

ELEMENTARY MECHANICS OF FLUIDS

BY
HUNTER ROUSE

*Garver Professor Emeritus
Institute of Hydraulic Research
The University of Iowa
Iowa City*

DOVER PUBLICATIONS, INC.
NEW YORK

CONTENTS

CHAPTER	PAGE
I. INTRODUCTION TO THE STUDY OF FLUID MOTION	
1. Mechanics of Fluids as an Engineering Science	1
2. Fundamental Characteristics of Flow	2
3. Fluid Properties as a Guide to Study	4
II. FLUID VELOCITY AND ACCELERATION	
4. Velocity and the Stream Line	8
5. Equations of Continuity	12
6. Significance of the Flow Net	19
7. Acceleration in Steady, Non-Uniform Flow	29
8. Acceleration in Unsteady Flow	35
III. PRESSURE VARIATION IN ACCELERATED FLOW	
9. Principle of Mass Acceleration	43
10. Acceleration due to Pressure Gradient	45
11. Pressure Distribution in Steady, Irrotational Flow	49
12. Application of the Pressure Equation to Problems of Efflux	55
13. Significance of the Euler Number	61
IV. EFFECTS OF GRAVITY ON FLUID MOTION	
14. Mass and Weight	64
15. Acceleration due to Pressure Gradient and Fluid Weight	65
16. Principles of Hydrostatics	70
17. Derivation and Significance of the Bernoulli Theorem	80
18. Curvilinear Flow with a Free Surface	87
19. Geometry of Liquid Jets	98
20. Significance of the Froude Number	102
V. ONE-DIMENSIONAL METHOD OF FLOW ANALYSIS	
21. Principles of Momentum and Energy	109
22. Steady Flow of Liquids in Closed Conduits	120
23. Unsteady Flow of Liquids in Closed Conduits	125
24. Steady Flow in Open Channels	132
25. Open-Channel Waves and Surges	141
VI. EFFECTS OF VISCOSITY ON FLUID MOTION	
26. Viscous Resistance to Fluid Deformation	150
27. Pressure Gradient in Steady, Uniform, Viscous Flow	154
28. Dissipation of Energy through Viscous Shear	160
29. Significance of the Reynolds Number	165
30. Instability of Viscous Flow	170
31. Characteristics of Fluid Turbulence	176

CHAPTER	PAGE
VII. SURFACE RESISTANCE	
32. Theory of the Boundary Layer	183
33. Velocity Distribution near Smooth and Rough Boundaries	191
34. Resistance of Smooth and Artificially Roughened Pipe	201
35. Resistance of Commercial Pipe	209
36. Uniform Conduits of Non-Circular Cross Section	214
37. Gradually Varied Flow in Open Channels	221
VIII. FORM RESISTANCE	
38. Boundary-Layer Separation	232
39. Distribution of Fluid Pressure on Immersed Bodies	235
40. Drag of Immersed Bodies	243
41. Distribution of Piezometric Head at Conduit Transitions	251
42. Loss of Head at Conduit Transitions	263
IX. LIFT AND PROPULSION	
43. Circulation and the Magnus Effect	271
44. Lift and Drag of the Airfoil	278
45. Characteristics of Propellers	288
46. Axial-Flow and Radial-Flow Machinery	298
47. Fluid Transmission of Power	307
X. SURFACE TENSION	
48. Molecular Attraction and Surface Energy	313
49. Surface "Tension" and Capillarity	317
50. Significance of the Weber Number	321
XI. THE ROLE OF COMPRESSIBILITY IN FLUID MOTION	
51. Propagation of Elastic Waves	328
52. Effects of Compressibility on the Steady Flow of Gases	336
53. Significance of the Mach Number	342
APPENDIX. MECHANICAL PROPERTIES OF FLUID MATTER	
54. Application of Dimensional Principles	351
55. Properties of Common Fluids	357
INDEX	367
