PREFACE TO THE THIRD GERMAN EDITION	v
-------------------------------------	---

FIRST LECTURE

The Definition of Probability

Amendment of Popular Terminology	1
Explanation of Words	2
Synthetic Definitions	3
Terminology	4
The Concept of Work in Mechanics	5
An Historical Interlude	6
The Purpose of Rational Concepts	6
The Inadequacy of Theories	7
Limitation of Scope	8
Unlimited Repetition	10
The Collective	11
The First Step towards a Definition	12
Two Different Pairs of Dice	13
Limiting Value of Relative Frequency	14
The Experimental Basis of the Theory of Games	16
The Probability of Death	16
First the Collective—then the Probability	18
Probability in the Gas Theory	20
An Historical Remark	21
Randomness	23
Definition of Randomness: Place Selection	24
The Principle of the Impossibility of a Gambling System	25
Example of Randomness	27
Summary of the Definition	28

SECOND LECTURE

The Elements of the Theory of Probability

The Theory of Probability is a Science Similar to Others	30
The Purpose of the Theory of Probability	31
The Beginning and the End of Each Problem must be Probabilities	32
Distribution in a Collective	34
Probability of a Hit; Continuous Distribution	35
Probability Density	36
The Four Fundamental Operations	38
First Fundamental Operation: Selection	39

CONTENTS

Second Fundamental Operation: Mixing	39
Inexact Statement of the Addition Rule	40
Uniform Distribution	41
Summary of the Mixing Rule	43
Third Fundamental Operation: Partition	43
Probabilities after Partition	45
Initial and Final Probability of an Attribute	46
The So-called Probability of Causes	46
Formulation of the Rule of Partition	47
Fourth Fundamental Operation: Combination	48
A New Method of Forming Partial Sequences: Correlated Sampling	49
Mutually Independent Collectives	50
Derivation of the Multiplication Rule	51
Test of Independence	53
Combination of Dependent Collectives	55
Example of Noncombinable Collectives	56
Summary of the Four Fundamental Operations	57
A Problem of Chevalier de Méré	58
Solution of the Problem of Chevalier de Méré	59
Discussion of the Solution	62
Some Final Conclusions	63
Short Review	64

THIRD LECTURE

Critical Discussion of the Foundations of Probability

The Classical Definition of Probability	66
Equally Likely Cases . . .	68
. . . Do Not Always Exist	69
A Geometrical Analogy	70
How to Recognize Equally Likely Cases	71
Are Equally Likely Cases of Exceptional Significance?	73
The Subjective Conception of Probability	75
Bertrand's Paradox	77
The Suggested Link between the Classical and the New Definitions of Probability	79
Summary of Objections to the Classical Definition	80
Objections to My Theory	81
Finite Collectives	82
Testing Probability Statements	84
An Objection to the First Postulate	86
Objections to the Condition of Randomness	87
Restricted Randomness	89
Meaning of the Condition of Randomness	91
Consistency of the Randomness Axiom	92
A Problem of Terminology	93
Objections to the Frequency Concept	94
Theory of the Plausibility of Statements	95
The Nihilists	97
Restriction to One Single Initial Collective	98
Probability as Part of the Theory of Sets	99
Development of the Frequency Theory	101
Summary and Conclusion	102

FOURTH LECTURE

The Laws of Large Numbers

Poisson's Two Different Propositions	104
Equally Likely Events	106
Arithmetical Explanation	107
Subsequent Frequency Definition	109
The Content of Poisson's Theorem	110
Example of a Sequence to which Poisson's Theorem does not Apply	111
Bernoulli and non-Bernoulli Sequences	112
Derivation of the Bernoulli-Poisson Theorem	113
Summary	115
Inference	116
Bayes's Problem	117
Initial and Inferred Probability	118
Longer Sequences of Trials	120
Independence of the Initial Distribution	122
The Relation of Bayes's Theorem to Poisson's Theorem	124
The Three Propositions	125
Generalization of the Laws of Large Numbers	125
The Strong Law of Large Numbers	127
The Statistical Functions	129
The First Law of Large Numbers for Statistical Functions	131
The Second Law of Large Numbers for Statistical Functions	132
Closing Remarks	133

FIFTH LECTURE

Application in Statistics and the Theory of Errors

What is Statistics?	135
Games of Chance and Games of Skill	136
Marbe's 'Uniformity in the World'	138
Answer to Marbe's Problem	139
Theory of Accumulation and the Law of Series	141
Linked Events	142
The General Purpose of Statistics	144
Lexis' Theory of Dispersion	145
The Mean and the Dispersion	146
Comparison between the Observed and the Expected Variance	148
Lexis' Theory and the Laws of Large Numbers	149
Normal and Nonnormal Dispersion	151
Sex Distribution of Infants	152
Statistics of Deaths with Supernormal Dispersion	153
Solidarity of Cases	154
Testing Hypotheses	155
R. A. Fisher's 'Likelihood'	157
Small Sample Theory	158
Social and Biological Statistics	160
Mendel's Theory of Heredity	160
Industrial and Technological Statistics	161
An Example of Faulty Statistics	162
Correction	163
Some Results Summarized	165

CONTENTS

Descriptive Statistics	166
Foundations of the Theory of Errors	167
Galton's Board	169
Normal Curve	170
Laplace's Law	171
The Application of the Theory of Errors	172

SIXTH LECTURE

Statistical Problems in Physics

The Second Law of Thermodynamics	174
Determinism and Probability	175
Chance Mechanisms	177
Random Fluctuations	178
Small Causes and Large Effects	179
Kinetic Theory of Gases	181
Order of Magnitude of 'Improbability'	183
Criticism of the Gas Theory	184
Brownian Motion	186
Evolution of Phenomena in Time	187
Probability 'After-Effects'	188
Residence Time and Its Prediction	189
Entropy Theorem and Markoff Chains	192
Svedberg's Experiments	194
Radioactivity	195
Prediction of Time Intervals	197
Marsden's and Barratt's Experiments	198
Recent Development in the Theory of Gases	199
Degeneration of Gases: Electron Theory of Metals	200
Quantum Theory	202
Statistics and Causality	203
Causal Explanation in Newton's Sense	204
Limitations of Newtonian Mechanics	206
Simplicity as a Criterion of Causality	208
Giving up the Concept of Causality	209
The Law of Causality	210
New Quantum Statistics	211
Are Exact Measurements Possible?	213
Position and Velocity of a Material Particle	214
Heisenberg's Uncertainty Principle	215
Consequences for our Physical Concept of the World	217
Final Considerations	218
SUMMARY OF THE SIX LECTURES IN SIXTEEN PROPOSITIONS	221
NOTES AND ADDENDA	224
SUBJECT INDEX	237
NAME INDEX	243
