I	GENERAL CONSIDERATIONS	1
1	INTRODUCTION	3
1.1	Notation for stress and displacement	4
1.1.1	Stress	4
1.1.2	Index and vector notation	6
1.1.3	Vectors, tensors and transformation rules	7
1.1.4	Displacement	10
1.2	Strains and their relation to displacements	11
1.2.1	Tensile strain	11
1.2.2	Rotation and shear strain	13
1.2.3	Transformation of coördinates	14
1.2.4	Definition of shear strain	16
1.3	Stress-strain relations	17
1.3.1	Lamé's constants	18
1.3.2	Dilatation and bulk modulus	19
	PROBLEM	19
2	EQUILIBRIUM AND COMPATIBILITY	21
2.1	Equilibrium equations	21
2.2	Compatibility equations	22
2.2.1	The significance of the compatibility equations	24
2.3	Equilibrium equations for displacements	27
	PROBLEMS	28

II	TWO-DIMENSIONAL PROBLEMS	29
3	PLANE STRAIN AND PLANE STRESS	31
3.1	Plane strain	31
3.1.1	The corrective solution	33
3.1.2	Saint-Venant's principle	34
3.2	Plane stress	34
3.2.1	Generalized plane stress	36
3.2.2	Relationship between plane stress and plane strain	36
	PROBLEMS	37
4	STRESS FUNCTION FORMULATION	39
4.1	The concept of a scalar stress function	39
4.2	Choice of a suitable form	40
4.3	The Airy stress function	40
4.4	The governing equation	41
4.4.1	The equilibrium equations	41
4.4.2	Non-zero body forces	41
4.4.3	The compatibility condition	42
4.4.4	Method of solution	42
4.4.5	Reduced dependence on elastic constants	43
	PROBLEM	43
5	PROBLEMS IN RECTANGULAR COÖRDINATES	45
5.1	Biharmonic polynomial functions	45
5.1.1	Second and third degree polynomials	47
5.2	Rectangular beam problems	49
5.2.1	Bending of a beam by an end load	49
5.2.2	Higher order polynomials — symmetry considerations	51
5.3	Series and transform solutions	54
	PROBLEMS	56
6	END EFFECTS	59
6.1	Decaying solutions	59
6.2	The corrective solution	60
6.2.1	Separated variable solutions	61
6.2.2	The eigenvalue problem	62
6.3	Other Saint-Venant problems	64
7	BODY FORCES	67
7.1	Stress function formulation	67
7.1.1	Conservative vector fields	68
7.1.2	The compatibility condition	69

7.2	Particular cases	69
7.2.1	Gravitational loading	70
7.2.2	Inertia forces	70
7.2.3	Quasi-static problems	70
7.2.4	Rigid-body kinematics	71
7.3	Solution for the stress function	72
7.3.1	The rotating rectangular beam	73
7.3.2	Solution of the governing equation	75
7.4	Rotational acceleration	76
7.4.1	The circular disk	76
7.4.2	The rectangular bar	78
	PROBLEMS	80
8	PROBLEMS IN POLAR COÖRDINATES	83
8.1	Expressions for stress components	83
8.2	Strain components	84
8.3	Fourier series expansion	85
8.3.1	Satisfaction of boundary conditions	86
8.3.2	Circular hole in a shear field	87
8.3.3	Degenerate cases	90
8.4	The Michell solution	92
8.4.1	Hole in a tensile field	92
	PROBLEMS	95
9	CALCULATION OF DISPLACEMENTS	97
9.1	The cantilever with an end load	97
9.1.1	Rigid-body displacements and end conditions	99
9.1.2	Deflection of the free end	100
9.2	The circular hole	101
9.3	Displacements for the Michell solution	103
9.3.1	Equilibrium considerations	103
	PROBLEMS	105
10	CURVED BEAM PROBLEMS	107
10.1	Loading at the ends	107
10.1.1	Pure bending	107
10.1.2	Force transmission	109
10.2	Eigenvalues and eigenfunctions	112
10.3	The inhomogeneous problem	112
10.3.1	Beam with sinusoidal loading	112
10.3.2	The near-singular problem	115
10.4	Some general considerations	118
10.4.1	Conclusions	119

PROBLEM	119
11 WEDGE PROBLEMS	121
11.1 Power law tractions	121
11.1.1 Uniform tractions	121
11.1.2 More general uniform loading	124
11.1.3 Eigenvalues for the wedge angle	125
11.2 Williams' asymptotic method	125
11.2.1 Acceptable singularities	126
11.2.2 Eigenfunction expansion	128
11.2.3 Nature of the eigenvalues	130
11.2.4 Other geometries	132
11.3 General loading of the faces	135
PROBLEMS	136
12 PLANE CONTACT PROBLEMS	139
12.1 Self-similarity	139
12.2 The Flamant Solution	140
12.3 The half-plane	141
12.3.1 The normal force F_y	142
12.3.2 The tangential force F_x	143
12.3.3 Summary	143
12.4 Distributed normal tractions	144
12.5 Frictionless contact problems	145
12.5.1 Method of solution	146
12.5.2 The flat punch	147
12.5.3 The cylindrical punch (Hertz problem)	148
12.6 Problems with two deformable bodies	151
12.7 Uncoupled problems	154
12.7.1 Contact of cylinders	155
12.8 Combined normal and tangential loading	155
12.8.1 Mindlin's problem	156
12.8.2 Steady rolling: Carter's solution	159
PROBLEMS	162
13 FORCES, DISLOCATIONS AND CRACKS	165
13.1 The Kelvin solution	165
13.1.1 Body force problems	167
13.2 Dislocations	168
13.2.1 Dislocations in Materials Science	169
13.2.2 Similarities and differences	170
13.2.3 Dislocations as Green's functions	171
13.2.4 Stress concentrations	172

13.3 Crack problems	173
13.3.1 Linear Elastic Fracture Mechanics	173
13.3.2 Plane crack in a tensile field	174
PROBLEMS	177
14 THERMOELASTICITY	179
14.1 The governing equation	179
14.1.1 Example	180
14.1.2 The method of strain suppression	181
14.2 Heat conduction	181
14.3 Steady-state problems	182
14.3.1 Dundurs' Theorem	183
PROBLEMS	185
III THREE DIMENSIONAL PROBLEMS	187
15 DISPLACEMENT FUNCTION SOLUTIONS	189
15.1 The strain potential	189
15.2 The Galerkin vector	190
15.3 The Papkovitch-Neuber solution	192
15.4 Completeness and uniqueness	193
15.4.1 Methods of partial integration	194
PROBLEM	197
16 THE BOUSSINESQ POTENTIALS	199
16.1 Solution A : The strain potential	200
16.2 Solution B	200
16.3 Solution E : Rotational deformation	201
16.4 Solutions obtained by superposition	202
16.4.1 Solution F : Frictionless isothermal contact problems	204
16.4.2 Solution G: The surface free of normal traction	204
16.5 The plane strain solution in complex variables	206
16.5.1 Preliminary mathematical results	206
16.5.2 Representation of vectors	206
16.5.3 Representation of displacement	207
16.5.4 Expressions for stresses	208
PROBLEMS	209
17 THERMOELASTIC DISPLACEMENT POTENTIALS	211
17.1 Plane problems	212
17.1.1 Axisymmetric problems for the cylinder	213
17.2 Solution T : Steady-state temperature	214

17.2.1 Thermoelastic plane stress	214
PROBLEM	216
18 SINGULAR SOLUTIONS	217
18.1 The source solution	217
18.1.1 The centre of dilatation	218
18.1.2 The Kelvin solution	219
18.2 Dimensional considerations	220
18.2.1 The Boussinesq solution	221
18.3 Other singular solutions	224
PROBLEMS	225
19 SPHERICAL HARMONICS	227
19.1 Fourier series solution	227
19.2 Reduction to Legendre's equation	228
19.3 Legendre functions	229
19.3.1 Legendre polynomials	229
19.3.2 Singular spherical harmonics	230
19.4 Axisymmetric potentials	230
19.5 Non-axisymmetric harmonics	233
20 AXISYMMETRIC PROBLEMS	235
20.1 The solid cylinder	235
20.2 The spherical hole	237
PROBLEMS	239
21 FRICTIONLESS CONTACT	241
21.1 Boundary conditions	241
21.1.1 Mixed boundary-value problems	242
21.2 Determining the contact area	243
PROBLEM	246
22 THE BOUNDARY-VALUE PROBLEM	249
22.1 Hankel transform methods	249
22.2 Collins' Method	250
22.2.1 Indentation by a flat punch	250
22.2.2 Integral representation	252
22.2.3 Basic forms and surface values	253
22.2.4 Reduction to an Abel equation	254
22.2.5 Example – The Hertz problem	258
22.3 Choice of form	258
PROBLEMS	259

23 THE PENNY-SHAPED CRACK	261
23.1 The penny-shaped crack in tension	261
23.2 Thermoelastic problems	263
PROBLEMS	267
24 THE INTERFACE CRACK	269
24.1 The uncracked interface	269
24.2 The corrective solution	271
24.2.1 Global conditions	272
24.2.2 Mixed conditions	272
24.3 The penny-shaped crack in tension	274
24.3.1 Reduction to a single equation	276
24.3.2 Oscillatory singularities	277
24.4 The contact solution	278
24.5 Implications for Fracture Mechanics	279
25 THE RECIPROCAL THEOREM	281
25.1 Maxwell's Theorem	281
25.2 Betti's Theorem	282
25.3 Use of the theorem	283
25.3.1 A tilted punch problem	284
25.3.2 Indentation of a half-space	287
PROBLEMS	288
Index	290
