Reader's guide	xi
1 Classical harmonic analysis and Wiener's theorem	1
1.1 The algebra $L^1(\mathbb{R}^v)$; Fourier transforms	1
1.2 Functions in $L^1(\mathbb{R}^v)$	7
1.3 The Wiener-Lévy theorem	10
1.4 Wiener's theorem	12
1.5 Some subalgebras of $L^1(\mathbb{R}^v)$	16
1.6 The algebras $L^1_a(\mathbb{R}^v)$; Beurling algebras	18
2 Function algebras and the generalization of Wiener's theorem	25
2.1 Function algebras	25
2.2 Topological function algebras and Wiener's theorem	28
2.3 Examples of topological function algebras	31
2.4 The generalization of Wiener's theorem	35
2.5 Ditkin sets for function algebras	40
2.6 Ideals in function algebras; examples	44
2.7 Sets of spectral synthesis; examples, counter-examples	49
3 Locally compact groups and the Haar measure	56
3.1 Locally compact groups	56
3.2 Integration on locally compact spaces	61
3.3 The Haar measure	82
3.4 L^1 -spaces on groups	97
3.5 The algebra $L^1(G)$	104
3.6 The space $L^\infty(G)$	113
3.7 Beurling algebras	119
4 Locally compact abelian groups and the foundations of harmonic analysis	128
4.1 Locally compact abelian groups	128
4.2 Duality theory and structure theory	132
4.3 Some examples	138
4.4 The foundations of harmonic analysis	143
4.5 The principle of relativization	150

5 Functions on locally compact abelian groups	152
5.1 The functions σ and τ	152
5.2 Lemmas on functions in $L^1(G)$	155
5.3 Lemmas on functions in $L^1(G)$ (continued)	159
5.4 Some properties of $L^1(G)$ and $\mathcal{F}^1(\widehat{G})$	160
5.5 Poisson's formula	164
6 Wiener's theorem and locally compact abelian groups	169
6.1 Wiener's theorem for groups	169
6.2 Segal algebras, the abelian case	173
6.3 Beurling algebras	184
7 The spectrum and its applications	194
7.1 Definition and properties of the spectrum	194
7.2 Relativization and the spectrum	200
7.3 Sets of spectral synthesis for Beurling algebras	203
7.4 Ditkin sets on groups	212
8 Functions on general locally compact groups	221
8.1 Quasi-invariant measures on quotient spaces	221
8.2 The space $L^1(G/H)$	230
8.3 The property P_p	234
8.4 The invariant convex hull of a function in $L^1(G)$	242
8.5 The property $(\mathcal{M})$	247
8.6 The equivalence of the properties $(\mathcal{M})$ and P_1	251
8.7 The structure of groups with the property P_1	256
A Additional material	262
A.1 Domar's theorem	262
A.2 Malliavin's theorem	267
A.3 More on Segal algebras	272
A.4 The difference spectrum	282
B Notes and additional references	293
References	302
Summary of notations	316
Subject index	321
