

An Introduction to
**THE THEORY OF
AEROELASTICITY**

Y. C. FUNG

University of California, San Diego

DOVER PUBLICATIONS, INC.
NEW YORK

CONTENTS

Introduction	1
1. Preliminaries	4
2. Some Aeroelastic Problems in Civil and Mechanical Engineering	60
3. Divergence of a Lifting Surface	81
4. Steady-State Aeroelastic Problems in General	113
5. Flutter Phenomenon	160
6. Fundamentals of Flutter Analysis	186
7. Engineering Flutter Analysis and Structural Design	246
8. Transient Loads, Gusts	272
9. Buffeting and Stall Flutter	310
10. Applications of Laplace Transformation	333
11. General Formulation of Aeroelastic Problems	365
12. Fundamentals of Nonstationary Airfoil Theory	381
13. Oscillating Airfoils in Two-Dimensional Incompressible Flow	395
14. Oscillating Airfoils in Two-Dimensional Compressible Flow	418
15. Unsteady Motions in General. Experiments.	444
Appendixes	471
Author Index	483
Subject Index	491
