List of Figures	xv
List of Tables	xvii
Preface	xix
Suggestions for Reading	xxiii
List of Notation	xxv
 I Guide	 1
1 Essentials	3
1.1 ScaLAPACK	3
1.2 Structure and Functionality	3
1.3 Software Components	4
1.3.1 LAPACK	4
1.3.2 BLAS	5
1.3.3 PBLAS	5
1.3.4 BLACS	6
1.4 Efficiency and Portability	6
1.5 Availability	7
1.6 Commercial Use	8
1.7 Installation	8

1.8	Documentation	9
1.9	Support	10
1.10	Errata	10
1.11	Related Projects	10
1.12	Contents of the CD-ROM	11
2	Getting Started with ScaLAPACK	13
2.1	How to Run an Example Program Using MPI	13
2.2	Source Code for Example Program #1	15
2.3	Details of Example Program #1	19
2.3.1	Simplifying Assumptions Used in Example Program	22
2.3.2	Notation Used in Example Program	22
2.3.3	Output of Example Program #1 Using MPI	23
2.3.4	Output of Example Program #1 Using PVM	24
2.4	Four Basic Steps Required to Call a ScaLAPACK Routine	25
2.4.1	Initialize the Process Grid	25
2.4.2	Distribute the Matrix on the Process Grid	26
2.4.3	Call the ScaLAPACK Routine	27
2.4.4	Release the Process Grid	27
3	Contents of ScaLAPACK	29
3.1	Structure of ScaLAPACK	29
3.1.1	Levels of Routines	29
3.1.2	Data Types and Precision	30
3.1.3	Naming Scheme	30
3.2	Driver Routines	32
3.2.1	Linear Equations	32
3.2.2	Linear Least Squares Problems	33
3.2.3	Standard Eigenvalue and Singular Value Problems	34
3.2.3.1	Symmetric Eigenproblems	34

3.2.3.2	Singular Value Decomposition	35
3.2.4	Generalized Symmetric Definite Eigenproblems (GSEP)	36
3.3	Computational Routines	36
3.3.1	Linear Equations	36
3.3.2	Orthogonal Factorizations and Linear Least Squares Problems	41
3.3.2.1	QR Factorization	41
3.3.2.2	LQ Factorization	42
3.3.2.3	QR Factorization with Column Pivoting	43
3.3.2.4	Complete Orthogonal Factorization	43
3.3.2.5	Other Factorizations	44
3.3.3	Generalized Orthogonal Factorizations	44
3.3.3.1	Generalized QR Factorization	44
3.3.3.2	Generalized RQ factorization	46
3.3.4	Symmetric Eigenproblems	47
3.3.5	Nonsymmetric Eigenproblems	48
3.3.5.1	Eigenvalues, Eigenvectors, and Schur Factorization	48
3.3.6	Singular Value Decomposition	49
3.3.7	Generalized Symmetric Definite Eigenproblems	51
3.4	Orthogonal or Unitary Matrices	52
3.5	Algorithmic Differences between LAPACK and ScaLAPACK	52
4	Data Distributions and Software Conventions	54
4.1	Basics	54
4.1.1	Process Grid	55
4.1.2	Contexts	56
4.1.3	Scoped Operations	57
4.2	Array Descriptors	57
4.3	In-core Dense Matrices	58
4.3.1	The Two-dimensional Block-Cyclic Distribution	58
4.3.2	Local Storage Scheme and Block-Cyclic Mapping	61

4.3.3	Array Descriptor for In-core Dense Matrices	65
4.3.4	Example	66
4.3.5	Submatrix Argument Descriptions	67
4.3.6	Matrix and Vector Storage Conventions	69
4.4	In-Core Narrow Band and Tridiagonal Matrices	70
4.4.1	The Block Column and Row Distributions	70
4.4.2	The Block Mapping	71
4.4.3	Local Storage Scheme for Narrow Band Matrices	74
4.4.4	Local Storage Schemes for Tridiagonal Matrices	76
4.4.5	Array Descriptor for Narrow Band and Tridiagonal Matrices	78
4.4.6	Array Descriptor for the Matrix of Right-Hand-Side Vectors	78
4.4.7	Argument Descriptions for Band and Tridiagonal Routines	79
4.4.8	Matrix Storage Conventions for Band and Tridiagonal Matrices	84
4.5	Out-of-Core Matrices	84
4.5.1	Array Descriptor for Out-core Dense Matrices	84
4.6	Design and Documentation of Argument Lists	85
4.6.1	Structure of the Documentation	85
4.6.2	Order of Arguments	86
4.6.3	Option Arguments	86
4.6.4	Problem Dimensions	88
4.6.5	Workspace Issues	88
4.6.5.1	WORK Arrays	88
4.6.5.2	LWORK Query	88
4.6.5.3	LWORK $\geq$ WORK(1)	88
4.6.6	Error Handling and the Diagnostic Argument INFO	89
4.6.7	Alignment Restrictions	89
4.7	Extensions	90
5	Performance of ScaLAPACK	91
5.1	Achieving High Performance with ScaLAPACK	91

5.1.1	Achieving High Performance on a Distributed Memory Computer	91
5.1.2	Achieving High Performance on a Network of Workstations	92
5.2	Performance, Portability and Scalability	93
5.2.1	The BLAS as the Key to (Trans)portable Efficiency	93
5.2.2	Two-Dimensional Block Cyclic Data Distribution as a Key to Load Balancing and Software Reuse	94
5.2.3	BLACS as an Efficient, Portable and Adequate Message-Passing Interface . .	94
5.2.3.1	Parallel Efficiency	95
5.2.4	ScaLAPACK Performance	98
5.2.5	Performance of Selected BLACS and Level 3 BLAS Routines	99
5.2.5.1	Performance of Selected PBLAS routines	101
5.2.5.2	Solution of Common Numerical Linear Algebra Problems	101
5.2.6	Solving Linear Systems of Equations	104
5.2.6.1	Solving Linear Least Squares Problems	104
5.2.6.2	Eigenvalue Problems	108
5.3	Performance Evaluation	113
5.3.1	Obtaining High Performance with ScaLAPACK Codes	113
5.3.2	Checking the BLAS and BLACS Libraries	113
5.3.3	Estimate Execution Time	114
5.3.4	Determine Whether Reasonable Performance Is Achieved	114
5.3.5	Identify Performance Bottlenecks	115
5.3.6	Performance Bottlenecks in the Expert Symmetric Eigenproblem Drivers . .	115
5.4	Performance Improvement	116
5.4.1	Choosing a Faster BLACS Library	116
5.4.2	Choosing a Faster BLAS Library	117
5.4.3	Tuning the Distribution Parameters for Better Performance	117
5.5	Performance of Banded and Out-of-Core Drivers	119
6	Accuracy and Stability	120
6.1	Sources of Error in Numerical Calculations	121

6.2	New Sources of Error in Parallel Numerical Computations	124
6.3	How to Measure Errors	126
6.4	Further Details: How Error Bounds Are Derived	131
6.4.1	Standard Error Analysis	131
6.4.2	Improved Error Bounds	132
6.5	Error Bounds for Linear Equation Solving	133
6.6	Error Bounds for Linear Least Squares Problems	136
6.7	Error Bounds for the Symmetric Eigenproblem	138
6.8	Error Bounds for the Singular Value Decomposition	141
6.8.1	Further Details: Error Bounds for the Singular Value Decomposition	142
6.9	Error Bounds for the Generalized Symmetric Definite Eigenproblem	144
7	Troubleshooting	149
7.1	Installation Debugging Hints	150
7.2	Application Debugging Hints	151
7.3	Common Errors in Calling ScaLAPACK Routines	152
7.4	Failures Detected by ScaLAPACK Routines	152
7.4.1	Invalid Arguments and PXERBLA	153
7.4.2	Computational Failures and INFO > 0	153
7.5	Wrong Results	154
7.6	Error Handling in the PBLAS	154
7.7	Error Handling in the BLACS	155
7.7.1	BLACS Warning and Error Messages	156
7.8	System Error Messages	157
7.9	Poor Performance	157
A	Index of ScaLAPACK Routines	159
A.1	Index of Driver and Computational Routines	159
A.2	Index of Auxiliary Routines	164
A.3	Matrix Redistribution/Copy Routines	170

A.3.1 Fortran Interface	170
A.3.2 C Interface	175
A.3.3 Code Fragment Calling C Interface Cpdgemr2d	175
B Call Conversion: LAPACK to ScaLAPACK and BLAS to PBLAS	176
B.1 Translating BLAS-based programs to the PBLAS	176
B.2 Translating LAPACK-based programs to ScaLAPACK	177
B.2.1 Sequential LU Factorization	178
B.2.2 Parallel LU Factorization	179
C Example Programs	181
C.1 Example Program #2	181
C.2 HPF Interface to ScaLAPACK	197
D Quick Reference Guides	199
D.1 ScaLAPACK Quick Reference Guide	199
D.2 Quick Reference Guide to the PBLAS	202
D.3 Quick Reference Guide to the BLACS	206
Glossary	213
 II Specifications of Routines	 217
 Bibliography	 305
 Index by Keyword	 314
 Index by Routine Name	 322
