

CIRCUITS OF THE MIND

LESLIE G. VALIANT

New York Oxford
OXFORD UNIVERSITY PRESS
1994

Contents

1	The Approach	1
2	Biological Constraints	9
2.1	Introduction	9
2.2	The Neocortex	11
2.3	Pyramidal Neurons	17
3	Computational Laws	25
3.1	Introduction	25
3.2	Three Sources of Complexity	29
4	Cognitive Functions	33
4.1	Introduction	33
4.2	Boolean Functions	34
4.3	Learning	38
4.4	The Nature of Concepts	40
4.5	Experimental Psychology	43
5	The Neuroidal Model	49
5.1	Programmable Models	49
5.2	Neuroids	51
5.3	Timing	60
6	Knowledge Representations	63
6.1	Positive Knowledge Representations	63
6.2	Vicinal Algorithms	66
6.3	Frontier Properties and Storing New Items	69
6.4	Frontier Properties and Associations	73

6.5	Hashing	75
7	Unsupervised Memorization	79
7.1	An Algorithm	79
8	Supervised Memorization	89
8.1	Introduction	89
8.2	A Simple Algorithm	91
8.3	A Second Algorithm	94
9	Supervised Inductive Learning	99
9.1	Introduction	99
9.2	Pac Learning	101
9.3	Learning Conjunctions	105
9.4	Learning Disjunctions	110
9.5	Learning Linear Threshold Functions	113
10	Correlational Learning	121
10.1	An Algorithm	121
10.2	Computing with Numerical Values	124
11	Objects and Relational Expressions	127
11.1	Multiple Object Scenes	127
11.2	Relations	129
11.3	Timed Conjunctions	133
11.4	Memorizing Expressions Containing Relations	136
11.5	Memorizing New Relations	140
11.6	Discussion	141
12	Systems Questions	145
12.1	Introduction	145
12.2	General Organizational Principles	146
12.3	Compatibility of Mechanisms	152
13	Reasoning	157
13.1	Introduction	157
13.2	Reflex Reasoning	160
13.3	Simple Reflex Reasoning	161

13.4 Compound Reflex Reasoning	169
13.5 Nonmonotonic Phenomena	172
14 More Detailed Neural Models	179
14.1 Implementing Vicinal Algorithms	179
14.2 A Laminar Model	182
14.3 A Columnar Model	192
14.4 Sparser Random Graphs	196
14.5 Another Columnar Model	199
15 Afterword	203
Notes	209
Exercises	215
References	219
Index of Notation	230
Index	235
