

Richard Serfozo

Introduction to Stochastic Networks

Springer

Contents

Preface	vii
1 Jackson and Whittle Networks	1
1.1 Preliminaries on Networks and Markov Processes	1
1.2 Tandem Network	7
1.3 Definitions of Jackson and Whittle Processes	9
1.4 Properties of Service and Routing Rates	12
1.5 Equilibrium Behavior	14
1.6 Production-Maintenance Network	18
1.7 Networks with Special Structures	19
1.8 Properties of Jackson Equilibrium Distributions	20
1.9 Convolutions for Single-Server Nodes	24
1.10 Throughputs and Expected Sojourn Times	26
1.11 Algorithms for Performance Parameters	30
1.12 Monte Carlo Estimation of Network Parameters	32
1.13 Properties of Whittle Networks	35
1.14 Exercises	39
1.15 Bibliographical Notes	42
2 Reversible Processes	44
2.1 Reversibility	44
2.2 Time Reversal	47
2.3 Invariant Measures	50
2.4 Construction of Reversible Processes	53
2.5 More Birth-Death Processes	55

2.6	Reversible Network Processes	58
2.7	Examples of Reversible Networks	61
2.8	Partition-Reversible Processes	64
2.9	Examples of Partition-Reversible Processes	68
2.10	Exercises	71
2.11	Bibliographical Notes	73
3	Miscellaneous Networks	74
3.1	Networks with Multiple Types of Units	74
3.2	Kelly Networks: Route-dependent Services	79
3.3	BCMP Networks: Class-Node Service Dependencies	81
3.4	Networks with Cox and General Service Times	82
3.5	Networks with Constraints	85
3.6	Networks with Blocking and Rerouting	87
3.7	Bottlenecks in Closed Jackson Networks	90
3.8	Modeling Whittle Networks by Locations of the Units	91
3.9	Partially Balanced Networks	93
3.10	Exercises	96
3.11	Bibliographical Notes	97
4	Network Flows and Travel Times	99
4.1	Point Process Notation	99
4.2	Extended Lévy Formula for Markov Processes	102
4.3	Poisson Functionals of Markov Processes	104
4.4	Multivariate Compound Poisson Processes	109
4.5	Poisson Flows in Jackson and Whittle Networks	112
4.6	Palm Probabilities for Markov Processes	115
4.7	Sojourn and Travel Times of Markov Processes	120
4.8	Palm Probabilities of Jackson and Whittle Networks	122
4.9	Travel Times on Overtake-Free Routes	127
4.10	Exercises	131
4.11	Bibliographical Notes	133
5	Little Laws	135
5.1	Little Laws for Markovian Systems	136
5.2	Little Laws for General Queueing Systems	139
5.3	Preliminary Laws of Large Numbers	141
5.4	Utility Processes	143
5.5	Omnibus Little Laws	145
5.6	Little Laws for Regenerative Systems	149
5.7	Exercises	153
5.8	Bibliographical Notes	153
6	Stationary Systems	155
6.1	Preliminaries on Stationary Processes	155

6.2	Palm Probabilities	157
6.3	Campbell–Mecke Formulas for Palm Probabilities	161
6.4	Little Laws for Stationary Systems	166
6.5	Sojourn Times and Related Functionals	171
6.6	Travel Times for Stochastic Processes	172
6.7	Sojourn and Travel Times in Networks	174
6.8	Exercises	179
6.9	Bibliographical Notes	180
7	Networks with String Transitions	181
7.1	Definition of a String-Net	181
7.2	Invariant Measures of String-Nets	184
7.3	Traffic Equations, Partial Balance, and Throughputs	187
7.4	String-Nets with Unit-Vector Transitions	191
7.5	Networks with One-Stage Batch Transitions	193
7.6	Networks with Compound-Rate String Transitions	195
7.7	Networks with Multiple, Compound-Rate String Transitions	199
7.8	String-Nets with Two-Node Batch Transitions	201
7.9	Single Service Station With String Transitions	204
7.10	Bibliographical Notes	205
8	Quasi-Reversible Networks and Product Form Distributions	206
8.1	Quasi-Reversibility	207
8.2	Network to be Studied	210
8.3	Characterization of Product Form Distributions	212
8.4	Quasi-Reversibility and Biased Local Balance	215
8.5	Networks with Reversible Routing	219
8.6	Queueing Networks	221
8.7	Time-Reversals and Departure–Arrival Reversals	224
8.8	Networks with Multiclass Transitions	225
8.9	Exercises	227
8.10	Bibliographical Notes	228
9	Space–Time Poisson Models	230
9.1	Introductory Examples	230
9.2	Laplace Functionals of Point Processes	232
9.3	Transformations of Poisson Processes	233
9.4	Translations, Partitions, and Clusters	238
9.5	Service Systems with No Queuing	242
9.6	Network of $M/G/\infty$ Service Stations	246
9.7	Particle Systems	249
9.8	Poisson Convergence of Space–Time Processes	255
9.9	Transformations into Large Spaces	257
9.10	Particle Flows in Large Spaces	259
9.11	Exercises	261

9.12 Bibliographical Notes	263
10 Spatial Queueing Systems	264
10.1 Preliminaries	265
10.2 Stationary Distributions and Ergodicity	269
10.3 Properties of Stationary Distributions and Examples	273
10.4 Throughputs and Expected Sojourn Times	278
10.5 Poisson Flows in Open Systems	281
10.6 Systems with Multiclass Units	284
10.7 Bibliographical Notes	287
References	289
Index	297
