Preface	xi
List of Symbols	xiii
PART I FRACTALS AND METHODS FOR THE DETERMINATION OF FRACTAL DIMENSIONS	1
Chapter 1 Introduction	3
Chapter 2 Hausdorff Measure and Dimension	11
2.1 The Hausdorff Measure in R^2	11
2.2 Fractal Dimension	14
2.3 Local Hausdorff Dimension and Dimension Distribution	18
2.4 Fractals	20
Chapter 3 Deterministic Fractals	21
3.1 General Properties of Fractals	21
3.2 Examples of Deterministic Fractals	21
3.2.1 Curves of fractal dimension	21
3.2.2 Self-similar sets	22
3.2.3 A program for the generation of generalized von Koch snow flakes	26
Chapter 4 Random Fractals	29
4.1 Random Self-similar Sets	29
4.2 Mandelbrot-Zähle Cut-outs	33
4.3 Random Fractals Connected with Brownian Motion	33
4.4 Self-similar Stochastic Processes	36
Chapter 5 Methods for the Empirical Determination of Fractal Dimension	39
5.1 Introduction	39
5.2 Divider Stepping Method	40
5.3 Box-counting Method	41
5.4 Sausage Method	44

5.5	Estimation of Local Dimension	46
5.6	Further Methods	47
5.7	Estimating the Fractal Dimension of the Boundary of a Graphite Particle	48
PART II THE STATISTICS OF SHAPES AND FORMS		51
Chapter 6	Fundamental Concepts	53
Chapter 7	Representation of Contours	61
7.1	Introduction	61
7.2	Definition and Measurement of Contour Functions	62
7.2.1	Cross-section functions for symmetric figures	62
7.2.2	Radius-vector functions	63
7.2.3	Support functions	65
7.2.4	Tangent-angle functions	69
7.2.5	Comparison of the three variants of contour functions	70
7.2.6	Smoothing of contours	70
7.3	Invariant Parameters of Contour Functions for Particles	71
7.4	Two Classes of Figures	73
7.4.1	Supereclipses	73
7.4.2	Radial-rhombi	76
7.5	Determination of Approximating Contour Functions	77
7.5.1	Introduction	77
7.5.2	Approximation by ellipses and radial-rhombi	78
7.5.3	Fourier analysis	80
7.6	Stochastic Models for the Contour Function Approach	88
7.6.1	Invariant contour function parameters of random figures	88
7.6.2	Random radial-rhombi	89
7.6.3	Randomly disturbed figures	90
7.6.4	Three disturbance models	91
7.7	Statistical Analysis for the Contour Function Approach	94
7.7.1	Values of the invariant parameters of single figures	94
7.7.2	Statistical determination of distributional characteristics of the invariant parameters	95
7.7.3	Statistics for randomly disturbed functions	96
7.7.4	Statistics for random radial-rhombi and related figures	100
Chapter 8	Set Theoretic Analysis	103
8.1	Introduction	103
8.2	Simple Geometrical Shape Ratios	103
8.3	Characteristics of Random Compact Sets	107
8.3.1	Introduction	107
8.3.2	Random compact sets	107
8.3.3	Mean value formulae for compact convex sets	108
8.3.4	Means of random compact sets	108
8.3.5	Variances of random compact sets	113

8.3.6	Medians of random compact sets	115
8.3.7	Some simple statistical methods	115
8.4	Four Functions for Description of Figures	116
8.4.1	Introduction	116
8.4.2	Chord length distribution functions	117
8.4.3	Isotropized set covariance function	122
8.4.4	Erosion functions	123
8.5	Stochastic Models of Random Compact Sets	125
8.5.1	Poisson polygon	125
8.5.2	Dirichlet polygons	128
8.5.3	Rounded polygons	132
8.5.4	Convex hulls of random figures	134
8.5.5	Gaussian random sets	138
8.5.6	Inhomogeneous Boolean models	138
8.5.7	Vorob'ev's forest-fire model	139

Chapter 9 Point Description of Figures 141

9.1	Introduction	141
9.2	Description of Landmark Configurations and their Size	141
9.3	Distances and Transformations of Landmark Configurations	142
9.3.1	The general problem	142
9.3.2	Formulae for some classes of transformations	144
9.4	Means of Planar Configurations of Points	148
9.4.1	A metric for point configurations	148
9.4.2	Calculation of mean configurations	149
9.5	Procrustean Analysis	150
9.5.1	The problem	150
9.5.2	Using the results of Procrustean analysis	151
9.6	Shape Analysis for Triangles and Point Triplets	153
9.6.1	Introduction	153
9.6.2	Triangles	153
9.7	Point Triplets	158
9.8	Statistics for the Bookstein Model	161
9.8.1	The Bookstein model	161
9.8.2	Estimation of distances and variances	162
9.8.3	Shape statistics for the Bookstein model	164

Chapter 10 Examples 167

10.1	The Form of Sand Grains	167
10.2	The Form of Hands	178

PART III POINT FIELD STATISTICS 187

Chapter 11 Fundamentals 189

Chapter 12 Finite Point Fields 197

12.1	Introduction	197
12.2	Point Fields of a Fixed Number of Points	197
12.2.1	Two stochastic models	197
12.2.2	Two geological examples	200

12.3	Point Fields with a Random Number of Points	203
12.3.1	Introduction	203
12.3.2	Some distributions of random numbers	204
Chapter 13	Poisson Point Fields	211
13.1	Introduction	211
13.2	The Homogeneous Poisson Field	212
13.2.1	Fundamental properties	212
13.2.2	Some important formulae	213
13.2.3	Second-order characteristics	216
13.2.4	Simulation of a homogeneous Poisson field	217
13.2.5	Statistics for the homogeneous Poisson field	218
13.3	Inhomogeneous Poisson Fields	228
13.3.1	Fundamental properties	228
13.3.2	Important formulae	229
13.3.3	Simulating an inhomogeneous Poisson field	230
13.3.4	Statistics for an inhomogeneous Poisson field	231
Chapter 14	Fundamentals of the Theory of Point Fields	241
14.1	Introduction	241
14.2	The Intensity Measure	241
14.3	Emptiness Probabilities	243
14.4	Second-Order Characteristics	244
14.4.1	Definitions and formulae	244
14.4.2	Interpretation of pair correlation functions	250
14.5	Characteristics of Third and Higher Order	259
14.6	Second-order Characteristics of Marked Point Fields	262
14.7	Nearest-neighbour Correlation	266
14.8	Distances to Neighbours	266
14.9	Palm Characteristics	268
14.10	Anisotropy Characteristics for Marked and Non-marked Point Fields	269
Chapter 15	Statistics for Homogeneous Point Fields	275
15.1	Introduction	275
15.2	Estimating the Intensity and the Intensity Measure	276
15.3	Estimating Mark Distributions and Related Quantities	277
15.4	Estimating Second-order Characteristics	279
15.4.1	Estimating $\hat{R}(B)$, $K(r)$ and $L(r)$	279
15.4.2	Estimating the pair correlation function	284
15.4.3	Individual L - and g -functions	290
15.4.4	Estimating mark correlation functions	291
15.4.5	Orientation analysis	293
15.5	Estimating Third-order Characteristics	294
15.6	Estimating Nearest-neighbour Distance Distributions	296
15.7	Estimating Palm Means	299
15.8	Goodness-of-Fit Tests for Point Field Models	300
15.9	Methods for Estimating Model Parameters	304

Chapter 16	Point Field Models	307
16.1	Introduction	307
16.2	Cluster Fields: Neyman-Scott Fields	309
16.2.1	Model description	309
16.2.2	Formulae for Neyman-Scott fields	310
16.2.3	Statistical methods for Matern cluster fields	314
16.3	Gibbs Fields	317
16.3.1	Describing the models	317
16.3.2	Simulating Gibbs fields	323
16.3.3	Statistical methods for Gibbs fields	326
Appendices		335
A	Measure and Content	337
B	$\sup$ and $\inf$, $\limsup$ and $\liminf$	339
C	Basic Ideas in Topology	341
D	Set Operations	343
E	The Euclidean and Hausdorff Metrics	347
F	Boolean Models	349
G	The Convex Hull	353
H	Random Lines and Line Fields	355
I	The Dirichlet Mosaic and the Delaunay Triangulation	361
J	Germ-Grain Models	363
K	The Area of Intersection of Two Discs	365
L	Kernel Estimators for Density Functions	367
References		369
Index		387
