CONTENTS

Preface	iii
PART I: An Introduction to Axiomatic Systems	1
1 Logical Systems and Basic Laws of Reasoning	2
1.1 Introduction	2
1.2 The Elements of a Logical System	2
1.3 Inductive and Deductive Reasoning	4
1.4 Logic and Arguments	5
1.5 Basic Forms of Logic	6
1.6 Basic Argument Patterns	10
<i>Supplementary Topics</i>	
Constructions	15
Problems	16
Transformation Geometry	17
2 A Simple Logical System—A Finite Geometry	23
2.1 Introduction	23
2.2 The Initial Undefined Terms and Axioms of the System	23
2.3 Some Theorems of the System	25
2.4 A Fifth Axiom and Some More Theorems	28
2.5 A Final Axiom and Some More Theorems	38
<i>Supplementary Topics</i>	
Constructions	44
Problems	45
Transformation Geometry	46
3 Properties of an Axiomatic System	50
3.1 Introduction	50
3.2 Consistency of a System	50
3.3 Independence of Axioms	56
3.4 Completeness of a System	59
<i>Supplementary Topics</i>	
Constructions	63
Problems	63
Transformation Geometry	64
PART II: An Axiomatic Development of Elementary Geometry	75
4 The Foundations of Plane Geometry	76
4.1 Introduction	76
4.2 Existence and Incidence	76

4.3	Between—An Order Relation	78
4.4	Halflines; Partition and Separation	82
4.5	Segments; An Additional Axiom	86
4.6	Halfplanes	89
4.7	Some Additional Theorems Concerning Existence and Incidence	92
4.8	Convexity	93
	<i>Supplementary Topics</i>	
	Constructions	95
	Problems	95
	Transformation Geometry	96
5	Triangles and Angles—Interiors and Exteriors	102
5.1	Introduction	102
5.2	Triangles—Interiors and Exteriors	102
5.3	Angles—Interiors and Exteriors	107
5.4	Betweenness for Halflines	113
	<i>Supplementary Topics</i>	
	Constructions	115
	Problems	116
	Transformation Geometry	117
6	Congruences and Comparisons	124
6.1	Introduction	124
6.2	Segment Congruences	124
6.3	Angle and Triangle Congruences	126
6.4	Comparison of Segments	135
6.5	Comparison of Angles	138
6.6	Some Additional Theorems Concerning Angle Congruences and Comparisons	139
	<i>Supplementary Topics</i>	
	Constructions	148
	Problems	149
	Transformation Geometry	149
7	Parallel and Perpendicular Lines; Additional Topics Concerning Angles, Triangles, and Segments	159
7.1	Introduction	159
7.2	Parallel Lines	159
7.3	Interior Angles, Exterior Angles, Midpoints, and Bisectors	163
7.4	Perpendicular Lines	169
7.5	Some Additional Theorems Concerning Angles, Triangles, and Segments	173
	<i>Supplementary Topics</i>	
	Constructions	175

Problems	176
Transformation Geometry	176
8 The Foundations of Space Geometry	181
8.1 Introduction	181
8.2 Existence and Incidence	181
8.3 Halfspaces; Partition; Separation; Convexity	184
8.4 Some Additional Theorems Concerning Existence and Incidence	186
<i>Supplementary Topics</i>	
Constructions	186
Problems	187
Transformation Geometry	188
PART III: Some Topics in Euclidean and Non-Euclidean Plane Geometry	195
9 Some Euclidean Geometry of Triangles and Circles	196
9.1 Introduction	196
9.2 Some Theorems Concerning Concurrences in Triangles	196
9.3 The Theorems of Ceva and Menelaus	203
9.4 The Simson Line, the Nine-Point Circle, and the Euler Line	215
<i>Supplementary Topics</i>	
Constructions	224
10 Cross Ratio and Harmonic Sets	226
10.1 Introduction	226
10.2 Cross Ratios of Points and Lines	226
10.3 Harmonic Sets of Points and Lines	234
10.4 Applications of Harmonic Sets	237
<i>Supplementary Topics</i>	
Constructions	245
11 Some Topics from Hyperbolic Geometry	247
11.1 Introduction	247
11.2 Parallels	248
11.3 Trilaterals	277
11.4 Quadrilaterals	292
APPENDICES	313
Appendix 1: Axioms and Theorems of Part II	314
Appendix 2: Some Plane Geometric Constructions	323

Appendix 3: Some Euclidean Theorems	337
Appendix 4: Some Fundamental Locus Theorems	343
Appendix 5: Some Area and Perimeter Formulas	345
Bibliography	347
Index	349
