Contents

American Options, Multi-armed Bandits, and Optimal Consumption Plans: A Unifying View

<i>Peter Bank, Hans Föllmer</i>	1
1 Introduction	1
2 Reducing Optimization Problems to a Representation Problem	4
2.1 American Options	4
2.2 Optimal Consumption Plans	18
2.3 Multi-armed Bandits and Gittins Indices	23
3 A Stochastic Representation Theorem	24
3.1 The Result and its Application	24
3.2 Proof of Existence and Uniqueness	28
4 Explicit Solutions	31
4.1 Lévy Models	31
4.2 Diffusion Models	34
5 Algorithmic Aspects	36
References	40

Modeling Anticipations on Financial Markets

<i>Fabrice Baudoin</i>	43
1 Mathematical Framework	43
2 Strong Information Modeling	47
2.1 Some Results on Initial Enlargement of Filtration	47
2.2 Examples of Initial Enlargement of Filtration	51
2.3 Utility Maximization with Strong Information	57
2.4 Comments	60
3 Weak Information Modeling	61
3.1 Conditioning of a Functional	61
3.2 Examples of Conditioning	67
3.3 Pathwise Conditioning	71
3.4 Comments	73
4 Utility Maximization with Weak Information	74
4.1 Portfolio Optimization Problem	74
4.2 Study of a Minimal Markov Market	80
5 Modeling of a Weak Information Flow	83
5.1 Dynamic Conditioning	83
5.2 Dynamic Correction of a Weak Information	86
5.3 Dynamic Information Arrival	91
6 Comments	92
References	92

Duality in constrained optimal investment and consumption problems: a synthesis

<i>L.C.G. Rogers</i>	95
1 Dual Problems Made Easy	95
2 Dual Problems Made Concrete	99
3 Dual Problems Made Difficult	103
4 Dual Problems Made Honest	111
5 Dual Problems Made Useful	118
6 Taking Stock	121
7 Solutions to Exercises	125
References	130

The Problem of Super-replication under Constraints

<i>H. Mete Soner, Nizar Touzi</i>	133
1 Introduction	133
2 Problem Formulation	134
2.1 The Financial Market	134
2.2 Portfolio and Wealth Process	135
2.3 Problem Formulation	136
3 Existence of Optimal Hedging Strategies and Dual Formulation	137
3.1 Complete Market: the Unconstrained Black-Scholes World	138
3.2 Optional Decomposition Theorem	140
3.3 Dual Formulation	143
3.4 Extensions	144
4 HJB Equation from the Dual Problem	146
4.1 Dynamic Programming Equation	146
4.2 Supersolution Property	149
4.3 Subsolution Property	151
4.4 Terminal Condition	153
5 Applications	156
5.1 The Black-Scholes Model with Portfolio Constraints	156
5.2 The Uncertain Volatility Model	157
6 HJB Equation from the Primal Problem for the General Large Investor Problem	157
6.1 Dynamic Programming Principle	158
6.2 Supersolution Property from DP1	159
6.3 Subsolution Property from DP2	161
7 Hedging under Gamma Constraints	163
7.1 Problem Formulation	163
7.2 The Main Result	164
7.3 Discussion	165
7.4 Proof of Theorem 5	166
References	171
