

THE PHILOSOPHY OF  
**SPACE & TIME**  
HANS REICHENBACH

Translated by Maria Reichenbach and John Freund,  
with introductory remarks by Rudolf Carnap

# TABLE OF CONTENTS

Preface	Page
	iii
Introduction . . . . .	xi

## Chapter I

### *Space*

§ 1. The axiom of the parallels and non-Euclidean geometry .	1
§ 2. Riemannian geometry . . . . .	7
§ 3. The problem of physical geometry . . . . .	10
§ 4. Coordinative definitions . . . . .	14
§ 5. Rigid bodies . . . . .	19
§ 6. The distinction between universal and differential forces .	24
§ 7. Technical impossibility and logical impossibility . .	28
§ 8. The relativity of geometry . . . . .	30
§ 9. The visualization of Euclidean geometry . . . . .	37
§ 10. The limits of visualization . . . . .	44
§ 11. Visualization of non-Euclidean geometry . . . . .	48
§ 12. Spaces with non-Euclidean topological properties . .	58
§ 13. Pure visualization . . . . .	81
§ 14. Geometry as a theory of relations . . . . .	92
§ 15. What is a graphical representation? . . . . .	101

## Chapter II

### *Time*

§ 16. The difference between space and time . . . . .	109
§ 17. The uniformity of time . . . . .	113
§ 18. Clocks used in practice . . . . .	119
§ 19. Simultaneity . . . . .	123
§ 20. Attempts to determine absolute simultaneity . . . . .	129

## Table of Contents

§ 21.	Time order . . . . .	135
§ 22.	The comparison of time . . . . .	143
§ 23.	Unreal sequences . . . . .	147
Chapter III		
<i>Space and Time</i>		
A. The Space-Time Manifold without Gravitational Fields		
§ 24.	The problem of a combined theory of space and time . . . . .	151
§ 25.	The dependence of spatial measurement on the definition of simultaneity . . . . .	153
§ 26.	Consequences for a centro-symmetrical process of propagation . . . . .	161
§ 27.	The construction of the space-time metric . . . . .	165
§ 28.	The indefinite space-type . . . . .	177
§ 29.	The four-dimensional representation of the space-time geometry . . . . .	182
§ 30.	The retardation of clocks . . . . .	190
§ 31.	The Lorentz contraction and the Einstein contraction . . . . .	195
§ 32.	The principle of the constancy of the velocity of light . . . . .	202
§ 33.	The addition theorem of velocities . . . . .	206
B. Gravitation Filled Space-Time Manifolds		
§ 34.	The relativity of motion . . . . .	210
§ 35.	Motion as a problem of a coordinative definition . . . . .	218
§ 36.	The principle of equivalence . . . . .	222
§ 37.	Einstein's concept of gravitation . . . . .	232
§ 38.	The problem of rotation according to Einstein . . . . .	237
§ 39.	The analytic treatment of Riemannian spaces . . . . .	241
§ 40.	Gravitation and geometry . . . . .	249
§ 41.	Space and time in special gravitational fields . . . . .	258
§ 42.	Space and time in general gravitational fields . . . . .	263
C. The Most General Properties of Space and Time		
§ 43.	The singular nature of time . . . . .	269
§ 44.	The number of dimensions of space . . . . .	273
§ 45.	The reality of space and time . . . . .	283
Index	. . . . .	289
