

CONCEPTS OF PROBABILITY THEORY

PAUL E. PFEIFFER

Department of Mathematical Sciences
Rice University

Second Revised Edition

DOVER PUBLICATIONS, INC.
NEW YORK

Contents

PREFACE iii

Chapter 1. Introduction	1
1-1. <i>Basic Ideas and the Classical Definition</i>	2
1-2. <i>Motivation for a More General Theory</i>	4
Selected References	6
Chapter 2. A Mathematical Model for Probability	7
2-1. <i>In Search of a Model</i>	10
2-2. <i>A Model for Events and Their Occurrence</i>	14
2-3. <i>A Formal Definition of Probability</i>	28
2-4. <i>An Auxiliary Model—Probability as Mass</i>	37
2-5. <i>Conditional Probability</i>	41
2-6. <i>Independence in Probability Theory</i>	54
2-7. <i>Some Techniques for Handling Events</i>	66
2-8. <i>Further Results on Independent Events</i>	81
2-9. <i>Some Comments on Strategy</i>	96
Problems	98
Selected References	106
Chapter 3. Random Variables and Probability Distributions	108
3-1. <i>Random Variables and Events</i>	109
3-2. <i>Random Variables and Mass Distributions</i>	120
3-3. <i>Discrete Random Variables</i>	123

viii Contents

3-4.	<i>Probability Distribution Functions</i>	132
3-5.	<i>Families of Random Variables and Vector-valued Random Variables</i>	145
3-6.	<i>Joint Distribution Functions</i>	151
3-7.	<i>Independent Random Variables</i>	156
3-8.	<i>Functions of Random Variables</i>	162
3-9.	<i>Distributions for Functions of Random Variables</i>	167
3-10.	<i>Almost-sure Relationships</i>	183
	Problems	187
	Selected References	196
 Chapter 4. Sums and Integrals 197		
4-1.	<i>Integrals of Riemann and Lebesgue</i>	198
4-2.	<i>Integral of a Simple Random Variable</i>	203
4-3.	<i>Some Basic Limit Theorems</i>	208
4-4.	<i>Integrable Random Variables</i>	209
4-5.	<i>The Lebesgue-Stieltjes Integral</i>	212
4-6.	<i>Transformation of Integrals</i>	215
	Selected References	218
 Chapter 5. Mathematical Expectation 219		
5-1.	<i>Definition and Fundamental Formulas</i>	220
5-2.	<i>Some Properties of Mathematical Expectation</i>	225
5-3.	<i>The Mean Value of a Random Variable</i>	230
5-4.	<i>Variance and Standard Deviation</i>	234
5-5.	<i>Random Samples and Random Variables</i>	243
5-6.	<i>Probability and Information</i>	245
5-7.	<i>Moment-generating and Characteristic Functions</i>	258
	Problems	264
	Selected References	272
 Chapter 6. Sequences and Sums of Random Variables 274		
6-1.	<i>Law of Large Numbers (Weak Form)</i>	275
6-2.	<i>Bounds on Sums of Independent Random Variables</i>	279
6-3.	<i>Types of Convergence</i>	284
6-4.	<i>The Strong Law of Large Numbers</i>	290
6-5.	<i>The Central Limit Theorem</i>	292
	Problems	294
	Selected References	296
 Chapter 7. Random Processes 298		
7-1.	<i>The General Concept of a Random Process</i>	299
7-2.	<i>Constant Markov Chains</i>	302
7-3.	<i>Increments of Processes; The Poisson Process</i>	319
7-4.	<i>Distribution Functions for Random Processes</i>	323
7-5.	<i>Processes Consisting of Step Functions</i>	325

7-6. <i>Expectations; Correlation and Covariance Functions</i>	330
7-7. <i>Stationary Random Processes</i>	342
7-8. <i>Expectations and Time Averages; Typical Functions</i>	346
7-9. <i>Gaussian Random Processes</i>	353
Problems	357
Selected References	361
Appendixes	364
<i>Appendix A. Some Elements of Combinatorial Analysis</i>	367
<i>Appendix B. Some Topics in Set Theory</i>	375
<i>Appendix C. Measurability of Functions</i>	377
<i>Appendix D. Proofs of Some Theorems</i>	381
<i>Appendix E. Integrals of Complex-valued Random Variables</i>	383
<i>Appendix F. Summary of Properties and Key Theorems</i>
