

J. W. Neuberger

Sobolev Gradients and Differential Equations

Springer

Contents

Preface	v
Chapter 1. Several Gradients	1
Chapter 2. Comparison of Two Gradients	5
Chapter 3. Continuous Steepest Descent in Hilbert Space: Linear Case	11
Chapter 4. Continuous Steepest Descent in Hilbert Space: Nonlinear Case	15
1. Global Existence	15
2. Gradient Inequality	16
3. Convexity	23
4. Examples	27
5. Higher Order Sobolev Spaces for Lower Order Problems	29
Chapter 5. Orthogonal Projections, Adjoints and Laplacians	33
1. A Construction of a Sobolev Space.	33
2. A Formula of Von Neumann	35
3. Relationship between Adjoints	36
4. General Laplacians	37
5. A Generalized Lax-Milgram Theorem	38
6. Laplacians and Closed Linear Transformations	39
7. Remarks on Higher Order Sobolev Spaces	42
Chapter 6. Introducing Boundary Conditions	43
1. Projected Gradients	43
2. Approximation of Projected Gradients	48
3. Singular Boundary Value Problems	49
4. Dual Steepest Descent	50
5. Multiple Solutions of Some Elliptic Problems	51
Chapter 7. Newton's Method in the Context of Sobolev Gradients	53
1. Newton Directions From an Optimization.	53
2. Generalized Inverses and Newton's Method.	55
Chapter 8. Finite Difference Setting: the Inner Product Case	59
Chapter 9. Sobolev Gradients for Weak Solutions: Function Space Case	69

Chapter 10. Sobolev Gradients in Non-inner Product Spaces: Introduction	75
Chapter 11. The Superconductivity Equations of Ginzburg-Landau	79
1. Introduction	79
2. The GL Functional	79
3. A Simple Example of a Sobolev Gradient	80
4. A Sobolev Gradient for GL	81
5. Finite Dimensional Emulation	83
6. Numerical Results	84
7. A Liquid Crystal Problem	85
8. An Elasticity Problem	85
9. Singularities for a Simpler GL functional	86
10. Some Plots	88
Chapter 12. Minimal Surfaces	93
1. Introduction	93
2. Minimum Curve Length	93
3. Minimal Surfaces	95
4. Uniformly Parameterized Surfaces	99
5. Numerical Methods and Test Results	102
6. Conclusion	106
Chapter 13. Flow Problems and Non-inner Product Sobolev Spaces	107
1. Full Potential Equation	107
2. A Linear Mixed-Type Problem	110
3. Other Codes for Transonic Flow	110
4. Transonic Flow Plots	112
Chapter 14. Foliations as a Guide to Boundary Conditions	115
1. A Foliation Theorem	115
2. Another Solution Giving Nonlinear Projection	123
Chapter 15. Some Related Iterative Methods for Differential Equations	125
Chapter 16. A Related Analytic Iteration Method	125
Chapter 17. Steepest Descent for Conservation Equations	129
Chapter 18. A Sample Computer Code with Notes	141
Bibliography	145
Index	150
