# Notes on Infinite Permutation Groups

Springer

# Contents

**1 Some Group Theory** 1

**2 Groups acting on Sets** 9
- 2.1 Group actions . . . 9
- 2.2 Permutation groups . . . 11
- 2.3 Cycles and cycle types . . . 14
- 2.4 Basic facts about symmetric groups . . . 16

**3 Transitivity** 19
- 3.1 Orbits and transitivity . . . 19
- 3.2 Stabilisers and transitivity . . . 21
- 3.3 Extensions of transitivity . . . 23
- 3.4 Homogeneity . . . 26

**4 Primitivity** 31
- 4.1 $G$-congruences . . . 31
- 4.2 Primitive spaces . . . 33
- 4.3 Extensions of primitivity . . . 37

**5 Suborbits and Orbitals** 39
- 5.1 Suborbits and orbitals . . . 39
- 5.2 Orbital graphs and primitivity . . . 41

**6 More about Symmetric Groups** 49
- 6.1 Normal subgroups of symmetric groups . . . 50
- 6.2 Groups with finitary permutations . . . 52

**7 Linear Groups** 57
- 7.1 General Linear Groups . . . 57

7.2 Projective groups . . . . . 61
7.3 Affine groups . . . . . 63
7.4 Projective and affine spaces . . . . . 65

**8 Wreath Products** **67**
8.1 Definition . . . . . 67
8.2 Wreath products as permutation groups . . . . . 70
8.3 Imprimitivity of wreath products . . . . . 71
8.4 Variations of wreath products . . . . . 74

**9 Rational Numbers** **77**
9.1 Cantor's Theorem . . . . . 77
9.2 Back and forth *vs* going forth . . . . . 81
9.3 Order-automorphisms of the rationals . . . . . 82

**10 Jordan Groups** **87**
10.1 Definitions and some examples . . . . . 87
10.2 Basic properties of Jordan sets . . . . . 88
10.3 More properties of Jordan sets . . . . . 90
10.4 Cofinite Jordan sets . . . . . 94

**11 Examples of Jordan Groups** **99**
11.1 Some examples . . . . . 99
11.1.1 Finite primitive examples . . . . . 99
11.1.2 Highly transitive examples . . . . . 100
11.2 Linear groups and Steiner systems . . . . . 101
11.3 Linear relational structures . . . . . 104
11.3.1 Linear order . . . . . 105
11.3.2 Linear betweenness relation . . . . . 107
11.3.3 Circular order . . . . . 108
11.3.4 Separation relation . . . . . 110

**12 Relations related to betweenness** **115**
12.1 Semilinear order . . . . . 115
12.2 $C$-relations . . . . . 121
12.3 General betweenness relations . . . . . 124
12.4 $D$-relations . . . . . 126
12.5 Primitive groups with primitive Jordan sets . . . . . 128

**13 Classification Theorems** **131**
13.1 Statement of the theorems . . . . . 131
13.2 Some recognition theorems . . . . . 135
13.3 Some basic lemmas . . . . . 138
13.4 Outline of the proof of Theorem 13.3 . . . . . 140

**14 Homogeneous Structures** **143**
14.1 Some model theory . . . . . 143
14.2 Building homogeneous structures . . . . . 147
14.3 Examples of homogeneous structures . . . . . 152
14.4 Proof of Fraïssé's Theorem . . . . . 155

**15 The Hrushovski Construction** **159**
15.1 Generalisation of Fraïssé's Theorem . . . . . 159
15.2 Building a geometry . . . . . 161
15.3 Extending the geometry . . . . . 166

**16 Applications and Open Questions** **171**
16.1 Bounded groups . . . . . 171
16.2 Cycle types . . . . . 172
16.3 Strictly minimal sets . . . . . 174
16.4 'Back and forth' arguments . . . . . 176
16.5 Homogeneous structures . . . . . 177
16.6 Structure of Jordan groups . . . . . 177
16.7 Generalisations of Jordan groups . . . . . 180

**Bibliography** **181**

**List of Symbols** **189**

**Index** **195**
