

**MATHEMATICAL
METHODS OF
OPERATIONS RESEARCH**

BY THOMAS L. SAATY

*University Professor
University of Pittsburgh*

Dover Publications, Inc.
NEW YORK

CONTENTS

<i>Preface to the Dover Edition</i>	iii
<i>Preface to the First Edition</i>	vii
1. Operations Research—History and Concepts	1
Part 1. Scientific Method—Truth; Mathematics and Logic—Validity; Outlines of Some Useful Mathematical Models	
2. Some Remarks on Scientific Method in Operations Research	21
3. Mathematical Existence and Logical Proof	41
4. Elementary Classical Methods Used in Model Formulation	65
Part 2. Optimization, Programming, and Game Theory	
5. Optimization	99
6. Linear and Quadratic Programming	165
7. The Theory of Games	209
Some Optimization Problems	228
Part 3. Probability, Applications, Statistics, and Queuing Theory	
8. Probability	235
9. Some Applications	275
10. Fundamental Statistics	302
11. Résumé of Queuing Theory	331
Some Probability and Statistics Problems	375
Part 4. An Essay	
12. Some Thoughts on Creativity	381
Elementary Analytical Problems and Projects	400
Part 5. Decision Making	
13. Multicriteria Decision Making: The Analytic Hierarchy Process	415
<i>Index</i>	451
<i>Index to Chapter 13</i>	459
