Contents

Contributors	v
Preface	vii
Contents of Volume 1	ix
Notation	xi
Introduction <i>J. Serra</i>	1
1 Mathematical Morphology for Complete Lattices <i>J. Serra</i>	13
1.1 Basic properties of lattices	13
1.2 Dilation and erosion in a complete lattice	17
1.3 Morphological openings and closings	20
1.4 Dual aspect, the point of view of erosions	23
1.5 Monotone continuity in \mathcal{P} , \mathcal{I} and \mathcal{I}'	24
1.6 The semigroups $\Gamma_{\lambda+\mu} = \Gamma_{\lambda}\Gamma_{\mu}$	29
1.7 Examples	31
2 Mathematical Morphology for Boolean Lattices <i>J. Serra</i>	37
2.1 Summary of Boolean lattices	37
2.2 Structuring functions	40
2.3 Closings and size distributions	46
2.4 Families, $\Gamma_{\lambda}\Gamma_{\mu} \subset \Gamma_{\lambda+\mu}$ and induced metrics	47
2.5 The skeleton	49
2.6 Connectivity	51
2.7 Conclusions	57
3 Dilations on Topological Spaces <i>G. Matheron</i>	59
3.1 Review of algebraic frame	59
3.2 Upper semicontinuity	60
3.3 Lower semicontinuity	63
3.4 Open dilations	64
3.5 U.S.C. dilations null at infinity	66
3.6 Opening associated with a dilation	69
4 Examples of Structuring Functions and Their Uses <i>J. Serra</i>	71
4.1 Introduction	71
4.2 Euclidean morphology and its derivatives	72
4.3 Iterations of an arbitrary dilation	76
4.4 Metrics linked to connectivity and conditional dilations	79
4.5 Propagations	84
4.6 Template matching	88
4.7 Graphs and planar graphs	90

4.8	Partitions.....	94
4.9	Conclusion.....	98
5	Introduction to Morphological Filters <i>J. Serra</i>	101
5.1	History of development.....	101
5.2	Linear and morphological filtering.....	102
5.3	Theoretical framework.....	104
5.4	Opening and closing.....	105
5.5	Size distributions.....	108
5.6	How to generate an opening.....	109
5.7	Openings and increasing mappings.....	110
5.8	Conclusion.....	114
6	Filters and Lattices <i>G. Matheron</i>	115
6.0	Introduction and notation.....	115
6.1	Seven criteria.....	116
6.2	Structure of the invariance domain \mathcal{P}_g	120
6.3	Under- and overfilters.....	122
6.4	Characterization of the four envelopes.....	128
6.5	The middle element.....	132
6.6	Filters on $\mathcal{F}(E)$ or $\mathcal{S}(E)$	136
7	Strong Filters and Connectivity <i>G. Matheron and J. Serra</i>	141
7.1	Introduction.....	141
7.2	Closings that preserve connectivity.....	142
7.3	Closings that do not create connected components.....	144
7.4	Operations ν and ν_g	145
7.5	Partition closings.....	147
7.6	Strong partition filters.....	149
7.7	Extreme closings.....	151
7.8	The derived autodual filter.....	153
7.9	Algorithms.....	156
8	The Centre and Self-Dual Filtering <i>J. Serra</i>	159
8.1	Introduction.....	159
8.2	The centre and the Boolean lattice.....	161
8.3	The centre in distributive lattices.....	164
8.4	Examples of increasing sequences β^n	169
8.5	The centre and the middle element.....	171
8.6	How to obtain strong filters.....	175
8.7	An example.....	177
9	Dilation and Filtering for Numerical Functions <i>J. Serra</i>	181
9.1	Euclidean mappings.....	182
9.2	Umbræ and semicontinuity.....	183

9.3	Translational invariance.....	183
9.4	General structuring functions.....	185
9.5	Duality for complementation.....	186
9.6	Stereology.....	187
9.7	Compatibility under change of scale.....	189
9.8	Euclidean openings and closings of functions.....	190
9.9	λ -overfilters, dilations and rank filters.....	191
9.10	Implementations \mathbb{Z}^3 and in \mathbb{Z}^2	194
9.11	Example: Contour detection by closing.....	201
10	Alternating Sequential Filters <i>J. Serra</i>	203
10.1	Introduction.....	203
10.2	Definition of ASF.....	204
10.3	Properties of ASFs.....	206
10.4	Derived filters.....	208
10.5	Euclidean ASFs.....	211
10.6	Invariants: The comparison of different ASFs.....	211
10.7	Digitization.....	213
10.8	An example.....	214
11	Examples of Topological Properties of Skeletons <i>G. Matheron</i>	217
11.0	Introduction.....	217
11.1	The choice of a definition of the skeleton.....	218
11.2	The skeleton of an open set.....	221
11.3	Lower-semicontinuity of the skeleton $r(G)$	222
11.4	The function $\rho(x)$ and upstream, downstream and edge mappings...	224
11.5	Characterization of functions $\rho_{\mathbb{G}}$	229
11.6	The adherence \bar{r} of the skeleton.....	233
12	On the Negligibility of the Skeleton and the Absolute Continuity of Erosions <i>G. Matheron</i>	239
12.0	The objective of this chapter.....	239
12.1	Lipschitz functions in the space L^2	240
12.2	Consequences for the skeleton.....	252
12.3	The absolute continuity of erosions.....	255
13	Skeletons in Digital Spaces <i>F. Meyer</i>	257
13.0	Introduction: From continuity to digitalization.....	257
13.1	Visual study of an example.....	263
13.2	The distance function — the relief function.....	267
13.3	Crest points.....	269
13.4	Upstream generation.....	279
13.5	The properties of the skeleton.....	284
13.6	An example.....	294
13.7	Conclusion.....	296

14	Measurements on Numerical Functions <i>J. Serra</i>	297
14.1	Subgraphs of positive functions.....	297
14.2	Basic measurements in $\mathbb{R}^0 \times \mathbb{R}$: The general case.....	301
14.3	Implementation.....	306
14.4	Basic measurements: flat structuring elements.....	311
14.5	Conclusion: Dimensional analysis.....	314
15	Boolean Random Functions <i>J. Serra</i>	317
15.1	Introduction.....	317
15.2	Definition of a Boolean function.....	319
15.3	The characteristic functional $Q(B)$	320
15.4	The structure of random Boolean functions.....	323
15.5	The Boolean islands model.....	327
15.6	Convexity for Boolean islands.....	332
15.7	Stereology for Boolean islands.....	335
15.8	The rocky deeps model.....	337
15.9	How to test Boolean functions.....	338
16	Convexity and Symmetry: Part 1 <i>M. Jourlin and B. Lagot</i>	343
16.1	Introduction.....	343
16.2	Anisotropic transformations.....	343
16.3	Evolution of the structure of the boundary of an element of \mathcal{K}	348
16.4	Assymetry and convexity.....	353
16.5	Links with the next chapter.....	356
17	Convexity and Symmetry: Part 2 <i>G. Matheron and J. Serra</i>	359
17.1	Introduction.....	359
17.2	The pre-ordering \succ (B is more symmetric than B') in \mathcal{LCO}	360
17.3	The decomposition of a non-symmetric B in \mathbb{R}^2	366
17.4	Transposition to digital grids.....	370
17.5	The equation $C \odot C = 2B$	373
18	Boolean Texture Analysis and Synthesis <i>F. Preteux and M. Schmitt</i>	377
18.0	Introduction.....	377
18.1	Notation.....	377
18.2	Reminder.....	378
18.3	Characterization of Boolean textures.....	380
18.4	Analysis framework of BBFs.....	384
18.5	Subgraph and morphological dilation in \mathbb{R}^3	387
18.6	Simulation of basic Boolean functions.....	390
18.7	Texture analysis of the vertebral body.....	396
