

Stevo Todorćević

Topics in Topology

Springer

CONTENTS

I COMPACT SETS IN FUNCTION SPACES	1
1 Topology of pointwise convergence.....	3
2 A theorem of Eberlein.....	8
3 Pták's Lemma.....	12
4 Namioka's theorem.....	17
5 Rosenthal's dichotomy.....	20
6 Properties of Baire and Ramsey.....	25
7 Baire property of analytic sets.....	29
8 Baire property of filters and ideals.....	32
9 Selective coideals.....	35
10 Baire's characterization theorem and its corollaries.....	41
11 Borel sets.....	46
12 A selective analytic ideal.....	49
13 Bourgain-Fremlin-Talagrand's theorem.....	55
References for Chapter I.....	59
II THE SEMIGROUP $\beta\mathbb{N}$	61
14 A space of ultrafilters.....	63
15 Glazer's Theorem.....	67
16 A topological proof of the van der Waerden theorem.....	71
17 A semigroup of variable words.....	75
References for Chapter II.....	78
III COMPACT AND COMPACTLY GENERATED GROUPS ...79	
18 Countable chain conditions of topological groups.....	81
19 Michael's selection theorem.....	87
20 Inverse systems.....	91
21 Haydon's theorem.....	95
22 Quotient groups.....	99
23 A decomposition of compact groups.....	105
24 Pestov's theorems.....	109
25 Free topological groups.....	113
References for Chapter III.....	119
IV HYPERSPACES	121
26 Exponentially complete spaces.....	123
27 Vaught's homeomorphism theorem.....	127
28 Resolving a space: Accumulation orders and spectra.....	130
29 Accumulation spectra of hyperspaces.....	135
30 List of all exponentials.....	139

31	Multiplication of accumulation orders.....	141
	References for Chapter IV	146
	Index	149
	Index of special symbols	152
