Contents

Introduction	page ix
Chapter 1 One Level Algorithms	1
1.1 Classical Alternating Schwarz Method	1
1.2 Approximate Solvers	18
1.3 Many Subdomains	19
1.4 Convergence Behavior	24
1.5 Implementation Issues	30
1.6 Variational Formulation	34
Chapter 2 Two Level Algorithms	41
2.1 Subdomain Solves Are Not Sufficient	41
2.2 A Simple Two Level Method	43
2.3 General Two Level Methods	45
2.4 Coarse Grid Corrections	48
2.5 Convergence Behavior	49
2.6 Implementation Issues	53
2.7 Fourier Analysis of Two Level Methods	57
2.8 Variational Formulation	61
Chapter 3 Multilevel Algorithms	67
3.1 Additive Multilevel Schwarz Methods	67
3.2 Multiplicative Multilevel Schwarz Methods	76
3.3 Full Multigrid	85
3.4 Practical Multilevel Methods	87
3.5 Multilevel Methods as Classical Jacobi and Gauss-Seidel	89
3.6 Complexity Issues	91
3.7 Implementation Issues	98
3.8 Variational Formulation	99
Chapter 4 Substructuring Methods	101
4.1 Direct Substructuring Methods	101
4.2 The Two Subdomain Case	110
4.3 Many Subdomains	124
4.4 Inexact Subdomain Solvers	141

4.5	Implementation Issues	144
4.6	Variational Formulation	144
Chapter 5	A Convergence Theory	149
5.1	Schwarz Framework	149
5.2	Abstract Convergence Analysis	153
5.3	Analysis of Standard Methods	161
5.4	Indefinite and Nonsymmetric Problems	185
Appendixes		
1	Preconditioners and Accelerators	195
A1.1	Simple Preconditioners	195
A1.2	Accelerators: Krylov Subspace Methods	197
2	Software for Numerical Parallel Computing	201
A2.1	Abstraction in Programming	201
A2.2	Abstract Data Types	204
A2.3	Our Standard Model for Parallel Computing	207
