

SECOND EDITION

SUBATOMIC PHYSICS

HANS FRAUENFELDER

University of Illinois

ERNEST M. HENLEY

University of Washington

Prentice Hall
Upper Saddle River, New Jersey

Contents

Preface to the First Edition xv

Preface to the Second Edition xxi

1. Background and Language 1

1.1 Orders of Magnitude 1

1.2 Units 2

1.3 The Language—Feynman Diagrams 4

1.4 References 7

Problems 8

PART I Tools 9

2. Accelerators 10

2.1 Why Accelerators? 10

2.2 Electrostatic Generators (Van de Graaff) 13

2.3 Linear Accelerators (Linacs) 15

2.4 Beam Optics 17

2.5 Synchrotrons 20

2.6 Laboratory and Center-of-Momentum Frames 25

2.7 Colliding Beams 27

2.8 The Future 30

2.9 References 33

Problems 34

3. Passage of Radiation Through Matter 37

3.1 Concepts 38

3.2 Heavy Charged Particles 39

3.3	Photons	42
3.4	Electrons	43
3.5	Nuclear Interactions	46
3.6	References	47
	Problems	47

4. Detectors 49

4.1	Scintillation Counters	49
4.2	Statistical Considerations	52
4.3	Semiconductor Detectors	55
4.4	Bubble Chambers	58
4.5	Spark Chambers	59
4.6	Wire Chambers	61
4.7	Time Projection Chambers	62
4.8	Counter Electronics	64
4.9	Electronics Logic	66
4.10	References	67
	Problems	68

PART II Particles and Nuclei 69

5. The Subatomic Zoo 71

5.1	Mass and Spin. Fermions and Bosons	71
5.2	Electric Charge and Magnetic Dipole Moment	76
5.3	Mass Measurements	79
5.4	A First Glance at the Subatomic Zoo	83
5.5	Gauge Bosons	84
5.6	Leptons	87
5.7	Decays	88
5.8	Mesons	92
5.9	Baryon Ground States	95
5.10	Quarks, Gluons, and Intermediate Bosons	98
5.11	Excited States and Resonances	101
5.12	Excited States of Baryons	105
5.13	References	111
	Problems	112

6. Structure of Subatomic Particles 116

6.1	The Approach: Elastic Scattering	117
6.2	Cross Sections and Luminosity	117

6.3	Rutherford and Mott Scattering	120
6.4	Form Factors	123
6.5	The Charge Distribution of Spherical Nuclei	127
6.6	Leptons Are Point Particles	131
6.7	Nucleon Elastic Form Factors	136
6.8	The Charge Radii of the Pion and Kaon	143
6.9	Inelastic Electron Scattering	144
6.10	Deep Inelastic Electron Scattering	147
6.11	Quark-Parton Model for Deep Inelastic Scattering	150
6.12	Scattering and Structure	154
6.13	References	168
	Problems	170

PART III Symmetries and Conservation Laws 173

7. Additive Conservation Laws 175

7.1	Conserved Quantities and Symmetries	175
7.2	The Electric Charge	180
7.3	The Baryon Number	184
7.4	Lepton and Muon Number	186
7.5	Particles and Antiparticles	189
7.6	Hypercharge and Strangeness	194
7.7	Additive Quantum Numbers of Quarks	197
7.8	References	199
	Problems	200

8. Angular Momentum and Isospin 202

8.1	Invariance Under Spatial Rotation	202
8.2	Symmetry Breaking by a Magnetic Field	205
8.3	Charge Independence of Hadronic Forces	205
8.4	The Nucleon Isospin	206
8.5	Isospin Invariance	207
8.6	Isospin of Particles	210
8.7	Isospin in Nuclei	213
8.8	References	217
	Problems	218

9. P , C , and T 220

9.1	The Parity Operation	220
9.2	The Intrinsic Parities of Subatomic Particles	224

9.3	Conservation and Breakdown of Parity	227
9.4	Charge Conjugation	233
9.5	Time Reversal	237
9.6	The Two-State Problem	239
9.7	The Neutral Kaons	242
9.8	The Fall of CP Invariance	248
9.9	References	251
	Problems	252

PART IV Interactions 255

10. The Electromagnetic Interaction 257

10.1	The Golden Rule	257
10.2	Phase Space	262
10.3	The Classical Electromagnetic Interaction	265
10.4	Photon Emission	268
10.5	Multipole Radiation	275
10.6	Electromagnetic Scattering of Leptons	279
10.7	Electron-Positron Colliding Beams	282
10.8	Validity of QED at High Momentum Transfer	284
10.9	The Photon-Hadron Interaction: Vector Mesons	287
10.10	Electron-Positron Collisions and Quarks	292
10.11	The Photon-Hadron Interaction: Real and Spacelike Photons	296
10.12	Summary and Open Problems	304
10.13	References	306
	Problems	307

11. The Weak Interaction 310

11.1	The Continuous Beta Spectrum	310
11.2	Beta Decay Lifetimes	315
11.3	The Current-Current Interaction	316
11.4	A Survey of Weak Processes	321
11.5	The Muon Decay	325
11.6	The Weak Current of Leptons	328
11.7	The Weak Coupling Constant G	332
11.8	Nonstrange and Strange Weak Currents	334
11.9	Weak Currents in Nuclear Physics	336
11.10	Massive Neutrinos	341
11.11	The Weak Current of Hadrons at High Energies	344
11.12	References	355
	Problems	357

12. Introduction to Gauge Theories 360

- 12.1 Introduction 360
- 12.2 Potentials in Quantum Mechanics—the Aharonov–Bohm Effect 363
- 12.3 Gauge Invariance for Non-Abelian Fields 365
- 12.4 Massive Gauge Bosons 370
- 12.5 References 376
- Problems 377

13. The Electroweak Theory 378

- 13.1 Introduction 378
- 13.2 The Gauge Bosons and Weak Isospin 379
- 13.3 The Electroweak Interaction 383
- 13.4 Tests of the Standard Model 389
- 13.5 References 393
- Problems 394

14. Hadronic Interactions 395

- 14.1 Range and Strength of the Low-Energy Hadronic Interactions 397
- 14.2 The Pion–Nucleon Interaction—Survey 400
- 14.3 The Form of the Pion–Nucleon Interaction 404
- 14.4 The Yukawa Theory of Nuclear Forces 406
- 14.5 Properties of the Nucleon–Nucleon Force 408
- 14.6 Meson Theory of the Nucleon–Nucleon Force 416
- 14.7 Hadronic Processes at High Energies 418
- 14.8 The Color Force, Quantum Chromodynamics 425
- 14.9 References 431
- Problems 433

PART V Models 437

15. Quarks, Mesons, and Baryons 439

- 15.1 Introduction 439
- 15.2 Quarks as Building Blocks of Hadrons 440
- 15.3 Hunting the Quark 442
- 15.4 Mesons as Bound Quark States 443
- 15.5 Baryons as Bound Quark States 446
- 15.6 The Hadron Masses 449

15.7	QCD and Quark Models of the Hadrons	451
15.8	Charminium, Upsilon; Heavy Mesons	460
15.9	Outlook and Problems	462
15.10	References	464
	Problems	465
16.	Liquid Drop Model, Fermi Gas Model, Heavy Ions	468
16.1	The Liquid Drop Model	469
16.2	The Fermi Gas Model	473
16.3	Heavy Ion Reactions	476
16.4	References	481
	Problems	483
17.	The Shell Model	485
17.1	The Magic Numbers	486
17.2	The Closed Shells	490
17.3	The Spin-Orbit Interaction	495
17.4	The Single-Particle Shell Model	497
17.5	Generalization of the Single-Particle Model	499
17.6	Isobaric Analog Resonances	501
17.7	References	507
	Problems	508
18.	Collective Model	510
18.1	Nuclear Deformations	511
18.2	Rotational Spectra of Spinless Nuclei	515
18.3	Rotational Families	519
18.4	One-Particle Motion in Deformed Nuclei (Nilsson Model)	522
18.5	Vibrational States in Spherical Nuclei	527
18.6	The Interacting Boson Model	531
18.7	Highly Excited States; Giant Resonances	533
18.8	Nuclear Models—Concluding Remarks	536
18.9	References	539
	Problems	541
19.	Nuclear Astrophysics	545
19.1	Cosmic Rays	546
19.2	Stellar Energy	552

19.3	Neutrino Astronomy	554
19.4	Nucleosynthesis	558
19.5	Stellar Collapse and Neutron Stars	562
19.6	The Beginning of the Universe	567
19.7	Concluding Remarks	569
19.8	References	571
	Problems	573

Appendices 575

A1	The Most Frequently Used Constants	576
A2	A More Complete Collection of Constants	577
A3	Properties of Particles Stable Under Strong Decays	579
A4	A Partial List of Mesons	586
A5	A Selected List of Baryons	589
A6	Periodic Table of the Elements	592
A7	Cumulated Index to A-Chains	593
A8	Spherical Harmonics	594

Index 595
