The Monge–Ampère Equation

Birkhäuser
Boston • Basel • Berlin

Contents

Preface	ix
Notation	xi
1 Generalized Solutions to Monge–Ampère Equations	1
1.1 The normal mapping	1
1.1.1 Properties of the normal mapping	2
1.2 Generalized solutions	6
1.3 Viscosity solutions	8
1.4 Maximum principles	10
1.4.1 Aleksandrov’s maximum principle	11
1.4.2 Aleksandrov–Bakelman–Pucci’s maximum principle	12
1.4.3 Comparison principle	16
1.5 The Dirichlet problem	17
1.6 The nonhomogeneous Dirichlet problem	19
1.7 Return to viscosity solutions	24
1.8 Ellipsoids of minimum volume	25
1.9 Notes	29
2 Uniformly Elliptic Equations in Nondivergence Form	31
2.1 Critical density estimates	31
2.2 Estimate of the distribution function of solutions	37
2.3 Harnack’s inequality	40
2.4 Notes	43
3 The Cross-sections of Monge–Ampère	45
3.1 Introduction	45
3.2 Preliminary results	47
3.3 Properties of the sections	50
3.3.1 The Monge–Ampère measures satisfying (3.1.1)	50
3.3.2 The engulfing property of the sections	55
3.3.3 The size of normalized sections	57
3.4 Notes	62

4	Convex Solutions of $\det D^2u = 1$ in $\mathbb{R}^n$	63
4.1	Pogorelov's Lemma	63
4.2	Interior Hölder estimates of D^2u	67
4.3	C^α estimates of D^2u	70
4.4	Notes	74
5	Regularity Theory for the Monge–Ampère Equation	75
5.1	Extremal points	75
5.2	A result on extremal points of zeroes of solutions to Monge–Ampère	77
5.3	A strict convexity result	79
5.4	$C^{1,\alpha}$ regularity	84
5.5	Examples	92
5.6	Notes	93
6	$W^{2,p}$ Estimates for the Monge–Ampère Equation	95
6.1	Approximation Theorem	95
6.2	Tangent paraboloids	99
6.3	Density estimates and power decay	101
6.4	L^p estimates of second derivatives	108
6.5	Proof of the Covering Theorem 6.3.3	112
6.6	Regularity of the convex envelope	119
6.7	Notes	121
	Bibliography	123
	Index	127
