# Contents

|     |                                        |    |
|-----|----------------------------------------|----|
| 1   | What is Percolation?                   | 1  |
| 1.1 | Modelling a Random Medium              | 1  |
| 1.2 | Why Percolation?                       | 3  |
| 1.3 | Bond Percolation                       | 9  |
| 1.4 | The Critical Phenomenon                | 13 |
| 1.5 | The Main Questions                     | 20 |
| 1.6 | Site Percolation                       | 24 |
| 1.7 | Notes                                  | 29 |
| 2   | Some Basic Techniques                  | 32 |
| 2.1 | Increasing Events                      | 32 |
| 2.2 | The FKG Inequality                     | 34 |
| 2.3 | The BK Inequality                      | 37 |
| 2.4 | Russo's Formula                        | 41 |
| 2.5 | Inequalities of Reliability Theory     | 46 |
| 2.6 | Another Inequality                     | 49 |
| 2.7 | Notes                                  | 51 |
| 3   | Critical Probabilities                 | 53 |
| 3.1 | Equalities and Inequalities            | 53 |
| 3.2 | Strict Inequalities                    | 57 |
| 3.3 | Enhancements                           | 63 |
| 3.4 | Bond and Site Critical Probabilities   | 71 |
| 3.5 | Notes                                  | 75 |
| 4   | The Number of Open Clusters per Vertex | 77 |
| 4.1 | Definition                             | 77 |
| 4.2 | Lattice Animals and Large Deviations   | 79 |
| 4.3 | Differentiability of $\kappa$          | 84 |
| 4.4 | Notes                                  | 86 |

|      |                                                            |     |
|------|------------------------------------------------------------|-----|
| 5    | Exponential Decay                                          | 87  |
| 5.1  | Mean Cluster Size                                          | 87  |
| 5.2  | Exponential Decay of the Radius Distribution beneath $p_c$ | 88  |
| 5.3  | Using Differential Inequalities                            | 102 |
| 5.4  | Notes                                                      | 114 |
| 6    | The Subcritical Phase                                      | 117 |
| 6.1  | The Radius of an Open Cluster                              | 117 |
| 6.2  | Connectivity Functions and Correlation Length              | 126 |
| 6.3  | Exponential Decay of the Cluster Size Distribution         | 132 |
| 6.4  | Analyticity of $\kappa$ and $\chi$                         | 142 |
| 6.5  | Notes                                                      | 144 |
| 7    | Dynamic and Static Renormalization                         | 146 |
| 7.1  | Percolation in Slabs                                       | 146 |
| 7.2  | Percolation of Blocks                                      | 148 |
| 7.3  | Percolation in Half-Spaces                                 | 162 |
| 7.4  | Static Renormalization                                     | 176 |
| 7.5  | Notes                                                      | 196 |
| 8    | The Supercritical Phase                                    | 197 |
| 8.1  | Introduction                                               | 197 |
| 8.2  | Uniqueness of the Infinite Open Cluster                    | 198 |
| 8.3  | Continuity of the Percolation Probability                  | 202 |
| 8.4  | The Radius of a Finite Open Cluster                        | 205 |
| 8.5  | Truncated Connectivity Functions and Correlation Length    | 213 |
| 8.6  | Sub-Exponential Decay of the Cluster Size Distribution     | 215 |
| 8.7  | Differentiability of $\theta$ , $\chi^f$ , and $\kappa$    | 224 |
| 8.8  | Geometry of the Infinite Open Cluster                      | 226 |
| 8.9  | Notes                                                      | 229 |
| 9    | Near the Critical Point: Scaling Theory                    | 232 |
| 9.1  | Power Laws and Critical Exponents                          | 232 |
| 9.2  | Scaling Theory                                             | 239 |
| 9.3  | Renormalization                                            | 244 |
| 9.4  | The Incipient Infinite Cluster                             | 249 |
| 9.5  | Notes                                                      | 252 |
| 10   | Near the Critical Point: Rigorous Results                  | 254 |
| 10.1 | Percolation on a Tree                                      | 254 |
| 10.2 | Inequalities for Critical Exponents                        | 262 |
| 10.3 | Mean Field Theory                                          | 269 |
| 10.4 | Notes                                                      | 278 |

|       |                                                       |     |
|-------|-------------------------------------------------------|-----|
| 11    | Bond Percolation in Two Dimensions                    | 281 |
| 11.1  | Introduction                                          | 281 |
| 11.2  | Planar Duality                                        | 283 |
| 11.3  | The Critical Probability Equals $\frac{1}{2}$         | 287 |
| 11.4  | Tail Estimates in the Supercritical Phase             | 295 |
| 11.5  | Percolation on Subsets of the Square Lattice          | 303 |
| 11.6  | Central Limit Theorems                                | 309 |
| 11.7  | Open Circuits in Annuli                               | 314 |
| 11.8  | Power Law Inequalities                                | 324 |
| 11.9  | Inhomogeneous Square and Triangular Lattices          | 331 |
| 11.10 | Notes                                                 | 345 |
| 12    | Extensions of Percolation                             | 349 |
| 12.1  | Mixed Percolation on a General Lattice                | 349 |
| 12.2  | $AB$ Percolation                                      | 351 |
| 12.3  | Long-Range Percolation in One Dimension               | 351 |
| 12.4  | Surfaces in Three Dimensions                          | 359 |
| 12.5  | Entanglement in Percolation                           | 362 |
| 12.6  | Rigidity in Percolation                               | 364 |
| 12.7  | Invasion Percolation                                  | 366 |
| 12.8  | Oriented Percolation                                  | 367 |
| 12.9  | First-Passage Percolation                             | 369 |
| 12.10 | Continuum Percolation                                 | 371 |
| 13    | Percolative Systems                                   | 378 |
| 13.1  | Capacitated Networks                                  | 378 |
| 13.2  | Random Electrical Networks                            | 380 |
| 13.3  | Stochastic Pin-Ball                                   | 382 |
| 13.4  | Fractal Percolation                                   | 385 |
| 13.5  | Contact Model                                         | 390 |
| 13.6  | Random-Cluster Model                                  | 393 |
|       | Appendix I. The Infinite-Volume Limit for Percolation | 397 |
|       | Appendix II. The Subadditive Inequality               | 399 |
|       | List of Notation                                      | 401 |
|       | References                                            | 404 |
|       | Index of Names                                        | 435 |
|       | Subject Index                                         | 439 |
