Multigrid methods

Co-published in the United States with
John Wiley & Sons, Inc., New York

Table of Contents

Preface

1. Introduction to Iterative Methods	1
General linear iterative processes	5
Convergence acceleration	7
Bibliographical Notes	8
2. Model problems and Sobolev spaces	9
Weak solution	9
Galerkin method	11
A two level algorithm	16
Bibliographical Notes	20
3. Abstract Multilevel Algorithms	21
V-cycle algorithm	22
Equivalence lemma	27
Estimates for the additive preconditioner	29, 39
V-cycle estimates	34, 39, 41, 44, 47
Other multigrid algorithms	50
Theorem of Braess and Hackbusch	53
Bibliographical Notes	55
4. Multigrid Algorithms with Nonnested Spaces and Varying Forms	58
General multigrid algorithm	59
V-cycle estimate	62
W-cycle estimate	64
Variable V-cycle estimate	67
Variable V-cycle as a preconditioner	68
Bibliographical Notes	70
5. Construction of Classes of Smoothers	71
Additive smoother	72
Multiplicative smoother	75

Bibliographical Notes	78
6. Application to second order elliptic problems	79
The Dirichlet problem	79
Domains with curved boundaries	79
Mesh refinements	87
Bibliographical Notes	88
7. Perturbation of Forms	89
Finite elements with quadrature	91
Finite difference example	92
Bibliographical Notes	94
8. Pseudodifferential operators of order minus one	95
The general problem	95
The approximate problem	96
Multigrid algorithm	99
Multigrid analysis	102
Boundary integral operator	103
V-cycle estimates	106
Bibliographical Notes	107
9. Application to fourth order problems	108
Biharmonic Dirichlet problem	108
Morley nonconforming method	109
Multigrid for the Morley method	111
Mixed method of Ciarlet and Raviart	116
Multigrid for the Ciarlet-Raviart mixed method	117
Bibliographical Notes	118
10. Implementation, work estimates, and full multigrid	120
Implementation issues	120
Work estimates	126
Full multigrid	127

Bibliographical Notes	129
Appendix A: The Conjugate Gradient Algorithm	131
Preconditioned conjugate gradient (PCG)	131
Analysis of the error of PCG	132
Derivation of the computational algorithm	135
Bibliographical Notes	139
Appendix B: Introduction to interpolation spaces	140
Real Method of Interpolation	140
The Hilbert space case	142
Interpolation of operators	143
Simultaneous approximation in scales of Banach spaces	145
Bibliographical Notes	147
Appendix C: Glossary of conditions	148
References	150
Index	158
