

Phillip A. Griffiths

Introduction to Algebraic Curves

American Mathematical Society

Contents

Chapter I. Fundamental Concepts	1
§1. Algebraic curves in the complex projective plane P^2C	1
§2. Riemann surfaces	4
§3. Holomorphic and meromorphic functions	12
§4. Holomorphic and meromorphic differentials	15
§5. Differential forms	19
§6. The Poincaré-Hopf formula	22
§7. Complex manifolds	24
§8. Algebraic varieties	31
§9. Smooth points, tangent spaces and the implicit function theorem	36
§10. Holomorphic mappings from compact Riemann surfaces into complex projective spaces	46
Chapter II. The Normalization Theorem and its Applications	53
§1. Singularities of plane algebraic curves	53
§2. The connectedness of irreducible plane algebraic curves	56
§3. The concept of normalization	66
§4. The Weierstrass polynomial	68
§5. The local structure of plane algebraic curves	75
§6. The completion of the proof of the normalization theorem	81
§7. Divisors, intersection numbers and Bezout's theorem	82
§8. Ramification divisors and the Riemann-Hurwitz formula	90
§9. The genus formula	95
Chapter III. The Riemann-Roch Theorem	99
§1. Preliminaries	99
§2. The dimension of $\Omega^1(C)$	102
§3. Two important theorems	109
§4. The Riemann inequality	112
§5. The Riemann-Roch theorem	118

Chapter IV. Applications of the Riemann-Roch Theorem	125
§1. The case of genus 0	125
§2. The case of genus 1	126
§3. Canonical maps	132
§4. Hyperelliptic compact Riemann surfaces	137
§5. The case of genus 2	144
§6. The case of genus 3	145
§7. The case of genus 4	148
Chapter V. Abel's Theorem and Its Applications	153
§1. The Jacobian variety and Abel's theorem	153
§2. Differentials of the third kind	158
§3. The Riemann bilinear relations	168
§4. The Jacobi inversion theorem	177
§5. Applications of Abel's theorem	192
Test Problems I. (Chapters I and II)	207
Test Problems II. (Chapters III, IV, and V)	209
Appendix. On a "General Fact"	213
Annotated Bibliography	217
Index	221
