

**TOPICS IN
ERGODIC THEORY**

Ya. G. Sinai

PRINCETON UNIVERSITY PRESS
PRINCETON, NEW JERSEY
1994

CONTENTS

Preface	vii
I. General Ergodic Theory	
Lecture 1. Measurable Transformations. Invariant Measures. Ergodic Theorems	3
Lecture 2. Lebesgue Spaces and Measurable Partitions. Ergodicity and Decomposition into Ergodic Components. Spectrum of Interval Exchange Transformations	16
Lecture 3. Isomorphism of Dynamical Systems. Generators of Dynamical Systems	28
Lecture 4. Dynamical Systems with Pure Point Spectra	36
Lecture 5. General Properties of Eigenfunctions and Eigenvalues of Ergodic Automorphisms. Isomorphism of Dynamical Systems with Pure Point Spectrum	43
II. Entropy Theory of Dynamical Systems	
Lecture 6. Entropy Theory of Dynamical Systems	55
Lecture 7. Breiman Theorem. Pinsker Partition. K-Systems. Exact Endomorphisms. Gibbs Measures	69
Lecture 8. Entropy of Dynamical Systems with Multidimensional Time. Systems of Cellular Automata as Dynamical Systems	77
III. One-Dimensional Dynamics	
Lecture 9. Continued Fractions and Farey Fractions	87
Lecture 10. Homeomorphisms and Diffeomorphisms of the Circle	95

Lecture 11. Sharkovskii's Ordering and Feigenbaum's Universality	111
Lecture 12. Expanding Mappings of the Circle	123
IV. Two-Dimensional Dynamics	
Lecture 13. Standard Map, Twist Maps, Periodic Orbits, Aubry-Mather Theory	137
Lecture 14. Periodic Hyperbolic Points, Their Stable and Unstable Manifolds, Homoclinic and Heteroclinic Orbits	147
Lecture 15. Homoclinic and Heteroclinic Points and Stochastic Layers	167
V. Elements of the Theory of Hyperbolic Dynamical Systems	
Lecture 16. Geodesic Flows and Their Generalizations, Discontinuous Dynamical Systems, Stable and Unstable Manifolds	177
Lecture 17. Existence of Local Manifolds, Gibbs Measures	194
Lecture 18. Markov Partitions, \mathcal{H} -Theorem for Dynamical Systems, Elements of Thermodynamic Formalism	204
Index	217
