Contents

	Preface	v
	Terminology	xiii
PART I	CONCEPTS	1
1	Parallel Computers and Computation	3
1.1	Parallelism and Computing	3
1.2	A Parallel Machine Model	9
1.3	A Parallel Programming Model	12
1.4	Parallel Algorithm Examples	18
1.5	Summary	23
	Exercises	23
	Chapter Notes	24
2	Designing Parallel Algorithms	27
2.1	Methodical Design	27
2.2	Partitioning	28
2.3	Communication	32
2.4	Agglomeration	42
2.5	Mapping	50
2.6	Case Study: Atmosphere Model	57
2.7	Case Study: Floorplan Optimization	64
2.8	Case Study: Computational Chemistry	71
2.9	Summary	77
	Exercises	78
	Chapter Notes	80

3	A Quantitative Basis for Design	83
3.1	Defining Performance	83
3.2	Approaches to Performance Modeling	84
3.3	Developing Models	88
3.4	Scalability Analysis	95
3.5	Experimental Studies	100
3.6	Evaluating Implementations	106
3.7	A Refined Communication Cost Model	111
3.8	Input/Output	121
3.9	Case Study: Shortest-Path Algorithms	123
3.10	Summary	130
	Exercises	130
	Chapter Notes	133
4	Putting Components Together	137
4.1	Modular Design Review	137
4.2	Modularity and Parallel Computing	139
4.3	Performance Analysis	146
4.4	Case Study: Convolution	147
4.5	Case Study: Tuple Space	152
4.6	Case Study: Matrix Multiplication	155
4.7	Summary	159
	Exercises	161
	Chapter Notes	162
PART II	TOOLS	165
5	Compositional C++	167
5.1	C++ Review	167
5.2	CC++ Introduction	171
5.3	Concurrency	172
5.4	Locality	174
5.5	Communication	176
5.6	Asynchronous Communication	186
5.7	Determinism	187
5.8	Mapping	187
5.9	Modularity	193
5.10	Performance Issues	196
5.11	Case Study: Channel Library	200
5.12	Case Study: Fork Matrix Construction	201
5.13	Summary	202
	Exercises	203
	Chapter Notes	204

6	Fortran M	207
6.1	FM Introduction	207
6.2	Concurrency	210
6.3	Communication	212
6.4	Unstructured Communication	216
6.5	Asynchronous Communication	222
6.6	Determinism	225
6.7	Argument Passing	226
6.8	Mapping	228
6.9	Modularity	232
6.10	Performance Issues	235
6.11	Case Study: Fock Matrix Construction	238
6.12	Summary	238
	Exercises	239
	Chapter Notes	242
7	High Performance Fortran	243
7.1	Data Parallelism	243
7.2	Fortran 90	246
7.3	Data Distribution	250
7.4	Concurrency	256
7.5	Dummy Arguments and Modularity	259
7.6	Other HPF Features	261
7.7	Performance Issues	264
7.8	Case Study: Gaussian Elimination	268
7.9	Summary	271
	Exercises	272
	Chapter Notes	273
8	Message Passing Interface	275
8.1	The MPI Programming Model	275
8.2	MPI Basics	276
8.3	Global Operations	283
8.4	Asynchronous Communication	290
8.5	Modularity	293
8.6	Other MPI Features	300
8.7	Performance Issues	304
8.8	Case Study: Earth System Model	305
8.9	Summary	305
	Exercises	310
	Chapter Notes	311

9	Performance Tools	313
9.1	Performance Analysis	313
9.2	Data Collection	315
9.3	Data Transformation and Visualization	318
9.4	Tools	320
9.5	Summary	324
	Exercises	325
	Chapter Notes	325

PART III RESOURCES 327

10	Random Numbers	329
10.1	Sequential Random Numbers	329
10.2	Parallel Random Numbers	330
10.3	Distributed Random Generators	331
10.4	Summary	334
	Exercises	334
	Chapter Notes	335

11	Hypercube Algorithms	337
11.1	The Hypercube Template	337
11.2	Vector Reduction	338
11.3	Matrix Transposition	340
11.4	Mergesort	341
11.5	Summary	346
	Exercises	346
	Chapter Notes	347

12	Further Reading	349
