

THEORETICAL ELASTICITY

A. E. GREEN

UNIVERSITY OF NEWCASTLE UPON TYNE

W. ZERNA

RUHR-UNIVERSITÄT, BOCHUM

SECOND EDITION

DOVER PUBLICATIONS, INC.
New York

Contents

1. MATHEMATICAL PRELIMINARIES	1
1.1. Indicial notation. Summation convention. Kronecker delta	1
1.2. Transformations of coordinates	3
1.3. Invariants. Tensors	4
1.4. Addition, multiplication, and contraction of tensors	6
1.5. Symmetric and skew-symmetric tensors	7
1.6. Curvilinear coordinates	8
1.7. Special tensors	9
1.8. Vectors	12
1.9. Line element. Base vectors. Metric tensors	18
1.10. Associated tensors	22
1.11. Canonical form of symmetric tensors	23
1.12. Covariant differentiation	25
1.13. Geometry of a surface	31
1.14. Smooth curves. Hölder condition	40
1.15. Sectionally continuous functions	41
1.16. Sectionally holomorphic functions	42
1.17. Cauchy integrals	43
1.18. Sectionally holomorphic functions with given discontinuities on contours	46
1.19. Functions of classes H and H^*	47
1.20. Sectionally holomorphic functions for given discontinuities on arcs	47
1.21. Hilbert problem for arcs	48
1.22. Fourier integrals	50
2. GENERAL THEORY	53
2.1. Geometrical relations	53
2.2. Stress. Equations of motion	57
2.3. Elasticity	62
2.4. Alternative form for basic equations	65
2.5. Further kinematics	67
2.6. Body and surface forces. Stress	68
2.7. The rate of work equation	68
2.8. Entropy production inequality	72
2.9. Thermo-elasticity	72
2.10. Summary of notations and formulae	76

3. FINITE DEFORMATION: SOLUTION OF SPECIAL PROBLEMS	79
3.1. Uniform extensions	79
3.2. Simple shear	81
3.3. Pure torsion of a right circular cylinder	83
3.4. Simultaneous extension, inflation, and torsion of a cylindrical tube	87
3.5. The deformation of a cylindrical rod	91
3.6. Tube turned inside out	93
3.7. Simultaneous extension, inflation, and shear of a cylindrical tube	94
3.8. Shear of a cylindrical tube	99
3.9. Rotation of a right circular cylinder about its axis	100
3.10. Symmetrical expansion of a thick spherical shell	103
3.11. Flexure of a cuboid	107
3.12. Experiments on rubber	112
4. SMALL DEFORMATIONS SUPERPOSED ON FINITE DEFORMATION	113
4.1. General theory	113
4.2. Small deformation superposed on finite uniform extensions	116
4.3. Small twist of a cylinder superposed on finite extension	121
4.4. Solution in terms of potential functions: compressible case	126
4.5. Solution in terms of potential functions: incompressible case	131
4.6. Indentation problems	135
4.7. Small bending of a stretched plate	137
4.8. Generalized plane stress superposed on finite extension	144
5. INFINITESIMAL THEORY	148
5.1. Strain	148
5.2. Stress. Equations of motion	149
5.3. Stress-strain relations	150
5.4. Elastic coefficients	153
5.5. Differential equations for an isotropic body	159
5.6. Solution for isotropic bodies in terms of potential functions	163
5.7. Problems depending on one harmonic function	167
5.8. Indentation problems	169
5.9. Indentation by flat-ended cylinder	173
5.10. Distribution of stress in neighbourhood of a circular crack	174
5.11. Notation	176
5.12. Potential solutions for transversely isotropic bodies	177
6. THEORY OF PLANE STRAIN	182
6.1. Coordinate system	183
6.2. Airy's stress function	184
6.3. Isotropic bodies	188

6.4. Complex variable	190
6.5. Conformal transformation	195
6.6. Properties of complex potentials for isotropic bodies	198
6.7. Anisotropic bodies	202
6.8. Properties of complex potentials for anisotropic bodies	208
6.9. Orthotropic bodies	211
7. PLATE THEORY	213
7.1. Stress resultants and stress couples	213
7.2. Loads	216
7.3. Equations of equilibrium	217
7.4. Stress-strain relations for isotropic plates	219
7.5. Stretching of isotropic plates: generalized plane stress	220
7.6. Stretching of anisotropic plates: generalized plane stress	221
7.7. Transverse flexure of isotropic plates: Reissner's theory	222
7.8. Notation	227
7.9. Integration in terms of complex potentials	229
7.10. Properties of the complex potentials	232
7.11. Classical bending theory: isotropic plates	237
7.12. Rate of work and elastic potential for flexure	239
7.13. Boundary conditions	241
7.14. Bending of anisotropic plates	245
8. PLANE PROBLEMS FOR ISOTROPIC BODIES	252
8.1. Formulae for plane strain and generalized plane stress	252
8.2. Change of origin	255
8.3. Isolated force and couple in infinite plate	255
8.4. General complex potentials for infinite plate	256
8.5. Isolated force at boundary	256
8.6. Extension of complex potentials for half-plane	259
8.7. First boundary-value problem for half-plane	260
8.8. Isolated force and couple in semi-infinite body	263
8.9. Examples of given applied stresses on boundary of semi-infinite body	264
8.10. Second boundary-value problem for half-plane	266
8.11. Mixed boundary-value problem for half-plane	268
8.12. Punch problems	269
8.13. Indentation by rectangular block	272
8.14. Indentation by circular block	273
8.15. Cracks	274
8.16. Crack of prescribed shape	276
8.17. Cracks opened by given pressure	276
8.18. Circular regions	278
8.19. First boundary-value problem for circular hole	279

8.20. Effect of circular hole on given stress distributions	284
8.21. Prescribed forces at circular hole	285
8.22. Second boundary-value problem for circular hole	286
8.23. Mixed boundary-value problem for circular hole	288
8.24. First boundary-value problem for a circular disk	290
8.25. Curvilinear polygonal hole	294
8.26. First boundary-value problem for polygonal hole	296
8.27. Effect of polygonal hole on given stress distributions	300
8.28. Prescribed forces at polygonal hole	303
8.29. Distribution of stress in infinite wedge	304
8.30. Overlapped circular holes	309
8.31. Notch or mound and straight boundary	315
8.32. Reissner's theory of flexure: circular hole	318
 9. PLANE PROBLEMS FOR ANISOTROPIC BODIES	 322
9.1. Formulae for plane strain and generalized plane stress	322
9.2. Orthotropic plates: numerical calculations	325
9.3. Isolated force in infinite plate	326
9.4. Isolated force at boundary	328
9.5. The half-plane	330
9.6. First boundary-value problem for half-plane: part 1	333
9.7. First boundary-value problem for half-plane: part 2	337
9.8. Second boundary-value problem for half-plane	339
9.9. Punch problems	341
9.10. Cracks	344
9.11. Circular hole in infinite plate	346
9.12. First boundary-value problem for circular hole: part 1	348
9.13. Circular hole: uniform stress at infinity	350
9.14. Circular hole: uniform couple at infinity	351
9.15. Isolated force near circular hole	353
9.16. First boundary-value problem for circular hole: part 2	354
9.17. Examples of applied stress at a circular hole	357
9.18. Second boundary-value problem for circular hole	358
9.19. Elliptical hole in infinite plate	362
9.20. First boundary-value problem for elliptical hole	364
9.21. Hyperbolic notch	368
 10. SHELLS	 373
10.1. Geometrical relations	373
10.2. Stress resultants and stress couples	375
10.3. Loads	377
10.4. Equations of equilibrium	379
10.5. Stress-strain relations	381
10.6. Plane coordinates	382

11. GENERAL THEORY OF MEMBRANE SHELLS	386
11.1. Membrane theory in general curvilinear coordinates	387
11.2. Membrane theory in plane coordinates	389
12. BENDING THEORY OF SHELLS	393
12.1. Approximation	393
12.2. Rate of work and elastic potential	396
12.3. Edge conditions	397
13. THEORY OF SHALLOW SHELLS	400
13.1. Approximations for shallow shells	400
13.2. Stress-strain relations	401
13.3. Differential equations	402
13.4. Geometrical relations for spherical cap	403
13.5. Differential equation for spherical cap	406
13.6. Solution of homogeneous equation for rotational symmetry	407
14. THEORY OF CYLINDRICAL SHELLS	409
14.1. Geometrical relations	410
14.2. Stress resultants, shearing forces, stress couples, and loads	412
14.3. Membrane theory	412
14.4. Differential equations of bending theory	416
14.5. Solution of homogeneous equation for circular cylindrical shells	418
15. SHELLS OF REVOLUTION	421
15.1. Geometrical relations	421
15.2. Equations of equilibrium	424
15.3. Displacements	426
15.4. Special solutions	427
15.5. Edge effect	430
16. ASYMPTOTIC EXPANSIONS	434
16.1. Basic equations	436
16.2. Membrane theory	437
16.3. Inextensional theory	438
16.4. Bending theory	440
16.5. Edge effect	443
16.6. Shell equations	445
16.7. Rate of work and elastic potential	449
16.8. Edge conditions	450
