The Classical Decision Problem

Springer

Table of Contents

Preface	VII
1. Introduction: The Classical Decision Problem.....	1
1.1 The Original Problem	1
1.2 The Transformation of the Classical Decision Problem	5
1.3 What Is and What Isn't in this Book	8
<hr/>	
Part I. Undecidable Classes	
2. Reductions	17
2.1 Undecidability and Conservative Reduction	18
2.1.1 The Church-Turing Theorem and Reduction Classes ..	18
2.1.2 Trakhtenbrot's Theorem and Conservative Reductions ..	33
2.1.3 Inseparability and Model Complexity	38
2.2 Logic and Complexity	43
2.2.1 Propositional Satisfiability	44
2.2.2 The Spectrum Problem and Fagin's Theorem	48
2.2.3 Capturing Complexity Classes	57
2.2.4 A Decidable Prefix-Vocabulary Class	66
2.3 The Classifiability Problem	70
2.3.1 The Problem	70
2.3.2 Well Partially Ordered Sets	71
2.3.3 The Well Quasi Ordering of Prefix Sets	74
2.3.4 The Well Quasi Ordering of Arity Sequences	77
2.3.5 The Classifiability of Prefix-Vocabulary Sets	78
2.4 Historical Remarks	81
3. Undecidable Standard Classes for Pure Predicate Logic ..	85
3.1 The Kahr Class	87
3.1.1 Domino Problems	87
3.1.2 Formalization of Domino Problems by $[\forall\exists\forall, (0, \omega)]$ -Formulae	91
3.1.3 Graph Interpretation of $[\forall\exists\forall, (0, \omega)]$ -Formulae	98

3.1.4	The Remaining Cases Without \exists^*	109
3.2	Existential Interpretation for $[\forall^3 \exists^*, (0, 1)]$	115
3.3	The Gurevich Class	124
3.3.1	The Proof Strategy	124
3.3.2	Reduction to Diagonal-Freeness	130
3.3.3	Reduction to Shift-Reduced Form	131
3.3.4	Reduction to F_i -Elimination Form	135
3.3.5	Elimination of Monadic F_i	137
3.3.6	The Kostyrko-Genenz and Surányi Classes	143
3.4	Historical Remarks	146
4.	Undecidable Standard Classes with Functions or Equality	149
4.1	Classes with Functions and Equality	150
4.2	Classes with Functions but Without Equality	159
4.3	Classes with Equality but Without Functions: the Goldfarb Classes	161
4.3.1	Formalization of Natural Numbers in $[\forall^2 \exists^*, (\omega, \omega), (0)]$	163
4.3.2	Using Only One Existential Quantifier	171
4.3.3	Encoding the Non-Auxiliary Binary Predicates	178
4.3.4	Encoding the Auxiliary Binary Predicates of NUM*	186
4.4	Historical Remarks	188
5.	Other Undecidable Cases	189
5.1	Krom and Horn Formulae	190
5.1.1	Krom Prefix Classes Without Functions or Equality	190
5.1.2	Krom Prefix Classes with Functions or Equality	198
5.2	Few Atomic Subformulae	203
5.2.1	Few Function and Equality Free Atoms	205
5.2.2	Few Equalities and Inequalities	210
5.2.3	Horn Clause Programs With One Krom Rule	216
5.3	Undecidable Logics with Two Variables	219
5.3.1	First-Order Logic with the Choice Operator	220
5.3.2	Two-Variable Logic with Cardinality Comparison	223
5.4	Conjunctions of Prefix-Vocabulary Classes	227
5.4.1	Reduction to the Case of Conjunctions	228
5.4.2	Another Classifiability Theorem	228
5.4.3	Some Results and Open Problems	229
5.5	Historical Remarks	233

Part II. Decidable Classes and Their Complexity

6. Standard Classes with the Finite Model Property	239
6.1 Techniques for Proving Complexity Results	242
6.1.1 Domino Problems Revisited	242
6.1.2 Succinct Descriptions of Inputs	247
6.2 The Classical Solvable Cases	249
6.2.1 Monadic Formulae	249
6.2.2 The Bernays-Schönfinkel-Ramsey Class	257
6.2.3 The Gödel-Kalmár-Schütte Class: a Probabilistic Proof	261
6.3 Formulae with One \forall	270
6.3.1 A Satisfiability Test for $[\exists^*\forall\exists^*, \text{all}, \text{all}]$	271
6.3.2 The Ackermann Class	281
6.3.3 The Ackermann Class with Equality	285
6.4 Standard Classes of Modest Complexity	290
6.4.1 The Relational Classes in P, NP and Co-NP	290
6.4.2 Fragments of the Theory of One Unary Function	295
6.4.3 Other Functional Classes	304
6.5 Finite Model Property vs. Infinity Axioms	306
6.6 Historical Remarks	310
7. Monadic Theories and Decidable Standard Classes with Infinity Axioms	315
7.1 Automata, Games and Decidability of Monadic Theories	316
7.1.1 Monadic Theories	316
7.1.2 Automata on Infinite Words and the Monadic Theory of One Successor	318
7.1.3 Tree Automata, Rabin's Theorem and Forgetful Determinacy	323
7.1.4 The Forgetful Determinacy Theorem for Graph Games	329
7.2 The Monadic Second-Order Theory of One Unary Function	337
7.2.1 Decidability Results for One Unary Function	338
7.2.2 The Theory of One Unary Function is not Elementary Recursive	341
7.3 The Shelah Class	345
7.3.1 Algebras with One Unary Operation	345
7.3.2 Canonic Sentences	348
7.3.3 Terminology and Notation	351
7.3.4 1-Satisfiability	354
7.3.5 2-Satisfiability	357
7.3.6 Refinements	359
7.3.7 Villages	360
7.3.8 Contraction	365
7.3.9 Towns	369

XII Table of Contents

7.3.10	The Final Reduction	370
7.4	Historical Remarks	374
8.	Other Decidable Cases	377
8.1	First-Order Logic with Two Variables	377
8.2	Unification and Applications to the Decision Problem	382
8.2.1	Unification	382
8.2.2	Herbrand Formulae	387
8.2.3	Positive First-Order Logic	388
8.3	Decidable Classes of Krom Formulae	390
8.3.1	The Chain Criterion	390
8.3.2	The Aanderaa-Lewis Class	393
8.3.3	The Maslov Class	400
8.4	Historical Remarks	404
A.	Appendix: Tiling Problems	407
A.1	Introduction	407
A.2	The Origin Constrained Domino Problem	408
A.3	Robinson's Aperiodic Tile Set	410
A.4	The Unconstrained Domino Problem	414
A.5	The Periodic Problem and the Inseparability Result	419
	Annotated Bibliography	421
	Index	477
