication Algorithms	145
12.1 Matrix Multiplication Algorithms	145
12.2 Parallel Hardware Considerations for the Matrix Product Algorithms	150
12.3 Concluding Remarks	153

13. The Parallel FFT Algorithm	154
13.1 Bergland's Parallel FFT Algorithm	154
13.2 Parallel Radix-2 FFT Computation	161
13.3 Parallel Computation of the Two-dimensional DFT	165
14. Parallel Comparison Sorts	168
14.1 Lower Bounds on Parallel Comparison Problems	170
14.2 Enumeration Sorting	171
14.3 Odd-even Transposition Sort	176
14.4 Bucket (Distribution) Sorts	180
14.5 Merge Sorts	186
15. Parallel Graph Search and Traversal	201
15.1 Distributed Computing Systems (DCS) Graphs	201
15.2 Parallel Graph Algorithms	202
15.3 Parallel Topological Sort	209
Index	221
