

C. Truesdell

The Elements of Continuum Mechanics

Springer-Verlag
New York Berlin Heidelberg Tokyo

Contents

Part I. General Principles

1.	Bodies and Motions.	1
2.	Kinematics. Changes of Frame.	17
3.	Forces. Constitutive Equations. Simple Materials.	26
4.	Reduced Constitutive Equations. Internal Constraints.	39
5.	Homogeneous Motions of Simple Bodies.	47
6.	The Isotropy Group. Solids, Isotropic Materials, Fluids, Fluid Crystals.	56
7.	Motions with Constant Stretch History.	65

Part II. Fluids

8.	The Stress System in Viscometric Flows of Incompressible Fluids.	73
9.	Dynamical Conditions in Viscometric Flows.	80
10.	Impossibility of Rectilinear Flow in Pipes.	92

Part III. Elastic Materials

11.	Elastic Materials.	98
12.	Normal Tensions in Simple Shear of Isotropic Bodies.	110
13.	Some Non-homogeneous Deformations of Isotropic Incompressible Materials.	117
14.	Infinitesimal Deformations.	129
15.	Iterative Solutions in Elasticity.	137
16.	Inequalities for Isotropic Materials.	146
17.	A General Inequality.	155
18.	Wave Propagation.	161
19.	Infinitesimal Stability and Uniqueness.	174
20.	Hyperelastic Materials.	182
21.	Work Theorems in Hyperelasticity.	190

Part IV. Fading Memory

22.	Principles of Fading Memory.	199
23.	Positions for the Classical Theories of Continua.	205
24.	The Incompressible Fluid of Second Grade.	216
25.	Secondary Flows in Pipes.	222

Part V. Thermodynamics

26.	Thermodynamics of Homogeneous Processes.	231
27.	Thermodynamics of Simple Materials.	242
28.	Waves in Materials with Fading Memory.	256

Part . Statics

29.	Stability in Energy. Variational Theorems.	265
30.	Thermoelastic Equilibrium.	273
