|                                                                                           |     |
|-------------------------------------------------------------------------------------------|-----|
| INTRODUCTION.....                                                                         | 1   |
| 1. Plancherel's Theorem.....                                                              | 1   |
| 2. The Fourier Transform of a Function Vanishing Exponentially.....                       | 3   |
| 3. The Fourier Transform of a Function in a Strip.....                                    | 3   |
| 4. The Fourier Transform of a Function in a Half-Plane.....                               | 8   |
| 5. Theorems of the Phragmén-Lindelöf Type.....                                            | 9   |
| 6. Entire Functions of Exponential Type.....                                              | 12  |
| CHAPTER I. QUASI-ANALYTIC FUNCTIONS.....                                                  | 14  |
| 7. The Problem of Quasi-Analytic Functions.....                                           | 14  |
| 8. Proof of the Fundamental Theorem on Quasi-Analytic Functions.....                      | 17  |
| 9. Proof of Carleman's Theorem.....                                                       | 20  |
| 10. The Modulus of the Fourier Transform of a Function Vanishing for Large Arguments..... | 24  |
| CHAPTER II. SAIER'S THEOREM.....                                                          | 26  |
| 11. Certain Theorems of Closure.....                                                      | 26  |
| 12. Sailer's Theorem.....                                                                 | 32  |
| CHAPTER III. CERTAIN INTEGRAL EXPANSIONS.....                                             | 37  |
| 13. The Integral Equations of Laplace and Plancherel.....                                 | 37  |
| 14. The Integral Equation of Stieltjes.....                                               | 41  |
| 15. An Asymptotic Series.....                                                             | 44  |
| 16. Watson Transform.....                                                                 | 44  |
| CHAPTER IV. A CLASS OF SINGULAR INTEGRAL EQUATIONS.....                                   | 49  |
| 17. The Theory of Hopf and Wiener.....                                                    | 49  |
| 18. A Note on the Volterra Equation.....                                                  | 58  |
| 19. A Theorem of Hardy.....                                                               | 61  |
| CHAPTER V. ENTIRE FUNCTIONS OF THE EXPONENTIAL TYPE.....                                  | 68  |
| 20. Classical Theorems Concerning Entire Functions.....                                   | 68  |
| 21. A Tauberian Theorem Concerning Entire Functions.....                                  | 70  |
| 22. A Condition that the Roots of an Entire Function be Real.....                         | 75  |
| 23. A Theorem on the Riemann Zeta Function.....                                           | 75  |
| 24. Some Theorems of Titchmarsh.....                                                      | 78  |
| 25. A Theorem of Pólya.....                                                               | 81  |
| 26. Another Theorem of Pólya.....                                                         | 83  |
| CHAPTER VI. THE CLOSURE OF SETS OF COMPLEX EXPONENTIAL FUNCTIONS.....                     | 86  |
| 27. Methods from the Theory of Entire Functions.....                                      | 86  |
| 28. The Duality between Closure and Independence.....                                     | 95  |
| CHAPTER VII. NON-HARMONIC FOURIER SERIES AND A GAP THEOREM.....                           | 100 |
| 29. A Theorem Concerning Closure.....                                                     | 100 |
| 30. Non-Harmonic Fourier Series.....                                                      | 108 |
| 31. A New Class of Almost Periodic Functions.....                                         | 116 |
| 32. Theorems on Lacunary Series.....                                                      | 123 |
| CHAPTER VIII. GENERALIZED HARMONIC ANALYSIS IN THE COMPLEX DOMAIN.....                    | 128 |
| 33. Relevant Theorems of Generalized Harmonic Analysis.....                               | 128 |
| 34. Cauchy's Theorem.....                                                                 | 130 |
| 35. Almost Periodic Functions.....                                                        | 138 |
| CHAPTER IX. RANDOM FUNCTIONS.....                                                         | 140 |
| 36. Random Functions.....                                                                 | 140 |

|                                                               |     |
|---------------------------------------------------------------|-----|
| 37. The Fundamental Random Function .....                     | 146 |
| 38. The Continuity Properties of a Random Function .....      | 157 |
| CHAPTER X. THE HARMONIC ANALYSIS OF RANDOM FUNCTIONS .....    | 163 |
| 39. The Ergodic Theorem .....                                 | 163 |
| 40. The Theory of Transformations .....                       | 168 |
| 41. The Harmonic Analysis of Random Functions .....           | 170 |
| 42. The Zeros of a Random Function in the Complex Plane ..... | 172 |
| BIBLIOGRAPHY .....                                            | 179 |
| INDEX .....                                                   | 183 |
