Contents

CHAPTER 1

Elliptic functions

1. Doubling the arc of a lemniscate	1
2. The Euler addition theorem	7
3. Analytic continuation	11
4. Riemann regions	16
5. The Riemann surface of the function	
$\sqrt{a_0z^4 + a_1z^3 + a_2z^2 + a_3z + a_4}$	22
6. The elliptic integral of the first kind	29
7. The inverse function	31
8. The covering surface	37
9. The periods	40
10. The period parallelogram	48
11. The $\wp$ -function	56
12. Partial fractions expansion of the $\wp$ -functions	61
13. The inversion problem	66
14. The field of elliptic functions	70
15. The addition theorem	80
16. Degenerate elliptic functions	85

CHAPTER 2

Uniformization

1. Algebraic functions	90
2. Compact Riemann regions	104
3. The fundamental group	113
4. Invariance of the genus	124
5. The Poisson integral	129
6. The Dirichlet integral	138
7. Preliminaries for the mapping theorem	147
8. Construction of a harmonic function with minimal property	154
9. The mapping theorem	168
10. Uniformization of algebraic functions	178
