Contents

<i>Preface</i>	<i>vii</i>
<i>Notations and Conventions</i>	<i>viii</i>
Chapter I—Galois Cohomology	1
0 Preliminaries	2
1 Duality relative to a class formation	19
2 Local fields	31
3 Abelian varieties over local fields	49
4 Global fields	60
5 Global Euler-Poincaré characteristics	81
6 Abelian varieties over global fields	89
7 An application to the conjecture of Birch and Swinnerton-Dyer	114
8 Abelian class field theory, in the sense of Langlands	123
9 Other applications	143
Appendix A: Class field theory for function fields	154
Chapter II—Étale Cohomology	171
0 Preliminaries	171
1 Local results	181
2 Global results: preliminary calculations	200
3 Global results: the main theorem	216
4 Global results: complements	230
5 Global results: abelian schemes	242
6 Global results: singular schemes	251
7 Global results: higher dimensions	254
Chapter III—Flat Cohomology	267
0 Preliminaries	268
1 Local results: mixed characteristic, finite group schemes	285

2	Local results: mixed characteristic, abelian varieties	303
3	Global results: number field case	311
4	Local results: mixed characteristic, perfect residue field	318
5	Two exact sequences	329
6	Local fields of characteristic p	337
7	Local results: equicharacteristic	348
8	Global results: curves over finite fields, finite sheaves	360
9	Global results: curves over finite fields, Néron models	367
10	Local results: equicharacteristic, perfect residue field	374
11	Global results: curves over perfect fields	379
	Appendix A: Embedding finite group schemes	383
	Appendix B: Extending finite group schemes	390
	Appendix C: Biextensions and Néron models	395
	Bibliography	410
	Index	420
