

INTRODUCTION TO QUANTUM MECHANICS

With Applications to Chemistry

BY

LINUS PAULING

*Research Professor, Linus Pauling
Institute of Science and Medicine,
Palo Alto, California*

AND

E. BRIGHT WILSON, JR.

*Theodore William Richards
Professor of Chemistry,
Emeritus, Harvard University*

CONTENTS

PREFACE	PAGE iii
-------------------	-------------

CHAPTER I

SURVEY OF CLASSICAL MECHANICS

SECTION

1. Newton's Equations of Motion in the Lagrangian Form	2
1a. The Three-dimensional Isotropic Harmonic Oscillator.	4
1b. Generalized Coordinates.	6
1c. The Invariance of the Equations of Motion in the Lagrangian Form.	7
1d. An Example: The Isotropic Harmonic Oscillator in Polar Coordinates	9
1e. The Conservation of Angular Momentum	11
2. The Equations of Motion in the Hamiltonian Form	14
2a. Generalized Momenta.	14
2b. The Hamiltonian Function and Equations.	16
2c. The Hamiltonian Function and the Energy	16
2d. A General Example.	17
3. The Emission and Absorption of Radiation.	21
4. Summary of Chapter I.	23

CHAPTER II

THE OLD QUANTUM THEORY

5. The Origin of the Old Quantum Theory	25
5a. The Postulates of Bohr	26
5b. The Wilson-Sommerfeld Rules of Quantization.	28
5c. Selection Rules. The Correspondence Principle	29
6. The Quantization of Simple Systems.	30
6a. The Harmonic Oscillator. Degenerate States	30
6b. The Rigid Rotator	31
6c. The Oscillating and Rotating Diatomic Molecule.	32
6d. The Particle in a Box.	33
6e. Diffraction by a Crystal Lattice	34
7. The Hydrogen Atom.	36
7a. Solution of the Equations of Motion	36
7b. Application of the Quantum Rules. The Energy Levels.	39
7c. Description of the Orbits	43
7d. Spatial Quantization	45
8. The Decline of the Old Quantum Theory.	47

CHAPTER III

THE SCHRÖDINGER WAVE EQUATION WITH THE
HARMONIC OSCILLATOR AS AN EXAMPLE

9. The Schrödinger Wave Equation	50
9a. The Wave Equation Including the Time.	53
9b. The Amplitude Equation	56
9c. Wave Functions. Discrete and Continuous Sets of Characteristic Energy Values.	58
9d. The Complex Conjugate Wave Function $\Psi^*(x, t)$	63
10. The Physical Interpretation of the Wave Functions	63
10a. $\Psi^*(x, t)\Psi(x, t)$ as a Probability Distribution Function.	63
10b. Stationary States.	64
10c. Further Physical Interpretation. Average Values of Dynamical Quantities.	65
11. The Harmonic Oscillator in Wave Mechanics.	67
11a. Solution of the Wave Equation.	67
11b. The Wave Functions for the Harmonic Oscillator and their Physical Interpretation	73
11c. Mathematical Properties of the Harmonic Oscillator Wave Functions	77

CHAPTER IV

THE WAVE EQUATION FOR A SYSTEM OF POINT
PARTICLES IN THREE DIMENSIONS

12. The Wave Equation for a System of Point Particles.	84
12a. The Wave Equation Including the Time.	85
12b. The Amplitude Equation	86
12c. The Complex Conjugate Wave Function $\Psi^*(x_1 \cdots x_N, t)$	88
12d. The Physical Interpretation of the Wave Functions.	88
13. The Free Particle.	90
14. The Particle in a Box	95
15. The Three-dimensional Harmonic Oscillator in Cartesian Coordinates	100
16. Curvilinear Coordinates	103
17. The Three-dimensional Harmonic Oscillator in Cylindrical Coordinates	105

CHAPTER V

THE HYDROGEN ATOM

18. The Solution of the Wave Equation by the Polynomial Method and the Determination of the Energy Levels	113
18a. The Separation of the Wave Equation. The Translational Motion	113
18b. The Solution of the φ Equation.	117

CONTENTS

vii

SECTION	PAGE
18c. The Solution of the ϑ Equation.	118
18d. The Solution of the r Equation.	121
18e. The Energy Levels	124
19. Legendre Functions and Surface Harmonics.	125
19a. The Legendre Functions or Legendre Polynomials.	126
19b. The Associated Legendre Functions.	127
20. The Laguerre Polynomials and Associated Laguerre Functions	129
20a. The Laguerre Polynomials.	129
20b. The Associated Laguerre Polynomials and Functions	131
21. The Wave Functions for the Hydrogen Atom.	132
21a. Hydrogen-like Wave Functions.	132
21b. The Normal State of the Hydrogen Atom	139
21c. Discussion of the Hydrogen-like Radial Wave Functions	142
21d. Discussion of the Dependence of the Wave Functions on the Angles ϑ and φ	146

CHAPTER VI

PERTURBATION THEORY

22. Expansions in Series of Orthogonal Functions.	151
23. First-order Perturbation Theory for a Non-degenerate Level	156
23a. A Simple Example: The Perturbed Harmonic Oscillator.	160
23b. An Example: The Normal Helium Atom.	162
24. First-order Perturbation Theory for a Degenerate Level	165
24a. An Example: Application of a Perturbation to a Hydrogen Atom.	172
25. Second-order Perturbation Theory.	176
25a. An Example: The Stark Effect of the Plane Rotator	177

CHAPTER VII

THE VARIATION METHOD AND OTHER APPROXIMATE METHODS

26. The Variation Method.	180
26a. The Variational Integral and its Properties.	180
26b. An Example: The Normal State of the Helium Atom	184
26c. Application of the Variation Method to Other States	186
26d. Linear Variation Functions.	186
26e. A More General Variation Method	189
27. Other Approximate Methods	191
27a. A Generalized Perturbation Theory.	191
27b. The Wentzel-Kramers-Brillouin Method.	198
27c. Numerical Integration.	201
27d. Approximation by the Use of Difference Equations	202
27e. An Approximate Second-order Perturbation Treatment	204

CHAPTER VIII

THE SPINNING ELECTRON AND THE PAULI EXCLUSION
PRINCIPLE, WITH A DISCUSSION OF THE HELIUM ATOM

28. The Spinning Electron.	207
29. The Helium Atom. The Pauli Exclusion Principle	210
29a. The Configurations $1s2s$ and $1s2p$	210
29b. The Consideration of Electron Spin. The Pauli Exclusion Principle.	214
29c. The Accurate Treatment of the Normal Helium Atom.	221
29d. Excited States of the Helium Atom.	225
29e. The Polarizability of the Normal Helium Atom.	226

CHAPTER IX

MANY-ELECTRON ATOMS

30. Slater's Treatment of Complex Atoms.	230
30a. Exchange Degeneracy.	230
30b. Spatial Degeneracy.	233
30c. Factorization and Solution of the Secular Equation.	235
30d. Evaluation of Integrals	239
30e. Empirical Evaluation of Integrals. Applications.	244
31. Variation Treatments for Simple Atoms	246
31a. The Lithium Atom and Three-electron Ions	247
31b. Variation Treatments of Other Atoms.	249
32. The Method of the Self-consistent Field	250
32a. Principle of the Method.	250
32b. Relation of the Self-consistent Field Method to the Varia- tion Principle	252
32c. Results of the Self-consistent Field Method	254
33. Other Methods for Many-electron Atoms.	256
33a. Semi-empirical Sets of Screening Constants	256
33b. The Thomas-Fermi Statistical Atom	257

CHAPTER X

THE ROTATION AND VIBRATION OF MOLECULES

34. The Separation of Electronic and Nuclear Motion.	259
35. The Rotation and Vibration of Diatomic Molecules	263
35a. The Separation of Variables and Solution of the Angular Equations.	264
35b. The Nature of the Electronic Energy Function.	266
35c. A Simple Potential Function for Diatomic Molecules	267
35d. A More Accurate Treatment. The Morse Function	271
36. The Rotation of Polyatomic Molecules.	275
36a. The Rotation of Symmetrical-top Molecules	275
36b. The Rotation of Unsymmetrical-top Molecules.	280

CONTENTS

ix

SECTION	PAGE
37. The Vibration of Polyatomic Molecules	282
37a. Normal Coordinates in Classical Mechanics	282
37b. Normal Coordinates in Quantum Mechanics.	288
38. The Rotation of Molecules in Crystals.	290

CHAPTER XI

PERTURBATION THEORY INVOLVING THE TIME, THE EMISSION AND ABSORPTION OF RADIATION, AND THE RESONANCE PHENOMENON

39. The Treatment of a Time-dependent Perturbation by the Method of Variation of Constants	294
39a. A Simple Example	296
40. The Emission and Absorption of Radiation.	299
40a. The Einstein Transition Probabilities	299
40b. The Calculation of the Einstein Transition Probabilities by Perturbation Theory	302
40c. Selection Rules and Intensities for the Harmonic Oscillator	306
40d. Selection Rules and Intensities for Surface-harmonic Wave Functions	306
40e. Selection Rules and Intensities for the Diatomic Molecule. The Franck-Condon Principle	309
40f. Selection Rules and Intensities for the Hydrogen Atom . .	312
40g. Even and Odd Electronic States and their Selection Rules.	313
41. The Resonance Phenomenon	314
41a. Resonance in Classical Mechanics.	315
41b. Resonance in Quantum Mechanics	318
41c. A Further Discussion of Resonance.	322

CHAPTER XII

THE STRUCTURE OF SIMPLE MOLECULES

42. The Hydrogen Molecule-ion	327
42a. A Very Simple Discussion	327
42b. Other Simple Variation Treatments.	331
42c. The Separation and Solution of the Wave Equation. . . .	333
42d. Excited States of the Hydrogen Molecule-ion.	340
43. The Hydrogen Molecule	340
43a. The Treatment of Heitler and London.	340
43b. Other Simple Variation Treatments.	345
43c. The Treatment of James and Coolidge	349
43d. Comparison with Experiment	351
43e. Excited States of the Hydrogen Molecule	353
43f. Oscillation and Rotation of the Molecule. Ortho and Para Hydrogen.	355
44. The Helium Molecule-ion He_2^+ and the Interaction of Two Normal Helium Atoms	358
44a. The Helium Molecule-ion He_2^+	358

SECTION	PAGE
44b. The Interaction of Two Normal Helium Atoms.	361
45. The One-electron Bond, the Electron-pair Bond, and the Three-electron Bond.	362

CHAPTER XIII

THE STRUCTURE OF COMPLEX MOLECULES

46. Slater's Treatment of Complex Molecules	366
46a. Approximate Wave Functions for the System of Three Hydrogen Atoms.	368
46b. Factoring the Secular Equation.	369
46c. Reduction of Integrals.	370
46d. Limiting Cases for the System of Three Hydrogen Atoms	372
46e. Generalization of the Method of Valence-bond Wave Functions	374
46f. Resonance among Two or More Valence-bond Structures	377
46g. The Meaning of Chemical Valence Formulas.	380
46h. The Method of Molecular Orbitals	381

CHAPTER XIV

MISCELLANEOUS APPLICATIONS OF QUANTUM MECHANICS

47. Van der Waals Forces	383
47a. Van der Waals Forces for Hydrogen Atoms	384
47b. Van der Waals Forces for Helium.	387
47c. The Estimation of Van der Waals Forces from Molecular Polarizabilities.	387
48. The Symmetry Properties of Molecular Wave Functions	388
48a. Even and Odd Electronic Wave Functions. Selection Rules	390
48b. The Nuclear Symmetry Character of the Electronic Wave Function	391
48c. Summary of Results Regarding Symmetrical Diatomic Molecules	394
49. Statistical Quantum Mechanics. Systems in Thermodynamic Equilibrium	395
49a. The Fundamental Theorem of Statistical Quantum Mechanics	396
49b. A Simple Application	397
49c. The Boltzmann Distribution Law.	399
49d. Fermi-Dirac and Bose-Einstein Statistics	402
49e. The Rotational and Vibrational Energy of Molecules	405
49f. The Dielectric Constant of a Diatomic Dipole Gas	408
50. The Energy of Activation of Chemical Reactions	412

CHAPTER XV

GENERAL THEORY OF QUANTUM MECHANICS

51. Matrix Mechanics.	416
51a. Matrices and their Relation to Wave Functions. The Rules of Matrix Algebra.	417

CONTENTS

xi

SECTION	PAGE
51b. Diagonal Matrices and Their Physical Interpretation . . .	421
52. The Properties of Angular Momentum.	425
53. The Uncertainty Principle	428
54. Transformation Theory	432

APPENDICES

I. Values of Physical Constants.	439
II. Proof that the Orbit of a Particle Moving in a Central Field Lies in a Plane	440
III. Proof of Orthogonality of Wave Functions Corresponding to Different Energy Levels	441
IV. Orthogonal Curvilinear Coordinate Systems	443
V. The Evaluation of the Mutual Electrostatic Energy of Two Spherically Symmetrical Distributions of Electricity with Exponential Density Functions.	446
VI. Normalization of the Associated Legendre Functions	448
VII. Normalization of the Associated Laguerre Functions.	451
VIII. The Greek Alphabet.	453
INDEX.	455
