PREFACE v

INTRODUCTION ix

1. REVIEW OF LINEAR ORDINARY DIFFERENTIAL EQUATIONS

1.1	Introduction	1
1.2	Linear and Nonlinear ODE	3
1.3	Initial and Boundary Value Problems	6
1.4	Elements of Second-Order Linear DE	9
1.5	Method of Variation of Parameters	13
1.6	Green's Function	16

2. TRANSFORMATIONS OF NONLINEAR ORDINARY DIFFERENTIAL EQUATIONS 23

2.1	Introduction	23
2.2	Simple Symmetries—Equidimensionality and Scale Invariance	24

2.3	First-Order Nonlinear Equations and Their Linearization—The Riccati Equation	28
2.4	Abel's Equation	30
2.5	Relation Between Third-Order Linear Equations and Second-Order Nonlinear Equations	33
2.6	Relationship Betwen Linear and Nonlinear Second-Order Equations	37
2.7	Exact Linearization of Nonlinear Autonomous Second-Order Equations via Factoring	42
2.8	Transformation of Nonlinear Equations to Nonlinear Integrable Forms	48
2.9	Reducing Nonlinear Nonautonomous Second-Order Equations to First-Order Equations	52
2.10	Transforming Nonlinear Nonautonomous Second-Order Equations to the Lie Plane	59
2.11	Langmuir's Equation—When Transformations Do Not Work	63
2.12	Example of an Equation Which Is "Solved" Exactly, but Has a Solution too Implicit to Be of Practical Use	66

3. SERIES SOLUTIONS OF NONLINEAR DIFFERENTIAL EQUATIONS 69

3.1	Introduction	69
3.2	Classification of Singular Points of Homogeneous Linear Differential Equations	70
3.3	The Point at Infinity	79
3.4	Singularities of Nonlinear Differential Equations	81
3.5	First-Order Binomial Equations	87
3.6	Singularities of the Briot-Bouquet Equation	89
3.7	Solutions of the Briot-Bouquet Equation	94
3.8	Power Series Solutions of Nonlinear DE	97
3.9	Method of Majorants	109
3.10	Construction of Majorant Equations	112
3.11	Series Solution of Boundary Value Problems	119
3.12	Asymptotic Series Solution of Boundary Value Problems	123
3.13	Computation of Radius of Convergence of a Series	129

4. LOCAL AND GLOBAL ANALYSIS OF NONLINEAR DIFFERENTIAL EQUATIONS 133

4.1 Introduction 133
4.2 Local Analysis About Singular Points—The Painlevé Property 140
4.3 Large-Time (Asymptotic) Behavior 152
4.4 Embedding of Asymptotic Solutions in a Larger Family—The Thomas-Fermi Equation 165
4.5 Global Solutions of Nonlinear Boundary Value Problems by Iteration 176
4.6 The Connection Problem for Euler-Painlevé Equations 187
4.7 Other Nonlinear DE Related to Euler-Painlevé Equations 201

5. EXISTENCE THEORY FOR BOUNDARY VALUE PROBLEMS VIA SHOOTING TECHNIQUES 213

5.1 Introduction 213
5.2 Elementary Discussion of Boundary Value Problems 214
5.3 Lagerstrom Model for Flow at Low Reynolds Numbers 220
5.4 Similarity Solutions of the Porous Media Equation 224
5.5 A Differential Equation Arising in Electromagnetic Theory 231
5.6 A Boundary Value Problem Associated with an Equation of Plasma Physics 240
5.7 Some Other Boundary Value Problems 243

6. PHASE SPACE STUDY OF AUTONOMOUS SYSTEMS 245

6.1 Introduction 245
6.2 One-Dimensional Phase Space or the Phase Line 247
6.3 Nature of Singular Points in the Phase Plane 249
6.4 Examples of Simple Critical Points 261
6.5 Singular Points at Infinity 268
6.6 Nonsimple Singular Points 273
6.7 Quadratic Systems 284
6.8 Normal Quadratic Systems 287

6.9 Nonlinear Diffusion Equation of Population Growth—Fisher's Equation 303
6.10 Boundary Value Problems for a Nonlinear Diffusion Equation 308
6.11 Collapse of a Spherical Cavity in a Perfect Gas 316
6.12 Nonlinear Traveling Waves in an Isothermal Atmosphere 324
6.13 Singular Points of a System of Three Linear Differential Equations 330

7. SINGULARITY STRUCTURE AND CHAOTIC BEHAVIOR OF NONLINEAR ORDINARY DIFFERENTIAL EQUATIONS 351

7.1 Introduction 351
7.2 The Lorenz System 365
7.3 Henon-Heiles Hamiltonian System 394
7.4 Some Other Hamiltonian Systems 409
7.5 The Kuramoto Model 413
7.6 Painlevé Property for Some Other Systems 419

8. PAINLEVÉ TRANSCENDENTS 421

8.1 Introduction 421
8.2 Special Solutions of Painlevé Equations 436
8.3 Transformations and Special Solutions of Painlevé Equations 442
8.4 Solutions of Second-Order Nonlinear DE with Irrational Right Sides 452
8.5 The First Painlevé Equation 460
8.6 The Second Painlevé Equation 473
8.7 The Fourth Painlevé Equation 482
8.8 The Fifth Painlevé Equation 493
8.9 The Third Painlevé Equation 501

9. APPLICATIONS OF THE THEORY OF NONLINEAR ORDINARY DIFFERENTIAL EQUATIONS TO SOLUTIONS OF PARTIAL DIFFERENTIAL EQUATIONS—SOME PHYSICAL PROBLEMS 512

9.1 Introduction 512
9.2 N-Wave Solutions of Nonplanar Burgers Equation 513

9.3 Collapse of a Spherical Cavity in a Perfect Gas—The Global Solution 520
9.4 The Converging Shock Wave from a Spherical or Cylindrical Piston 529
9.5 Solutions of the Shallow-Water Equations Representing Gravity-Current Releases 538
9.6 Generalized Similarity Solution for Climb of a Bore over a Sloping Beach 545
