

THE LIFE
OF
LORD KELVIN

BY
SILVANUS P. THOMPSON

IN TWO VOLUMES
VOL. I

CHELSEA PUBLISHING COMPANY
NEW YORK, N.Y.

CONTENTS

CHAPTER I

CHILDHOOD, AND UPRISING AT GLASGOW

	PAGES
Birth, June 26, 1824, 1; Thomsons of Ballymahinch, County Down, 1; James Thomson, LL.D., of Belfast, and his Family, 2; Migration to Glasgow as Professor of Mathematics, 6; Boyhood of William Thomson, 7; Matriculation, at age of 10, into Glasgow University, 8; Gains Medal for Mathematical Essay on the Figure of the Earth, 9; Reminiscences of Old Glasgow College Days, 11; Prof. J. Pringle Nichol, 12; Visits to Paris and Frankfort, 15; Fourier's Book and Faraday Fire, 17. APPENDIX: The Visit to Frankfort, 20; the Thomson <i>gent</i> at Glasgow, 21	1-22

CHAPTER II

CAMBRIDGE

Enters St. Peter's College, Cambridge, April 6, 1841, 25; Reminiscences of Canon Grenside, 25; First Paper to the <i>Cambridge Mathematical Journal</i> , 25; Tutors, Cookson and Hopkins, 27; Rooms in College, 28; Letters to his Father and Sister, 29; Sage Advice from Home, 29; Boating, 31; A Party at Hopkins's, 32; Thomson buys a Boat, 36; Gains the Gisborne Scholarship, 40; Papers for the <i>Cambridge Mathematical Journal</i> , 41; Gains a Mathematics Prize, 46; Falls under the Fascination of Music, 47; Prof. James Thomson's Ambition, 48; A Cambridge Diary, 49; Joins the Peterhouse Boat, 58; Rowing Reminiscences, 59; Wins the Colquhoun Silver Sculls, 61; Foundation and Rise of the Cambridge University Musical Society, 69; Rev. J. A. I. Airey's Reminiscences, 74; Hopkins's Reading Party at Cromer, 78;
--

Projects Series of Essays on the Mathematical Theory of Electricity, 83 ; The Senate-House Examination, 90 ; Results of the Senate-House and Smith's Prize Examinations, 97 ; Parkinson's Face, 98 ; Prizes, 109 ; Reminiscences of the Senate-House Examination, 110	23-112
---	--------

CHAPTER III

POST-GRADUATE STUDIES AT PARIS AND PETERHOUSE

Termination of Degree Course, 113 ; Green's Essay, 114 ; Travels to Paris, 114 ; Introductions and Studies in Paris, 116 ; Meets Liouville, 117 ; Meets Regnault, 122 ; Enters Regnault's Laboratory, 124 ; Dynamical Notions and Ideas about Electricity, 130 ; Studies Clapeyron's Paper, 132 ; Returns to Cambridge, 134 ; Meets Faraday, 134 ; Elected a Foundation Fellow of Peterhouse, 134 ; Assumes Editorship of the <i>Cambridge Mathematical Journal</i> , 135 ; Establishes Consistency between the Laws of Coulomb and Discovery of Faraday, 141 ; Contribution to B.A. 1845 Meeting, 144 ; Letters to Faraday, 146 ; Communicates Principle of Electrical Images to Liouville, 151 ; Appointed College Lecturer in Mathematics at Peterhouse, 156 ; Vacancy of Natural Philosophy Chair at Glasgow, 160	113-160
---	---------

CHAPTER IV

THE GLASGOW CHAIR

The Chair of Natural Philosophy, 161 ; Collecting Testimonials, 163 ; Announces his Candidature, 164 ; Other Candidates, 167 ; Thomson's Testimonials, 167 ; The Appointment, 184 ; Inaugural Dissertation, <i>De Caloris Distributione</i> , 184 ; The Father's Delight, 188	161-189
---	---------

CHAPTER V

THE YOUNG PROFESSOR

Enters upon the Duties of the Chair, 190 ; The Introductory Lecture, 190 ; Inadequateness of the Apparatus for Teaching, 193 ; Improvement of his Department, 194 ; Original Work, 196 ; Elected a Member of the Philosophical Society of Glasgow, 198 ;
--

CONTENTS

xv

PAGES

Fellow of the Royal Society of Edinburgh, 199; Summer Attractions and Work, 199; Visit to Paris and Switzerland, 205; Scientific Work, 207; Death of Professor James Thomson, 209; First Communication to the Royal Society, 210; Views on Diamagnetic Forces, 214; Tour in Scandinavia, 218; Revisits Paris, 223; Work on Thermodynamics, 225; Fellowship of the Royal Society, 226; Absolute Units, 227; The Dissipation of Energy, 230; Marriage to Margaret Cram, 233; President of Physical Section of B.A., 234; Trip to the Mediterranean, 238.	
APPENDIX: Introductory Lecture to the Course on Natural Philosophy, 239	190-251

CHAPTER VI

THERMODYNAMICS

James Prescott Joule, 253; Heat and Temperature, 253; "Caloric," 254; Carnot's Treatise, 256; Clapeyron's Exposition, 259; Joule's Investigations, 260; The B.A. 1847 Meeting, 263; Joule's Version, 263; Thomson's Version, 264; Thomson's Doubts, 266; "Energy," 271; Carnot's Coefficient, 273; The Lowering of the Freezing-Point of Water by Pressure, 275; Carnot does not deny the Transformation of Heat into Work, 277; Rankine and Clausius, 277; Thomson's Work, 280; The Laws of Equivalence and Transformation, 281; The Joule-Thomson Effect, 285; Maxwell's Demons, 286; Helmholtz and the Conservation of Energy, 287; Thomson's Contribution, 289; Controversy over Various Claims, 291; Experimental Investigations, 292; Available Energy, 293	252-295
---	---------

CHAPTER VII

THE LABORATORY

A Lack of Necessary Data, 296; The First Physical Laboratory for Students, 297; Early Laboratory Work, 298; Thomson and Stokes, 299; Explanation of Foucault's Experiments on Spectra, 300; Laboratory Work, 304; Advice sought by Clerk Maxwell, 304; Illness of Mrs. Thomson, 305; Scientific Work, 306; Visit to Creuznach, 308; Meets Helmholtz, 310; Friday Evening Discourse at the Royal Institution, 312; The Bakerian Lecture, 317; Return to Creuznach and Schwalbach, 320; Letters to Helmholtz, 321; Thomson and Thackeray, 324	296-324
---	---------

CHAPTER VIII

THE ATLANTIC TELEGRAPH: FAILURE

PAGE

The Electric Telegraph, 326; Submarine Cables, 327; Transmission of Signals by Cables, 328; The Law of Squares, 329; Methods of Signalling, 332; Foundation of the Atlantic Telegraph Company, 338; Thomson's Anomalous Position, 338; How the Cable was made, 339; Research on the Conductivity of Copper, 340; Whitehouse's Inventions, 341; The Cable Squadron, <i>Agamemnon</i> and <i>Niagara</i> , 343; Breaking of the Cable, 344; Discussions of Cable Problems, 344; Thomson's Galvanometer, 347; Conductivity of the Cable, 349; First Testing Laboratory in Factory, 351; 1858: Preliminary Trip, 353; The Expedition sails, 357; Paying-out begun, 358; Return to Queenstown, 358; A Second Attempt succeeds, 359; Reminiscences of a Member of the Electrical Staff, 360; Wild Rejoicings, 365; Thanks from the Directors, 366; How not to work a Cable, 367; Termination of Whitehouse's Appointment, 368; Enfeeblement of the Cable, 372; Failure of the Cable, 374; Whitehouse and the Directors, 374; The Last Signals, 384; Committee of Inquiry, 385; Thomson's Welcome in Glasgow, 388; A Noble Speech, 389	325-396
---	---------

CHAPTER IX

STRENUOUS YEARS.

Impracticability of Electric Power, 397; Atmospheric Electricity, 399; Letters to Helmholtz, 401; Volunteer Rifle Movement, 405; Discourse at the Royal Institution on Atmospheric Electricity, 407; Tait appointed to the Natural Philosophy Chair at Edinburgh, 408; Thomson and Fleming Jenkin, 409; Thomson's Accident, 412; The Green-Books, 415; The Electrical Standards Committee, 417; Donald MacFarlane, 420; Proposed Treatise on Natural Philosophy, 421; Helmholtz's Reminiscences of a Visit to Glasgow, 429; Honorary Degree at Cambridge, 437; The Rede Lecture, 437; Honorary Degree at Oxford, 443; Prof. Ayrton's Reminiscences, 445	397-446
---	---------

CHAPTER X

THE EPOCH-MAKING TREATISE

	PAGE
Existing Books, 447; Tait, 449; Origin of the Collaboration, 451; Skeleton of the Treatise, 454; Suggestion of a Shorter Elementary Work, 457; Correspondence, 458; Progress, 465; The Glasgow Pamphlet, 466; Prof. Ayrton's Recollections, 466; Delays, 467; Publication of Volume I., 467; Characteristic Features of the Book, 468; A German Translation, 471; Inadequate Remuneration of the Authors, 473; A Second Edition, 474; Abandonment of farther Volumes, 474; Appreciation of Tait, 478; The Unseen Universe, 479; Reprint of Newton's <i>Principia</i> , 480	447-480

CHAPTER XI

THE ATLANTIC TELEGRAPH: SUCCESS

Reviving the Project, 481; Improvements since 1858, 482; The Cable, 482; The <i>Great Eastern</i> , 482; The Expedition, 484; Faults and Failure, 485; Attempt to Raise the Cable, 486; Work for a New Cable, 489; Laying Commenced, 491; The <i>Great Eastern Telegraph and Test-Room Chronicle</i> , 492; Completion, 493; Rejoicings, 493; Raising the 1865 Cable, 495; Completion of the 1865 Cable, 496; Latimer Clark's and Collett's Experiments, 496; Congratulations, 498; Honours, 499; City of London Banquet, 501; Freedom of the City of Glasgow, 502; Knighthood Conferred, 505; Lecture at the Glasgow Athenæum, 506	481-508
---	---------

CHAPTER XII

LABOUR AND SORROW

The Structure of Matter, 509; Helmholtz's Paper on Vortex Motion, 510; First Paper on Vortex-Atoms, 513; Letter to Helmholtz, 513; Other Work, 519; The "Replenisher," 521; Death of Faraday, 522; Incidents at the B.A. Meeting of 1867, 523; Determination of "a," 524; Lady Thomson's Health, 526; Project of the French Atlantic Cable, 527; Lady Thomson grows worse, 531; Death of Lady Thomson, 532; Lady Thomson's Poems, 533	509-554
---	---------

CHAPTER XIII

THE GEOLOGICAL CONTROVERSY

	PAGES
The Solidity of the Earth, 535 ; Age of the Earth, 535 ; His Claim as a Naturalist, 536 ; The Age of the Sun's Heat and the Secular Cooling of the Earth, 537 ; "Uniformitarianism," 537 ; Doctrine of Uniformity Refuted, 540 ; Geological Time, 540 ; Challenges the Huttonian Theory, 541 ; Huxley's Address to the Geological Society, 544 ; Thomson's Reply, 547	535-554

CHAPTER XIV

LATER TELEGRAPHIC WORK : THE SIPHON RECORDER

The French Atlantic Cable, 552 ; Thomson and Varley and Jenkin, 552 ; Lord Stanley, Rector of Glasgow University, 553 ; First-fruits of the Inventions, 554 ; The "Thomson Experimental Scholarships," 555 ; Parliamentary Representation, 557 ; An Offer from Cambridge, 558 ; The Cambridge Chair, 563 ; "The Size of Atoms," 566 ; Removal of Glasgow University to Gilmore Hill, 568 ; The Siphon Recorder, 570 ; First Exhibition in England, 575 ; The <i>Lalla Rookh</i> , 580 ; Admiralty Committee on the Design of Ships of War, 583	552-584
--	---------
