CONTENTS

INTRODUCTION : NOTE ON TERMINOLOGY AND NOTATIONS	1
CHAPTER I. ANALYTIC GEOMETRY OF CIRCLES	5
§ 1. Representation of Circles by Hermitian Matrices	5
a. One circle	5
b. Two circles	7
c. Pencils of circles	8
Examples	10
§ 2. The Inversion	12
a. Definition	12
b. Simple properties of the inversion	15
Examples	17
§ 3. Stereographic Projection	22
a. Definition	22
b. Simple properties of the stereographic projection	24
c. Stereographic projection and polarity	26
Examples	27
§ 4. Pencils and Bundles of Circles	29
a. Pencils of circles	29
b. Bundles of circles	31
Examples	32
§ 5. The Cross Ratio	33
a. The simple ratio	33
b. The double ratio or cross ratio	34
c. The cross ratio in circle geometry	36
Examples	39
CHAPTER II. THE MOEBIUS TRANSFORMATION	41
§ 6. Definition: Elementary Properties	41
a. Definition and notation	41
b. The group of all Moebius transformations	42
c. Simple types of Moebius transformations	43
d. Mapping properties of the Moebius transformation	46
e. Transformation of a circle	48
f. Involutions	49
Examples	50

§ 7.	Real One-dimensional Projectivities	52
a.	Perspectivities	52
b.	Projectivities	54
c.	Line-circle perspectivity	56
	Examples	58
§ 8.	Similarity and Classification of Moebius Transformations	60
a.	Introduction of a new variable	60
b.	Normal forms of Moebius transformations	62
c.	Hyperbolic, elliptic, loxodromic transformations	64
d.	The subgroup of the real Moebius transformations	67
e.	The characteristic parallelogram	69
	Examples	72
§ 9.	Classification of Anti-homographies	78
a.	Anti-homographies	78
b.	Anti-involutions	79
c.	Normal forms of non-involutory anti-homographies	80
d.	Normal forms of circle matrices and anti-involutions	83
e.	Moebius transformations and anti-homographies as products of inversions	83
f.	The groups of a pencil	85
	Examples	86
§ 10.	Iteration of a Moebius Transformation	89
a.	General remarks on iteration	89
b.	Iteration of a Moebius transformation	91
c.	Periodic sequences of Moebius transformations	91
d.	Moebius transformations with periodic iteration	92
e.	Continuous iteration	94
f.	Continuous iteration of a Moebius transformation	95
	Examples	99
§ 11.	Geometrical Characterization of the Moebius Transformation	106
a.	The fundamental theorem	106
b.	Complex projective transformations	109
c.	Representation in space	113
	Examples	116

CHAPTER III. TWO-DIMENSIONAL NON-EUCLIDEAN GEOMETRIES 120

§ 12. Subgroups of Möbius Transformations	120
a. The group $\mathcal{U}$ of the unit circle	120
b. The group $\mathcal{R}$ of rotational Möbius transformations	122
c. Normal forms of bundles of circles	125
d. The bundle groups	126
e. Transitivity of the bundle groups	128
Examples	129
§ 13. The Geometry of a Transformation Group	136
a. Euclidean geometry	136
b. $\mathcal{G}$ -geometry	138
c. Distance function	139
d. $\mathcal{G}$ -circles	141
Examples	142
§ 14. Hyperbolic Geometry	144
a. Hyperbolic straight lines and distance	145
b. The triangle inequality	146
c. Hyperbolic circles and cycles	148
d. Hyperbolic trigonometry	149
e. Applications	154
Examples	156
§ 15. Spherical and Elliptic Geometry	163
a. Spherical straight lines and distance	163
b. Additivity and triangle inequality	164
c. Spherical circles	166
d. Elliptic geometry	168
e. Spherical trigonometry	170
Examples	173

APPENDICES

1. Uniqueness of the cross ratio	179
2. A theorem of H. Haruki	180
3. Applications of the characteristic parallelogram	182
4. <i>Complex Numbers in Geometry</i> by I. M. Yaglom	189
