AN A K PETERS BOOK

Contents

Preface	xv
Notation	xvii
I Some Linear Algebra	1
1 Linear Systems	
1.1 Matrix Notation	3
1.2 Matrix Multiplication	5
1.3 Gaussian Elimination	6
1.4 Gauss-Jordan Algorithm	7
1.5 LU-Factorization	9
1.6 Cramer's Rule	10
1.7 Notes and Problems	11
2 Linear Spaces	
2.1 Basis and Dimension	13
2.2 Change of Bases	14
2.3 Linear Maps	16
2.4 Kernel and Fibers	17
2.5 Point Spaces	18
2.6 Notes and Problems	20
3 Least Squares	
3.1 Overdetermined Systems	21
3.2 Homogeneous Systems	23
3.3 Constrained Least Squares	24
3.4 Linearization	25

3.5	Underdetermined Systems	26
3.6	Notes and Problems	27

II Images and Projections **29**

4 Parallel Projections

4.1	Pohlke's Theorem	31
4.2	Orthogonal Projections	35
4.3	Computing a Parallel Projection	37
4.4	Projecting Rays	39
4.5	Notes and Problems	39

5 Moving the Object

5.1	Euclidean Motions	41
5.2	Composite Motions	43
5.3	Euler Angles	45
5.4	Coordinate Extension	46
5.5	Notes and Problems	47

6 Perspective Drawings

6.1	Homogeneous Coordinates	48
6.2	Central Projection	49
6.3	Moving the Object	51
6.4	Vanishing Points	52
6.5	Completing a Perspective Drawing	54
6.6	Moving the Camera	55
6.7	Spatial Perspective Maps	56
6.8	Notes and Problems	57

7 The Mapping Matrix

7.1	Main Theorem	59
7.2	Camera Data	61
7.3	The Spatial Perspective	62
7.4	Vanishing Points of the System	62
7.5	Stereo Pairs	67
7.6	Notes and Problems	68

8 Reconstruction

8.1 Knowing the Object	71
8.2 Straight Lines in the Image Plane	72
8.3 Several Images	73
8.4 Camera Calibration	75
8.5 Notes and Problems	76

III Affine Geometry 77**9 Affine Space**

9.1 Affine Coordinates	79
9.2 Affine Subspaces	80
9.3 Hyperplanes	82
9.4 Intersection	83
9.5 Parallel Bundles	84
9.6 Notes and Problems	85

10 The Barycentric Calculus

10.1 Barycentric Coordinates	86
10.2 Subspaces	88
10.3 Affine Independence	89
10.4 Hyperplanes	91
10.5 Join	92
10.6 Volumes	93
10.7 A Generalization of Barycentric Coordinates	95
10.8 Notes and Problems	96

11 Affine Maps

11.1 Barycentric Representation	99
11.2 Affine Representation	101
11.3 Parallelism and Ratio	102
11.4 Fibers	102
11.5 Affinities	104
11.6 Correspondence of Hyperplanes	104
11.7 Notes and Problems	105

12 Affine Figures	
12.1 Triangles	107
12.2 Quadrangles	109
12.3 Polygons and Curves	110
12.4 Conic Sections	112
12.5 Axial Affinities	114
12.6 Dilatation	117
12.7 Notes and Problems	118
13 Quadrics in Affine Spaces	
13.1 The Equation of a Quadric	120
13.2 Midpoints	122
13.3 Singular Points	124
13.4 Tangents	125
13.5 Tangent Planes	126
13.6 Polar Planes	127
13.7 Notes and Problems	129
14 More on Affine Quadrics	
14.1 Diametric Planes	131
14.2 Conjugate Directions	133
14.3 Special Affine Coordinates	134
14.4 Affine Normal Forms	136
14.5 The Types of Quadrics in the Plane	138
14.6 The Types of Quadrics in Space	139
14.7 Notes and Problems	141
15 Homothetic Pencils	
15.1 The Equation	143
15.2 Asymptotic Cones	144
15.3 Homothetic Paraboloids	145
15.4 Intersection with a Subspace	146
15.5 Parallel Intersections	148
15.6 Notes and Problems	150

IV Euclidean Geometry **153**

16 The Euclidean Space

16.1 The Distance of Points	155
16.2 The Dot Product	156
16.3 Gram-Schmidt Orthogonalization	158
16.4 Cartesian Coordinates	159
16.5 The Alternating Product	160
16.6 Euclidean Motions	161
16.7 Shortest Distances	162
16.8 The Steiner Surface in Euclidean Space	163
16.9 Notes and Problems	166

17 Some Euclidean Figures

17.1 The Orthocenter	168
17.2 The Incircle	169
17.3 The Circumcircle	170
17.4 Power of a Point	172
17.5 Radical Center	173
17.6 Orthogonal Spheres	174
17.7 Centers of Similitude	175
17.8 Notes and Problems	177

18 Quadrics in Euclidean Space

18.1 Normals	179
18.2 Principal Axes	180
18.3 Real and Symmetric Matrices	181
18.4 Principal Axis Transformation	182
18.5 Normal Forms of Euclidean Quadrics	183
18.6 Notes and Problems	186

19 Focal Properties

19.1 The Ellipse	188
19.2 The Hyperbola	190
19.3 The Parabola	192
19.4 Confocal Conic Sections	193
19.5 Focal Conics	195
19.6 Focal Distances	198

19.7 Dupin's Cyclide	199
19.8 Notes and Problems	202

V Some Projective Geometry **205**

20 The Projective Space

20.1 Homogeneous Coordinates	207
20.2 Projective Coordinates	209
20.3 The Equations of Planes and Subspaces	211
20.4 The Equation of a Point	212
20.5 Pencils and Bundles	214
20.6 Duality	216
20.7 Notes and Problems	219

21 Projective Maps

21.1 Matrix Notation	221
21.2 Exceptional Spaces	223
21.3 The Dual Map	224
21.4 Collineations and Correlations	225
21.5 The Crossratio	227
21.6 Harmonic Position	229
21.7 Notes and Problems	230

22 Some Projective Figures

22.1 Complete Quadruples in the Plane	231
22.2 Desargues' Configuration	234
22.3 Pappus' Configuration	235
22.4 Conic Sections	237
22.5 Pascal's Theorem	238
22.6 Brianchon's Theorem	240
22.7 Rational Bézier Curves	242
22.8 Rational Bézier surfaces	244
22.9 Notes and Problems	245

23 Projective Quadrics

23.1 Projective Quadrics	247
23.2 Tangent Planes	248

23.3	The Role of the Ideal Plane	250
23.4	Harmonic Points and Polarity	252
23.5	Pencils of Quadrics	253
23.6	Ranges of Quadrics	255
23.7	The Imaginary in Projective Geometry	257
23.8	The Steiner Surface	260
23.9	Notes and Problems	262

VI Some Descriptive Geometry **265**

24 Associated Projections

24.1	Plan and Elevation	267
24.2	Side Elevation	269
24.3	Special Side Elevations	271
24.4	Cross Elevation	273
24.5	Curves on Surfaces	276
24.6	Canal Surface	278
24.7	The Four-Dimensional Space	280
24.8	Notes and Problems	282

25 Penetrations

25.1	Intersections	284
25.2	Distinguished Points	286
25.3	Double Points	287
25.4	The Order	289
25.5	Bezout's Theorem	291
25.6	Decompositions	292
25.7	Projections	294
25.8	Notes and Problems	295

VII Basic Algebraic Geometry **297**

26 Implicit Curves and Surfaces

26.1	Plane Algebraic Curves	299
26.2	Multiple Points	300

26.3	Euler's Identity	302
26.4	Polar Forms of Curves	303
26.5	Algebraic Surfaces	305
26.6	Polar Forms of Surfaces	307
26.7	Notes and Problems	309
27	Parametric Curves and Surfaces	
27.1	Rational Curves	310
27.2	Changing the Parameter	312
27.3	Osculants of a Curve	314
27.4	Bézier Curves	317
27.5	Splines	319
27.6	Osculants of a Surface	321
27.7	Notes and Problems	324
28	Some Elimination Methods	
28.1	Sylvester's Method	327
28.2	Cayley's Method	329
28.3	Computing Cayley's Matrix	330
28.4	Dixon's Method	331
28.5	Computing Dixon's Matrix	332
28.6	Triangular Matrices	333
28.7	Notes and Problems	335
29	Implicitization, Inversion and Intersection	
29.1	Parametric Curves in the Plane	337
29.2	Parametric Space Curves	340
29.3	Normal Curves	341
29.4	Parametric Tensor Product Surfaces	343
29.5	Parametric Triangular Surfaces	345
29.6	Intersections	346
29.7	Notes and Problems	348

VIII Differential Geometry 351**30 Curves**

30.1 Parametric Curves and Arc Length	353
30.2 The Frenet Frame	354
30.3 Moving the Frame	356
30.4 The Spherical Image	357
30.5 Osculating Plane and Sphere	358
30.6 Osculating Curves	361
30.7 Notes and Problems	362

31 Curves on Surfaces

31.1 Parametric Surfaces and Arc Element	366
31.2 The Local Frame	369
31.3 The Curvature of a Curve	370
31.4 Meusnier's Theorem	371
31.5 The Darboux Frame	373
31.6 Notes and Problems	374

32 Surfaces

32.1 Dupin's Indicatrix and Euler's Theorem	376
32.2 Gaussian Curvature and Mean Curvature	379
32.3 Conjugate Directions and Asymptotic Lines	381
32.4 Ruled Surfaces and Developables	382
32.5 Contact of Order r	385
32.6 Notes and Problems	386

Bibliography 389**Index 395**
