**MINIMAX METHODS
IN CRITICAL POINT THEORY
WITH APPLICATIONS
TO DIFFERENTIAL EQUATIONS**

Paul H. Rabinowitz

Published for the
Conference Board of the Mathematical Sciences
by the
American Mathematical Society
Providence, Rhode Island

Contents

Preface	vii
1. An Overview	1
2. The Mountain Pass Theorem and Some Applications	9
3. Some Variants of the Mountain Pass Theorem	21
4. The Saddle Point Theorem	25
5. Some Generalizations of the Mountain Pass Theorem	30
6. Applications to Hamiltonian Systems	37
7. Functionals with Symmetries and Index Theories	47
8. Multiple Critical Points of Symmetric Functionals: Problems with Constraints	50
9. Multiple Critical Points of Symmetric Functionals: The Unconstrained Case	55
10. Perturbations from Symmetry	63
11. Variational Methods in Bifurcation Theory	72
Appendix A	83
Appendix B	91
References	98
