

Juan G. Roederer

The Physics and Psychophysics of Music

An Introduction

Third Edition

With 123 Figures

Springer-Verlag

New York Berlin Heidelberg London Paris
Tokyo Hong Kong Barcelona Budapest

Contents

Preface to the Third Edition	vii
1 Music, Physics, Psychophysics, and Neuropsychology: An Interdisciplinary Approach	1
1.1 The Intervening Physical Systems	1
1.2 Characteristic Attributes of Musical Sounds	3
1.3 The Time Element in Music	5
1.4 Physics and Psychophysics	6
1.5 Psychophysics and Neuropsychology	10
1.6 What is Music?	12
2 Sound Vibrations, Pure Tones, and the Perception of Pitch	15
2.1 Motion and Vibration	15
2.2 Simple Harmonic Motion	19
2.3 Acoustical Vibrations and Pure Tone Sensations	21
2.4 Superposition of Pure Tones: First Order Beats and the Critical Band	28
2.5 Other First Order Effects: Combination Tones and Aural Harmonics	36
2.6 Second Order Effects: Beats of Mistuned Consonances	40
2.7 Fundamental Tracking	43
2.8 Auditory Coding in the Peripheral Nervous System	50
2.9 Subjective Pitch and the Role of the Central Nervous System	55
3 Sound Waves, Acoustical Energy, and the Perception of Loudness	67
3.1 Elastic Waves, Force, Energy, and Power	67
3.2 Propagation Speed, Wavelength, and Acoustical Power	71
3.3 Superposition of Waves; Standing Waves	82
3.4 Intensity, Sound Intensity Level, and Loudness	85

3.5	The Loudness Perception Mechanism and Related Processes	97
3.6	Music from the Ears: Otoacoustic Emissions and Cochlear Mechanics	100
4	Generation of Musical Sounds, Complex Tones, and the Perception of Timbre	106
4.1	Standing Waves in a String	106
4.2	Generation of Complex Standing Vibrations in String Instruments	111
4.3	Sound Vibration Spectra and Resonance	120
4.4	Standing Longitudinal Waves in an Idealized Air Column	129
4.5	Generation of Complex Standing Vibrations in Wind Instruments	133
4.6	Sound Spectra of Wind Instrument Tones	139
4.7	Trapping and Absorption of Sound Waves in a Closed Environment	142
4.8	Perception of Pitch and Timbre of Musical Tones	146
4.9	Identification of Musical Sounds	151
4.10	Cognitive Brain Processes Relevant to the Perception of Individual Tones	153
5	Superposition and Successions of Complex Tones and the Perception of Music	162
5.1	Superposition of Complex Tones	162
5.2	The Sensation of Musical Consonance and Dissonance	165
5.3	Building Musical Scales	171
5.4	The Standard Scale and the Standard of Pitch	176
5.5	Why Are There Musical Scales?	179
5.6	Cognitive and Affective Brain Processes in Music Perception: Why Do We Respond Emotionally to Music?	181
5.7	Specialization of Speech and Music Processing in the Cerebral Hemispheres	185
	Appendix I: Some Quantitative Aspects of the Bowing Mechanism	191
	Appendix II: Some Quantitative Aspects of Central Pitch Processor Models	195
	Appendix III: Some Remarks on Teaching Physics and Psychophysics of Music	205
	References	208
	Index	215
