Contents

Preface	v
0. Auxiliary results from analysis	1
0.1 Notations	1
0.2 Some auxiliary results from measure theory	4
0.3 Some theorems on generalized derivatives	7
0.4 The integral operators P , P_0 and T	13
I. Quasiconformal mappings and solutions of Beltrami systems	23
I.1 The analytic definition of quasiconformal mappings, Beltrami systems	23
I.2 Existence and properties of schlicht Beltrami solutions	25
I.3 Compactness and convergence properties of quasiconformal mappings	32
II. Elliptic systems of partial differential equations of first order in the plane	40
II.1 Conditions and definitions	41
II.2 The representation theorem	43
II.3 Geometrical interpretation of (ν, μ) -solutions	46
II.4 Compactness	53
II.5 Differentiability, a-priori-estimates at interior points	54
II.6 Adjoint systems, the Cauchy integral theorem	62
III. Some function theoretic properties of (ν, μ)-solutions	65
III.1 Zeroes, isolated singularities	65
III.2 Argument principle, invariance of domains, maximum principle	67

III.3 Asymptotic expansions at finite points	69
III.4 Asymptotic expansions at the point ∞ , compactness	72
IV. Integral transformations and fundamental solutions	80
IV.1 Integral operators for (ν, μ) -systems	81
IV.2 Some special cases	84
IV.3 Construction of fundamental solutions by means of the kernels ϕ_1, ϕ_2	86
IV.4 Fundamental solutions in more general cases	88
V. Integral formulae for (ν, μ)-solutions	92
V.1 The generalized Cauchy integral formula	92
V.2 Relations between fundamental solutions	96
V.3 Cauchy integrals, saltus conditions	99
V.4 Generalization of the Schwarz and Poisson formulae	103
VI. Variational methods for schlicht (ν, μ)-solutions	109
VI.1 Preliminaries	110
VI.2 The variational formulae for κ -conformal boundary variation	116
VI.3 The variational formulae for inner variation	118
VI.4 Two examples of functionals	121
VI.5 Some transformations	122
VI.6 Functionals of Grötzsch-Teichmüller type with respect to $\Omega(\nu, \mu)$ and their extremal functions	128
VI.7 The two examples once more	134
VI.8 A special extremal problem	136
Bibliography	141
Index	144
