UNIVERSITY PRESS

CONTENTS

I. Examples and basic definitions

§ 1. Incidence structures and incidence matrices	15
§ 2. Block designs and examples from affine and projective geometry	19
§ 3. t -designs, Steiner systems and configurations	28
§ 4. Isomorphisms, duality, and correlations	33
§ 5. Partitions of the block set and resolvability	38
§ 6. Group divisible incidence structures	45
§ 7. Transversal designs and nets	51
§ 8. Subspaces	59
§ 9. Hadamard designs	64

II. Combinatorial analysis of designs

§ 1. Basics	77
§ 2. Fisher's inequality for pairwise balanced designs	79
§ 3. Symmetric designs	86
§ 4. Symmetric designs continued: the theorem of Bruck, Chowla, and Ryser	95
§ 5. Balanced incidence structures with balanced duals	102
§ 6. More counting: the generalisation of Fisher's inequality	107
§ 7. Extensions of designs	113
§ 8. Affine designs	124
§ 9. The Hall-Connor theorem	136

III. Groups and designs

§ 1. Introduction	142
§ 2. Incidence morphisms	144
§ 3. Permutation groups	148
§ 4. Applications to incidence structures	154
§ 5. Examples from classical geometry	160
§ 6. Constructions of t -designs from groups	167
§ 7. Extensions of groups	175
§ 8. Construction of t -designs from base blocks	185

4.	Difference cycles	367
5.	Infinite t -designs	372
6.	Further constructions using difference cycles	375
7.	The existence of t -designs for large values of λ	377
8.	More transversal designs	386
9.	Unitals, ovals, and Baer subplanes	406

IX. Recursive constructions

1.	Product constructions	417
2.	Use of pairwise balanced designs	426
3.	Use of group divisible designs	431
4.	Applications of Hanani's lemmas	437
5.	Block designs of block size three and four	445
6.	Solution of Kirkman's school girl problem	448
7.	The basis of a closed set	451
8.	Block designs with block size 5	456
9.	Group divisible designs with block size 3 and 4	466
10.	Concluding remarks	469

X. Transversal designs and nets, continued

1.	A recursive construction	472
2.	Transversal designs with $\lambda > 1$	475
3.	A construction of Wilson	477
4.	Six and more mutually orthogonal Latin Squares	485
5.	The theorem of Chowla, Erdős, and Straus	487
6.	The Bose-Bush bound	490
7.	Bruck's completion theorem	495
8.	Maximal nets with large deficiency	506
9.	Translation nets and maximal nets with small deficiency	511
10.	Completion results for $\mu > 1$	523
11.	Extending symmetric nets	533
12.	Complete mappings and difference matrices	537
13.	Tarry's theorem	541

XI. Asymptotic existence theory

1.	Preliminaries	548
2.	The existence of Steiner systems with v in given residue classes	551
3.	The main theorem for Steiner systems $S(2, k; v)$	555

§ 4.	Difference cycles	367
§ 5.	Infinite t -designs	372
§ 6.	Further constructions using difference cycles	375
§ 7.	The existence of t -designs for large values of λ	377
§ 8.	More transversal designs	386
§ 9.	Unitals, ovals, and Baer subplanes	406

IX. Recursive constructions

§ 1.	Product constructions	417
§ 2.	Use of pairwise balanced designs	426
§ 3.	Use of group divisible designs	431
§ 4.	Applications of Hanani's lemmas	437
§ 5.	Block designs of block size three and four	445
§ 6.	Solution of Kirkman's school girl problem	448
§ 7.	The basis of a closed set	451
§ 8.	Block designs with block size 5	456
§ 9.	Group divisible designs with block size 3 and 4	466
§ 10.	Concluding remarks	469

X. Transversal designs and nets, continued

§ 1.	A recursive construction	472
§ 2.	Transversal designs with $\lambda > 1$	475
§ 3.	A construction of Wilson	477
§ 4.	Six and more mutually orthogonal Latin Squares	485
§ 5.	The theorem of Chowla, Erdős, and Straus	487
§ 6.	The Bose-Bush bound	490
§ 7.	Bruck's completion theorem	495
§ 8.	Maximal nets with large deficiency	506
§ 9.	Translation nets and maximal nets with small deficiency	511
§ 10.	Completion results for $\mu > 1$	523
§ 11.	Extending symmetric nets	533
§ 12.	Complete mappings and difference matrices	537
§ 13.	Tarry's theorem	541

XI. Asymptotic existence theory

§ 1.	Preliminaries	548
§ 2.	The existence of Steiner systems with v in given residue classes	551
§ 3.	The main theorem for Steiner systems $S(2, k; v)$	555

§ 4.	The eventual periodicity of closed sets	559
§ 5.	The main theorem for $\lambda = 1$	562
§ 6.	The main theorem for $\lambda > 1$	565
§ 7.	An existence theorem for resolvable block designs	569

XII. Characterisations of classical designs

§ 1.	Projective and affine spaces as linear spaces	573
§ 2.	Characterisations of projective spaces	576
§ 3.	Characterisation of affine spaces	587
§ 4.	Locally projective linear spaces	593
§ 5.	Good blocks	598
§ 6.	Concluding remarks	606

Appendix. Tables

§ 1.	Block designs	612
§ 2.	Symmetric designs	622
§ 3.	Abelian difference sets	628
§ 4.	Small Steiner systems	636
§ 5.	Series of Steiner systems	640
§ 6.	Remark on t -designs with $t \geq 3$	642
§ 7.	Orthogonal Latin squares	643
